Julian,

Check the TAPR web page ... one of the people who presented on
spread spectrum systems at the last conference was, I believe,
involved in a company that does just that.

I had the similar problem with ordering with AES.

I ordered the ADI's battery case for AT-600 and I had to send faxes
several times to confirm the order.

seems they are nice about expensive rigs, but not for the orders for
accessories only.

7. REQ:Tube layout on Canadian Marconi MSL5E Radio Receiver

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-01 00:00:00 UTC
From: ifr@dlcwest.com
Message-ID: <35239740.196189608@news.dlcwest.com>
Source record: 174559
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.shortwave,rec.antiques.radio+phono,rec.radio.amateur.misc

Picked up this beaut-anchor recently. All four tubes are in place and the set is operational, but the volume is extremely faint. Tubes check good, but someone's rubbed away the tube designator near one of the tubes and I'm not sure as to what it is supposed to be. Looking from the from of the set, left to right are 6J7, 6K7, 38 & 6F7. The 6J7 is the one in question.

The crystal detector isn't opertional when switched in either and it appears that someone has modified the Crystal Phones jack.

I am looking to buy an original manual and schematic, or atleast a photocopy for the set as well as the two small tuning knobs, one for the Aerial Tuning and another one for Detector Tuning. The larger calibrated dials are intact. The following is from the name plate:

Canadian MARCONI Company
Radio Receiver
Rating: 15 Kc to 1500 Kc
Type: MSL-5E/43370-E Serial: 1400
Pat'd: 1927-44 Spec: 43365-E

Thanks for your time and efforts,
73 de VE5ARC,
Garnet

Thought the following might be of interest to hams reading list traffic. Do not send comments to me as I am just forwarding this on from a smaller maritime list:

Thanks & 73

--------- Begin forwarded message ----------
Hello Everyone,
I have just got this news item from the Net. Has anybody out there heard anything , or got any comments or info, on this Intruder ?

"I have just found out about a French HF radar that is located on the south coast of Puerto Rico that will be operating from March 8th to April 8th on 7.2, 14.2, and 21.3 MHz. They are working informally with a NASA rocket program in Puerto Rico and tried to get the FCC to give them some type of license for this operation. Apparently the State Department was involved as well and they decided to turn it all over to the FCC and NASA. The FCC has said that it cannot give any license for any such operations for NASA or the French to use Amateur bands for the specified transmissions and period of operations. It did grant an informal authorization to proceed on a non-interference basis which means that if an incident of interference occurs, the French group must shut down their operations immediately. I thought you should all know about this since the WPX contest is coming up this weekend and QRM is bad enough without having any extra signals of unknown origin on the bands. The French radar is located at Ft. Allen, Puerto Rico at longitude 18N and latitude 66.5W. It will use radar pulses of 100-200 uS with an interpulse period of 1-2 mS. It will use arrays of stacked yagis which will be beaming 12 degrees west of north (pretty close to right at the US east coast) and a power of 300 watts.

The Point-of-Contact for interference reporting is Mr. Henry Schuett at 216-433-5545 and email at hschuett@lerc.nasa.gov or Felipe (no last name given) at 757-824-1623 and no Email given.

They are then supposed to contact the French and tell them to shut down their operations.

I have not heard them yet myself but another ham in Puerto Rico did hear them we think and independently reported interference to the Navy Communications Direction-Finding site at Sabana Seca, Puerto Rico. He did not know about this operation at the time he heard them and reported them.

It is hoped that nobody will hear them much, but just in case, it looks like the ham spectrum is being protected and the hams have some actions than can be taken.

73 Jim WA3FET/KP4 at Arecibo, Puerto Rico "

A later posting says :-

" I have worked with Hank Schuett for a number of years. He is the NASA
HF RF
Spectrum Manager, and a REAL GOOD GUY. He is also a ham, and will take care of the amateur interests to the greatest degree possible.

My $.02 worth...

He sure made you run out of that hamfest,though. He is going to a domain with about 25 other hams here in Georgia. We need 56k to achieve our mission. You are in our sights.

What is the 20m freq that is like 3950Khz?

BTW, I spoke with my congressman, Ed Pease. If I put a request in
writing to his office that asks for him to contact the FCC, he must
contact the agency and have a response back to me in 10 working days.
If enough of us requested such actions (it must be in writing in order
for him to contact an agency), it might really put some pressure to do
something about the mess. After all, this is an election year!

I have had more trouble with AES and MasterCard and VISA than
anyone else in all of NA. Sometimes it works and sometimes
it don't. Allegedly they won't take orders phoned in from the
USA (I was visiting) on a card whose owner has an out of country
(I hate the word alien) address, for some reason. Nobody else
has refused. The lost the sale of a TS850SAT.

Of course that's what they heard, Burt. What was their expectation? Have you
been painting an inaccurate picture of ham radio in their minds?

Sure, exciting things happen over repeaters--But not moment by moment. Between
times, we fill the gaps with converstations about "the weather, getting coffee,
and other inane topics."

Had they dialed into the local police channels or fire department, it is
unlikely they would have heard a major event going on. Those channels get
pretty boring, too.

By the way, Burt.....what do YOU talk about on the radio?

Yrac

Burtie o' boy, you're just a disgruntled old fart. I had a very nice conversation with you on the W1OJ 10M repeater, several months back, and then we went to 75M where the conversation was also cordial. Then, on the net you tried putting the blame on me for the non-technical content of the QSO. At what point do you accept responsibility for anything you do?

If your students have an unfavorable view of amateur radio, you're the one who exposed them to it. You're the one who is molding those minds into disgruntled young farts. You have probably never led them to any of the positive aspects of amateur radio...you can't see any. I don't see how you can be objective in anything you teach and I feel sorry for any student who gets STUCK with you as their teacher.

>conversations were about the weather, getting coffee and other inane topics.

Sorry the repeater you chose was not interesting to the students. We have one in Raleigh, NC (146.88) which is quite entertaining. A sample of an actual QSO follows:

Ham #1. How come the headlights on your car don't burn out at the same time?
Ham #2. What do you mean?
#1. Well, think about it. When a car is built in a factory, they reach up on the shelf and pull two headlights, from the same manufacturer and lot, and install them in the car. From that point on, the two lights are turned on the same number of hours, are subjected to the same bumps, voltage fluctuations, etc. Why does one need replacing sooner than the other.

[There follows a discussion among five Amateurs on why this might be so. No good conclusion]

"Professor" breaks in. "Good morning, guys. There's something you don't know about headlights, and once I tell you, you will understand why they don't need replaceing at the same time."

Ham #1. Go with it, Professor!

Professor: Auto manufacturers know it would be a disaster if both headlights failed at the same moment, some dark night. So there is an intentional stagger built into the system.

Ham #2. How do they do that, Professor?

Professor: Unknown to most people, there are two versions of every kind of headlight.....you know, a 9002A and a 9002B. The A has a heavier filament than the B version. They way, they won't fail at the same time.

Ham#1. I never heard of such a thing. When I go to the auto parts store for a headlight, they don't ask if I want an A or a B.

Professor: That's because of a Federal regulation which only allows the use of A bulbs as replacements. That way, the stagger is preserved for the life of the vehicle. Only auto manufacturers are allowed to have B versions in inventory.

Ham #2. How can you tell which is the A and the B?

Professor: The A has a heavier filament, as I said. So it always is closest to the battery.

[rest snipped for brevity]

73,
Paul K5PF

Important note: Before you start explaining this to your auto mechanic,
remember today's date: Happy April Fool's Day!

I saw this ad too and also on Ebay auction and I had to wonder if hams in general are that ignorant? My quick answer is, they are not. These bulbs are available from many sources for a fraction of the price and they are most definitely, not rare!!!

>Does anyone know how to re-set the CPU on the Yaesu FT-50R?

mine tells me to press the Knob + MON + Fw button at the same time turning the radio on. that should do it or you can go to Yaesu's web page at www. yaesu.com and ask them if there is another way.

Conversations are only as interesting as you make them.

If you're not participating, you have no need to comment.

If I'm bored by what I'm hearing, I go somewhere else.

Everything is of a different level of interest to everyone.

Hello,

I don't accept the responsibility of insuring my conversations on ham
radio aren't " conversations about the weather, getting coffee and
other inane topics." Somehow the purpose Amateur radio was
misrepresented to the student.

>Now, I wonder where he's been since Saturday? Wonder if
>AOL drop kicked him?

Given the wide reach of his posts, and the fact that his place of employment has become fairly common knowledge, it's possible that the outspoken readers of this NG has taken their fury to his employer, and it is his employer who finally prevailed in bringing sense to this NG. If not, then he should have.

However, persons like Drew are not silenced for long. And he will be back. In all of his selfoutsmarting glory.

Let's just enjoy the peace while it lasts....whatdayathink?

33. List of the rec.radio newsgroups (brief)

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6fs89d$67h@news.Hawaii.Edu>
Source record: 174585
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.digital.misc

```
In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

>
>Ola....can anyone tell me anything at all about how to start up my own
>little pirate radio station????

Sure. Budget for the transmitter, the studio equipment, and a couple of
thousand for legal fees (in case you get caught).

Go on the air and editorialize about the National Association of Broadcasters
push (with the help of the FCC) to crack down on pirate stations.

What will you get after spending your hard-earned money? Well, maybe some fame
among your friends for a while. Then there's the satisfaction that you
actually >>did<< it, maybe without getting caught.

Is it worth it? Each individual must decide for himself.

73,
K5PF

Greetings all. I am just about ready to take my Novice exam (thank
you) and I need to find an nearby VE group if possible. On April 19th
there is an exam in Jamestown. I don't want to have to get that far out.
There are hamfests here in Buffalo every year, but that isn't for another
year. I am student here at UB and I am eager to get on the air.
I would have used some help Q signal, but I don't know them all
that well. If you are a VE in the Buffalo area please drop me a line ASAP
or if you can help.

Hi Gary.I really doubt that we are going to loose 770,000 U.S. amateurs in the next 20 years. And what about world wide? Last count was something like 3 million wasn't it? (Hi Hi)

> It is, for the most part, a retired citizen's pass
> time with an occasional influx of agressive CON Testers on weekends.

I hear activity on both hf and vhf every day from folks of all walks of life and of all ages. I don't know about your area but there are a couple of repeaters here that have quite a few active younger hams. In fact I would say there are more active young hams in the area now then when I first got my ticket in 1962.

And what is wrong with retired people passing time with ham radio. To me that is something to look forward to. Speaking of contest operators, were you on last weekend? It was wall to wall hams on just about every band. Heck I find it fun to work the contests for a bit just to see what contacts I can make running 100 watts to a dipole. But, I am glad we don't have to put up with that kind of crowding every weekend.

> Most of 75 meters is taken up with low I.Q. ignoramouses spouting
> diatribes on religion and others who are just plain offensive and
> vulgar.
>

There were operators just like them over 35 years ago when I got my novice ticket. Don't just sit and listen to them. Get on the air and start a few QSOs that show the positive side of the hobby. Get involved with organizations that are pushing for rule enforcement to get the illegal operators off of the air.

> Young folks have cell-U-lars, Inter-Net to keep them quite happy.
> Who-the-heck wants to be a HAM anymore?

From the number of young folks at the VE exam I was at a few weeks ago it seems like a fair number want to be hams. There were even young people taking the dreaded code test. Don't just fret about it. Look into being an Elmer to help bring new hams into the ranks.

> Who gives a flyin- F about talking to Europe with 30 to 40 percent
> of the conversation eaten by static?

I don't know about flying letters of the alphabet, but talking to Europe with 30 to 40 percent static beats the heck out of sending or receiving e-mail from Europe any day. What the heck fun would hf be if every contact was 5 by and 20 over S 9. It would be boring, and have about as much excitement and challenge as channel surfing with your cable tv.

> Technology has passed amateur radio
> right on by.

Maybe you could elaborate on that one for me. I have a new hf radio with DSP features that go pretty far on getting rid of a lot of that static problem. I have been able to pull stations that are below the noise level. This radio also has a DSP beat cancel feature that can be used to get rid of a carrier from someone tuning up or one of them wonderful (not) 40 meter broadcast stations.

Check out the new CCD camera set up that just came out. It can be used with an ht to send video stills with very little set up time. How about High Speed CW meteor scatter where you boost the speed of a cw message up to 1200 wpm or more and send it as a "ping" to to be captured by a receiving station on a computer or tape unit to be slowed back down to something you can decode. Fractional second QSOs. NEAT STUFF.

The old modes have been enhanced by applications of new technology and new modes are continuing to emerge as technology changes.

> And for the record, with the FCC so lax on enforcement.

Once again, don't just sit there and type. Get involved with efforts of the organizations that are working to get the FCC to do more enforcement.

> a lot of
> stuff is now bootleg

Get on the air and you can talk right over the bootleggers....

> not to mention the huge increases in high pwer
> RTTY and broadcasting intruding into amateur spectrum.

The broadcasters have always been there. But you can use some of the new technology to talk around them.

> Its- bye-bye amateur radio..

Maybe for you it is Gary and that is sad. Yes, it is sometimes discouraging to listen to some of the garbage on the air and to read about it on the newsgroups. It gets to all of us at times. From the sounds of it you have been a ham for a long time. If so, you know what a rewarding hobby this can be. It would be a shame to quit something that has given you years of enjoyment.

> and nothing can stop the trend. IMHO

Yes Gary a lot of things can stop the trend. You and me are just two of those things.

> W1IT and somewhat saddened ham-op

> Where would the Bucks ever come from to bring satellites into the
> service? 3D still hasn't made it after.. how many years of R & D.

There are birds up there now we can work, and even though 3D has been set back a couple of times it is still alive and kicking.

: > things reverse course very shortly, it's over for us.

: The daily chaos on 20 and 75 is limited to probably less than 40 individuals who
: perpetuate the situation, are you telling me that this VERY select group will be
: the demise of our hobby? Thats laughable, is it the foul language or jamming? There
: is more than enough foul language to be found on the internet along with email
: bombs and the like. Pornography, etc etc.

: I don't hear ANYONE ranting about how we had better change the INTERNET now or it's
: going away! Why do these comments seem to apply only to amateur radio?

: Tim, ka8ddz

Well, if you really wanta know... the right to use specific frequencies
comes at the cost of persuading the non-ham world that those who use
the spectrum do so for some productive (or at least partially) reason.
There are other non- amateur interests who would like the spectrum
if they could get it.

Inter-Net a totally different animal. People pay to use it..
The only thing driving it is MONEY. Its not free.

It grows because it makes money.. its band-width will be driven
by money and that come where there is demand.

At QRP power levels, I'd suspect interference through the power lines. Try transmitting into a dummy load. If you still get TVI, try a power line filter. Could you borrow another rig to try from your location? You might have some sort of major problem with your rig. The ARRL RFI book is great -- check it out. You might also subscribe to the RFI e-mail reflector. Ed Hare, the editor of the ARRL RFI book, is a regular contributor. Good luck -- here's the info on the reflector:

> To subscribe to the group, send a message to rfi-request@contesting.com

To all radio amateurs

SB QST ARL ARLB024
ARLB024 Section Manager Recall Election Results

Members of the New York City-Long Island Section have recalled
Section Manager Leonard Buonaiuto, KE2LE, in a recall election.
Today, the committee of tellers counted 699 yes votes and 347 no
votes in answer to the single question on the ballot, should the
Section Manager be recalled, yes or no. George Tranos, N2GA, has
been appointed to complete the remainder of the term, which runs
until January 1, 1999. The appointment is effective today. Tranos
is immediate past president of LIMARC, an ARRL Life Member and
Assistant Director. The first call for nominations in the regular
Section Manager election will appear in the July 1998 issue of QST.

ARLB023 Ham radio eases tornado recovery in Minnesota

ZCZC AG23
QST de W1AW
ARRL Bulletin 23 ARLB023
From ARRL Headquarters
Newington CT April 2, 1998
To all radio amateurs

SB QST ARL ARLB023
ARLB023 Ham radio eases tornado recovery in Minnesota

Ham radio operators from across Minnesota have been providing a link with the outside world this week after tornadoes struck two towns in the southern part of the state. Tornadoes flattened Comfrey, a farm community of about 500, and badly damaged the City of St Peter, population 9000 and the home of Gustavus Adolphus College. Electricity and telephone service were knocked out by the storm on March 29. At least two people were killed.

For Minnesota Section Manager Randy ''Max'' Wendel, N0FKU, this was more than a disaster that required the helping hand of ham radio. St Peter was his hometown, and the place where his parents still lived. Wendel and Minnesota SEC Gary Peterson, N0ZOD were among dozens of ARES members who responded.

Wendel and Peterson alerted other ARES members to be prepared to assist with communication, then headed for St Peter. ARES members from Rochester and the nearby Mankato area were among the others who turned out. Wendel himself arrived in St Peter after nightfall, using his ARES identification to get past state police barricades. Wendel found his parents safe and their home damaged. Others, including their neighbors, found themselves suddenly homeless.

Wendel said hams already had situated themselves at key locations, including the Nicollet County Emergency Operations Center, a shelter for victims, and at a sports arena. The ARES team set up an emergency base station at Gustavus Adolphus College. While most students were out of town for spring break, 28 students remained on campus and had no contact with the outside world.

During the next day or so after the tornado struck, ham radio was the only communication out of the city and the primary means to coordinate supplies into the city from the Red Cross in Mankato to

the shelters in St Peter. The morning after the tornado, the Salvation Army arrived to distribute food. Hams provided logistical support for that effort as well. Other hams shadowed disaster assessment officials who went door to door throughout the city or handled net control duties at the EOC. Still others simply made themselves available as needed to cooperate in the recovery effort.

With typical ham ingenuity, Dave Kleindl, KA0BFP, scrounged enough materials to construct a temporary dipole to put a local broadcast station back on the air after its towers had been downed in the storm. With help from other hams, Kleindl also got a generator to a water tower that was still standing and reactivated the local VHF/UHF amateur and public safety repeaters.

''This event once again set a clear example of the importance of Amateur Radio during an emergency,'' Wendel said. Both he and Peterson stressed the importance of planning. Fortunately, the local government officials and agencies were aware of Amateur Radio as a resource. ''When it comes to the unexpected, there is no time to explain who we are and why and how we can help,'' he added.

Wendel said that snow was falling in the stricken area on April 1. He expected ham radio involvement to end by the weekend as normal communication systems are restored.

>His employer should have nothing to do with it. He's a turd, but it's
>nothing his boss should worry about.

He is a public figure, who represents his radio station....If you do not think that an employer would think his behaviour relevant when it the call letters of his radio station are dragged into the fray, guess again. The first letter to his boss about what happens here will get immediate attention.

Remember he is living in a 'perception is reality' universe in broadcasting. Perception of the public of one of its disc jockeys can strongly impact a radio stations position in a market place. One poster here, gets a diary in Drew's ADI, and his station takes a hit that it may not recover from for more than a year, and there is no Program Director, or General Manager who does not understand that. With the scant number of diaries distributed during a sweep, and as small as his market is, one diary could have a huge effect.

Yes, he IS a turd, but it IS something that his employer will worry about, whether he should or not.

Hi Burt,
I have been in ham radio for many, many years, and yes, sometimes
the QSO's can get rather trivial, but there are also many very
interesting conversations. Let's face it, every conversation is not
earth-shaking in life, and in normal everyday chat, we talk about
things that would be boring to others. I don't always care to engage
in rocket-scientist conversations. Take care and 73's...DanOn Tue, 31

Hi there
For the full specs, a mini review and all the known mods for this fine radio, go to a temporary web page I have set up. I want to sell this radio and people are allways asking a lot of questions about the radio. I try to answer them all on this web page. If you want to buy the radio, which is brand new and comes with a filtered cigarette lighter power cable, speaker microphone, warranty card and instruction manual, the asking price is $300. U.S. The retail value at HRO is a little over $400. U.S.

No hardware mod has been done on the radio. I am selling because I need money to buy a new hf rig. Contact me by email if interested.

Web page for info is http://207.35.13.100\ham\index.htm

My email is morinm@csgoeland.qc.ca

The American incentive scheme seems particularly daft to those of us in
the rest of the world, as we try to remember what class someone is
(given all the exceptions in the callsign structures) and then work out
which sections of which bands he's allowed in. It all looks like
unnecessary restriction.
Artificial incentives are never as good as natural ones.

On IRC (Internet Relay Chat) via an EfNet server you can go to #hamradio
If you are using MIRC there is a listing of EfNet servers you can try.

Oh BTW On IRC we call them channels not rooms. Rooms are for Mudders

You can go to the FCC site and it explains all the ways to do it. Essence is, you can pass the testing and then apply as a former license holder to get back your call, provided someone hasn't already gotten it. You would have to pay the vanity fee, of course.

You have to have the class of license that fits the call and obviously, you had a novice call, so you are in, if you pass.

>someone. I don't agree. This is a public forum with no set of rules,
Not all employers care...only those in the public eye. And the matter is not about the newsgroup. Or its rules and structure. The matter is about the perception of his behaviour here. And some of the wildly inflammatory things he has said, here that could reflect on his career and his employer.
>Can you imagine someon
>losing their job over something as usless as a Newsgroup?

Yes, I can...In fact I know of people who have lost their jobs for a lot less. Some of the horror stories that came out of the Bell System before divestiture would curl your hair.

I'm not saying that its right...I'm not saying that its the way it should be. I"m saying that, frequently, its the way it IS. Witness the number of disclaimer signatures on these very postings if you think I am alone in these beliefs.

Don't forget, Jordon. An HT makes a great mobile rig. Add a speaker mike and an external antenna. Hook up the the vehicle's power supply, through a filter. Later, if you need it, add a dual band amplifier. You end up with a 30 watt mobile rig, but you retain the portable characteristics of the HT to use at hamfests, or on other Amateur activities (Search for lost child, helping at your town's parade, etc.)

I have been using this system for many years and it works quite well.

>He is a public figure, who represents his radio station...

Thanks to some "behind the scenes" e-mails and a conference call or two, we were able to get the unfortunate situation from last week resolved to everyone's satisfaction (we thought).

If anyone has questions about this, feel free to e-mail me, giving an address to which I can respond. If you were involved in last week's exchange of messages, an attempt was made to contact you. If you are not in the loop, it is because your screen identification is not "clean" and your mail has been returned.

Far be it for me to defend Spew, but here goes...

In article <19980402022905OO.VAA22190@ladder03.news.aol.com>,
Peter Maus <petermaus@aol.com> wrote:

>He is a public figure, who represents his radio station....If you do not think
>that an employer would think his behaviour relevant when it the call letters of
>his radio station are dragged into the fray, guess again.

I'm sorry, Peter, but I disagree. Are you a "public figure"? If I were to
discover who your employer is, is it acceptable for me to write to them and
complain about your USENET postings?

Despite the fact that Spew posts rubbish, the fact remains that he is
entitled to his opinions, however racist or homophobic they happen to be.
His comments in this forum are nothing less than his own opinions, which
he is, the last I looked, entitled to under the Constitution.

While true that he is a "public figure", when compared against you or I,
he is not a "public figure" when compared against others, such as our
elected officials. Unless he publically identifies his employer and
indicates he is speaking on behalf of his employer, you must take his
word as nothing more than his own opinions, as if he told you them at a
picnic. His racist, homophobic postings have little bearing on his
job of spinning records on a play-list at a 2-bit radio station in the
middle of Kansas.

From: n2ey@aol.com
Message-ID: <19980402131735O1.IAA24711@ladder03.news.aol.com>
Source record: 174628

Hello Ted,

Both code tutors and software packages are good ways of learning the code, although most software packages havemore features and are often less expensive. Some of the older software packages are now shareware.

The real deciding point is how easily you can "access the practice", that is, how convenient is the training device to your schedule? If you currently have plenty of computer time available every day, a software package may be your best bet. But if you have to share the machine, and are often away from the computer, a "go-anywhere" code tutor with headphones will let you practice whenever and wherever you are.

To avoid code speed "plateaus", it's best to learn using the "Farnsworth" method. This method is simply a way of sending slow code by sending the letters at a relatively high speed, with exaggerated spacing. For example, if the letter S is sent at 5 wpm, it sounds like "diiit.......diiit.......diiiit" and one can make the mistake of learning it as "three dits" or three seperate sounds. But at 20 wpm, it sounds like "dididit" - one sound that is learned as a whole. Speeding up is done by reducing the space between letters. Almost all tutors and software packages have Farnsworth code as an option.

Good luck!

73 de Jim, N2EY

>
>Despite the fact that Spew posts rubbish, the fact remains that he is
>entitled to his opinions, however racist or homophobic they happen to be.
>His comments in this forum are nothing less than his own opinions, which
>he is, the last I looked, entitled to under the Constitution.

Actually, it has happened. The public seeks the most effective pressure point to make its point. I my case, no complaint was made, but several of my posts to a BBS wound up in edited form in my manager's mailbox.

Drew is entitled to his opinions, you are correct. Further, I 'm not saying that he is not entitled to spew here. What I am saying is that if he does, the public may attack his pressure point, and right or wrong, they may prevail. In a court of law, probably not. But a manager's office is not a court of law...and the only standards of evidence that apply are those at his whim at the moment.

> Unless he publically identifies his employer and
>indicates he is speaking on behalf of his employer, you must take his
>word as nothing more than his own opinions, as if he told you them at a
>picnic.

His employer has been identified. Though not by himself. And opinions or not, he can be held to answer for them at the office whether they have bearing on his job of spinning records or not. They may have bearing on his perceptions and his values in the minds of the public in these fora. And his radio station will most certainly take a look at that.

My argument here is not a point of order, or Constitutional Law. My argument here is more a statement that things often work this way. Not fair. Not, in many cases, even legal. But it does happen. And it does happen without redress.

Hate to say it , but amateur radio, as we know it will be DEAD in less
than twenty years. It is, for the most part, a retired citizen's pass
time with an occasional influx of agressive CON Testers on weekends.

Most of 75 meters is taken up with low I.Q. ignoramouses spouting
diatribes on religion and others who are just plain offensive and
vulgar.

Young folks have cell-U-lars, Inter-Net to keep them quite happy.
Who-the-heck wants to be a HAM anymore?

Who gives a flyin- F about talking to Europe with 30 to 40 percent
of the conversation eaten by static? Technology has passed amateur radio
right on by.

And for the record, with the FCC so lax on enforcement.. a lot of
stuff is now bootleg not to mention the huge increases in high pwer
RTTY and broadcasting intruding into amateur spectrum.

Its- bye-bye amateur radio.. and nothing can stop the trend. IMHO

W1IT and somewhat saddened ham-op

Where would the Bucks ever come from to bring satellites into the
service? 3D still hasn't made it after.. how many years of R & D.

Not sure if I posted this already, but... I have 2 MC-50 desk mics for sale at $50/both. One mic is in great condition, works great, other mic looks rough, base is great, works ok but has hum... inside base is evidence of many rewirings, and I believe the audio leads being reversed is the only problem. Please email if interested! Buyer ships COD/CONUS or prepay.
thanks,
Randy

What difference does it make to you?
As for myself, I operate in those parts of the bands where I am
licensed (all) and talk to anyother ham who is there. I do not look up
their license and try to determine if they should be there. I have no
idea how Brittish hams are licensed and do not care, just as long as I
can contact you and you will send me a QSL card for my efforts.

Hello All,

I live in a very old part of town, houses are 100+ years old. I'm not sure if that has anything to do with my problem but still. I cause TVI.. I have my Rig turned down to 2.5 watts running into a 15 Meter dipole with swr 1.1 to 1... But still on CW it pulls the picture from my TV, and everyone around me. SSB I can't even use because it destorys everything...
I don't have a low pass filter, looking for advice on which one I should get, I may or may not need to work on my ground (would that affect TVI?), I can want to use a tuner so I can have multi bands on one dipole, hope to use a 40 meter dipole for 40-10...I never plan on running more than 5 watts out...
Radio is a TenTec Argo 556, powered by a Pyramid Phase III 12 Amp Power supply, Tuner is a MFJ 949C, but I cause TVI with out the tuner in line...
I live in an area that is filled with InterMod on vhf, I have all the tv, radio, pager, wireless cable, business band and whatever is radio, towers within a mile of my house.
I have to fix it on my end, the people that live around me 100% will not do anything to their end, they say if I don't transmit they don't get the TVI, which I'm okay with that once I'm 100% sure I'm doing everything I can on my end....

Thanks for any advice...

73,

Jim -- KC4SMH

Frankly, sounds like an attitude problem Gary. With about
400 QSOs under my belt (admittedly not very many) I sure don't
understand what you're talking about. I'm mostly CW, so perhaps
that's where the difference lies, but by far I only encounter
courtesy and good times on the HF bands. I'd say the mean age
of the ops I work are about my age, mid-40's, I work 'em
as young as 12, as old as 95.

For a few hundred bux and some wire I get a lot of thrill working
on different bands under different propagation conditions static
or no. Sometimes working that QRP station across the country who's
using a 2 W radio is just as much fun as working 100 W or more
stations in NZ, Brazil, or even Japan. Now that I have a quad up
the static is down, the sigs are stronger both ways.

My point is I've just scratched the surface of ham radio, and with
minimal investment and relatively low technology am having a blast.
I suggest to you that you are tired of the hobby because you are
no longer challenging yourself to explore more. The guys dropping
out from VHF are predominantly those who aren't even challenging
themselves enough to pass a measly 5 WPM multiple-choice code test
so they can enjoy the full flavor of ham radio on the HF bands.

I'm sure not trying to start a no-code/know-code thread here, just
trying to point out that the hobby is what you make of it, just
like the rest of life. If the hobby "dies" it will not be because
there isn't enough to explore and enjoy in it.

'nuff said.

ADI / PRYME SALES BULLITEN
2 April 1998

PREMIER COMMUNIATIONS ANNOUNCES TWIN 6 METER / 220 HANDHELDS

Amateur radio manufacturer PREMIER Communications, the maker's of ADI Radios, PREMIER Speakers Mics, and PRYME Battery Packs, announced two new handheld radios today: one for the 6 Meter amateur band and the other for the 222 MHz band.

These "twin" HTs feature the same cosmetics. They are small, compact units similar in size to the Yaesu FT-50RD. Each unit features a full 5 watts out with the supplied NiCad battery pack, 40 memory channels, and built-in CTCSS encode and decode.

The model number of the 6 Meter handheld is the "PR-52" and the 1.25 Meter unit is "PR-222." Both units will be available as soon as they become FCC type accepted, sometime around the end of May. The units may not be offered for sale or lease until after the approval of the FCC has been obtained.

The radios will be marketed under PREMIER's new "PRYME Radio Products" brand name. No price range has been announced.

For more information see the PREMIER Communications website at <http://www.adi-radio.com>.

A low pass on your output couldn't hurt. They don't rely on ground, so that's not a problem.

Is it on specific channels only, or many? I'm wondering wether you have a problem in the rig outputting excessive harmonics, or something else is going on.

You want that lowpass to start rolling off above the highest freq you will use, but it won't help a lot on low VHF channels. They are rated with a cutoff freq (3dB down) and some number of dB per octave.. Say your cutoff is 30 MHz, ok, at that point, the output is attenuated 3dB. At 15 MHz, we might expect 1.5dB(!) At 60 MHz we look at the rolloff number, maybe 12dB, so we would expect 15dB attenuation (3 at cutoff, + 12). So in the low VHF you don't get a lot of help from a lowpass.

Once you get up to 180 or so, we are 6 octaves out, and you are getting 63 dB+ (hopefully) attenuation, and some real benifits.

For problems in low VHF (cable converter outputs are on ch 3 or ch 4) then you can hopefully trap it out with a series resonant notch filter, or shorted coax stub. This is a piece of coax 1/4 wavelength at the interfering freq, multiplied by the coax velocity factor, usually .66, "tee" connected to the line, and open on the end. They aren't very broadbanded, so cut long, and tweak it down.

Series resonant LC traps are smaller, but maybe harder for you to get parts for.

A ferrite on your feedline at the transmitter end, and another on the antenna end may help too, trying to keep any energy off the shield.

Good luck!

Ham radio is people, and you're going to run into a few losers
here and there. On the internet chat rooms you're not going
to find much better. Actually, I think it's much worse on
the internet than it is on ham radio.

Sorry I'm having a problem answering Bob - we'll try it again - darn url
link won't work properly for some reason...

Anyway - thanks for gettng 4! RadioRESTs - you must like portable gear! :)
Our heartfelt gratitude...

Those looking for us, can find our web site at:

http://www.geocities.com/eureka/enterprises/3830

I haven't advertised RadioREST on the web very much (hardly at all) because,
as you know, we distribute them primarily at hamfests, swapmeets,
etc...sorry for being hard to find...We'll try and keep a "greater presence"
in the groups from now on...

Well, let's see if this message "took"... :)

Take care, and 73's

John (WA6SPA)
NKS - Hams Helping Hams
St. Louis, Mo.

Posted this in a prev. msg... but it was kinda lost in the questions..
Have Motorola headset/mic, behind the head for use with cap, etc, like the
'Nascar' guys use except black. Dynamic mic element. Could use earpads,
these are a bit too mushy.. has top velcro adj. strap and coiled cord. Boom
adjusts in/out, hinged halfway and mic pivots. works great! it's a 4pin
plug now, but have the factory barrel plug (4contact) desoldered, not cut.
It's model NMN6064A SP04 if u wud like to look it up at Motorola's website
or elsewhere. List new: $500 Priced at $90/firm/uship Please email if
interested!
thanks!
Randy

: http://www.notcode.org = http://www.noballs.org

As for giving (and I do mean giving) H.F. to NOCODERS, I think that
may have already happened. A lota folks really didn't copy effectively
at the code exam, passed anyway and quite frankly, never used cw.

But.. at least they made an effort at it. You can't save a dying old
mare by putting more riders on her back.
All you would get is more chaos and band end for end bedlam.
The HF spectrum is so tiny compared with UHF and beyond.. and it is this
very (unused) spectrum that the RF commercials want. READ SCIENTIFIC
AMERICAN this month Re: The Wireless Revolution.

As for the so called young folks.. heck.. they're not interested in
amateur radio anyhow. Too much cheap and easy.. cell phone inter-net
etc.. what they want they BUY. They don't need to earn it. That's old
fashioned.

As for CW.. well ofcourse its a lot easier to just go SSB, but heck
hasn't ssb been around 40 or more years? Its obsolete too, if you're
going to point fingers at cw, you might as well say HF is obsolete.
So.. that said.. all the front line technology that really matters
will be using UHF and beyond.. especially satellites. Or are satellites
just too high tech for the wanta-be HF crowd?

W1IT

So could I say, for the watta-bes high tech is too technical and cw just
too hard or too much bother to learn? This is probably a lot closer

to the truth than a lotta people wish to admit.

Suggestion
1st: Go to your local ham radio store and buy the best low pass filer
then have. Unfortunately, price defines quality. You want as many
filter sections, the the filter, as you can get.
Connect filter as close to transmitter/transceiver as possible.

2nd: Try staying away from hf bands of which their harmonics lie in
the channel used by your local cable company to feed your tv set, eg
channel 3 or 4.

3rd: If the interference is getting into your cable system, before the
cable converter, the problem could be in the cable system, then it
'may' be the cable companies fault. Don't jump on their tail untill
you can prove, and demonstrate, that one.

Hi Jim, Can you be a little more specific on the interference? What does it look like on the tv? What channels does it come in on? Are the sets on cable or receiving off the air broadcasts? Do you have a dummy load? If so, what happens when you use it? Do you still get into the televisions? Lots of good advise so far but I would suggest you try to narrow it down to a specific cause before you try the shotgun approach.

Having spent years in the Far East, I have found that most Asians, when
speaking english, have trouble pronouncing "L's" which come out sounding
like an "R." For example, they often say "gasoRine."
But never have I seen them misspell a word which they might
mispronounce.

128. President Stafford's response to Burt K1OIK

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-03 00:00:00 UTC
From: Burt <burt@innocent.com>
Message-ID: <6g4221$i9e$1@as1000.javanet.com>

Mr. Stafford, I respect your position as President of the ARRL but frankly based on what is written below, cut the crap. I have never been involved in any VE session in which there was any question of "irregularity." I have already sent my letter to several newspapers (and a few have said they will or have published) but many more will follow. If I am reinstated, I will stop.
Burt Fisher

I am looking for a Geochron world time map clock. Its the large backlighted moving map display that shows real-time and daylight/darkness terminator displays for the world. Prefer one of the higher end models but will consider any that are available on the used market. I am an immediate BUYER.

Please e-mail, or call anytime; 561-883-1408.

SB PROP @ ARL $ARLP014
ARLP014 Propagation de K7VVV

ZCZC AP14
QST de W1AW
Propagation Forecast Bulletin 14 ARLP014
From Tad Cook, K7VVV
Seattle, WA April 3, 1998
To all radio amateurs

SB PROP ARL ARLP014
ARLP014 Propagation de K7VVV

Solar activity has dropped back a bit, but still remains fairly high. We have reached both the end of a month and the first quarter of 1998, and the average solar flux trend looks good. The last three quarters of 1997 had an average solar flux of 73.6, 82 and 94.3 and solar flux for the first quarter of 1998 averaged 98.8. Average solar flux for January and February was 93.4 for each month and for March it was 109.1.

For April look for solar flux to rise over the next week, peaking around 125 on April 9 and 10, then dropping back below 110 by April 18, then peaking below 120 around April 22 and 23. Active geomagnetic conditions may result in disturbed propagation around April 7 and again around April 17.

The author welcomes questions or comments via email at tad@ssc.com.

On a personal note, on Saturday, April 4 the author of this bulletin is ending a lifelong bachelorhood. A few weeks later while I'm on a honeymoon on Maui, KH6BZF will be filling in and writing ARLP017.

Sunspot Numbers for March 26 through April 1 were 77, 80, 81, 82, 66, 71 and 90 with a mean of 78.1. 10.7 cm flux was 110, 108.1, 103.9, 100.3, 107.5, 108.1 and 105.7, with a mean of 106.2, and estimated planetary A indices were 10, 13, 14, 17, 10, 10, and 5, with a mean of 11.3.

```
SB QST @ ARL $ARLB025
ARLB025 Vanity fee to drop drastically

ZCZC AG25
QST de W1AW
ARRL Bulletin 25 ARLB025
From ARRL Headquarters
Newington CT April 3, 1998
To all radio amateurs

SB QST ARL ARLB025
ARLB025 Vanity fee to drop drastically

The fee to obtain an Amateur Radio vanity call sign would drop
drastically under the FCC's proposed fiscal year 1998 fee schedule.
If adopted, the new fee will be $12.90 for the ten-year term,
payable at the time of application for a new, renewal or reinstated
license.

The new fee is contained in an FCC Notice of Proposed Rulemaking, MD
Docket 98-36, Assessment and Collection of Regulatory Fees for
Fiscal Year 1998, released March 25.

The current vanity call sign fee is $50.00 for the ten-year term.
The FCC says it has no plans to refund the difference between the
current fee and the new fee for applicants who submit applications
before implementation of the FY 1998 fee schedule.

The FCC has calculated the new fee based on an expected 10,000
applicants during FY 1998.

The FCC says it will announce the effective date for the new fee
either in the Report and Order that terminates the fee schedule
rulemaking proposal or by a public notice.

Heehee - when I got licensed 22 years ago, folks such as yourself were saying the same thing. Who'd guess that the number of licensees would triple in that short time span? My old radio history books quote amateurs crying the same doom and gloom back in the 1920s.

> It is, for the most part, a retired citizen's pass
> time

Not here in Hawaii. Go to any meeting and you'll see folks of all ages.

>with an occasional influx of agressive CON Testers on weekends.

The bands are open for business 168 hours per week. The contest folks are on less than 15% of that time. But don't forget, those guys are pushing their very efficient stations and themselves to the limit each weekend - very good training for emergency communicators.

> Most of 75 meters is taken up with low I.Q. ignoramouses spouting
> diatribes on religion and others who are just plain offensive and
> vulgar.

Try 80 CW. Try 160 or 30. Or get on 75 yourself and send "CQ for a chess game" or CQ for an astronomy discussion" or whatever your interests are. The QSOs are only as interesting as *you* make them.

> Young folks have cell-U-lars, Inter-Net to keep them quite happy.
> Who-the-heck wants to be a HAM anymore?

To get the answer, go to the testing sessions as ask the young folks who show up why they want to be amateurs.

> Who gives a flyin- F about talking to Europe with 30 to 40 percent
> of the conversation eaten by static? Technology has passed amateur radio
> right on by.

You obviously don't build your own gear, for if you did, you'd already know the answer. When I can get on the air using gear I've slapped together myself and work someone thousands of miles away, the reward is greater than words can describe.

> Its- bye-bye amateur radio.. and nothing can stop the trend. IMHO

I thought I read that same gloomy prediction in QST some 30 years ago...

Enjoy the weekend!

Then why, Burt, did Stafford refer to irregularities? And what's your idea of why you were suspended? His letter indicated quite plainly that irregularities were the issue.....

139. Re: President Stafford's response to Burt K1OIK

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-04 00:00:00 UTC

Source record: 174493

Reading literally, and without interpretation, the President's message clearly states that irregularities are the issue. That does not, however mean that irregularities were present. It only means that an issue has been made of irregularities. The FCC, therefore will conduct its investigation, and determine whether irregularities in a given session were in fact involved in the session, and conclude accordingly.

Both of you need to read what is being said, and understand the stated message. Burt's guilt or innocence is not foregone either way. The President has made no accusation, and the FCC is looking into the matter, as dictated by procedure. The suspension is SOP. What IS clear, is that someone HAS accused of irregularities, and that is what has triggered the automatic suspension and inquiry.

Let the process determine its conclusion. Protracted debate, and Mr Fisher's noise is helping neither the investigation to conclude the truth, nor his position with the ARRL VE program.

If it is not determined that Mr Fisher is guilty of wrongdoing, then redress is in order against the party by whom the charges were made.

It may not seem like a fair system...but in truth it is. The degree to which anyone may have been wronged is dependent on the conclusion to which the FCC investigators come.

Again, until the investigation is concluded, no one has taken a hit. Accusations, and insinuation, perhaps. However, suspension of active duty in the face of investigation is stock in trade in many areas of life.

I am aware of the current sentiment in the hobby toward ARRL. And I understand, if not condone, many of their activities. However, allowing the FCC to investigate, while they suspend the active status of Mr Fisher, regardless of what we personally believe his value to the hobby to be, is simply procedure.

The existence of any irregularity is the issue under investigation. Conclusions either way, and their implications are premature.

On the more personal issues of trust in the regulatory bodies and their impact upon your participation in the hobby or mine, you raise valid concerns. I do not believe there is a totalitarian state of mind in the future of the hobby, regardless of who oversees policy. However, as has been the history of this country, vigilance is always warranted. The rights of the individual must be protected from both the authority, and the majority.
Mr Fisher, may be on the short end of raw deal here. But that has yet to be determined. Suspend judgement on both the motives and the guilt on either side until the investigation is concluded. And at that time, either accept the conclusion of the investigating persons, or appeal them based on unpresented evidence. But to debate this now, raw deal or not, and to do it in a vitriolic way, will neither help Mr Fisher's cause, nor our own as individuals in the future of this hobby.
Your outrage is noted. And it is further, understood.

I can understand that but get this, in my case there is no accusation, try
and find where President Stafford has made any connection to anything
whatsoever. No group I have EVER been associated with had had ANY problem
whatsoever.

>
> I am aware of the current sentiment in the hobby toward ARRL. And I

No one is investigating anything, there was no problem to investigate.
President Stafford's comment is all BS. If there is a problem, what is it?
Where is it? Who is involved?

> Mr Fisher, may be on the short end of raw deal here. But that has
yet
> to be determined.

I was "fired" because my views on the ARRL were not appreciated by the ARRL,
that is the only reason.

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. A naked chic
2. An actual picture of Burt on the throne.
3. The writings of me and others on ham radio, hear a typical ham contact.
4. The warm side of K1OIK, hear me speak, see me with famous people.
5. A test for your SVGA monitor
6. Pictures of me and my family.
7. A Nazi connection in ham radio?
8. See now the future of ham radio.

Why? His letter was merely a statement of UNRELATED fact.
Like if I said Incest is bad in a reply to you.

There was no charge for him to base his statement on.
Please visit my World Wide Web Site, you have never seen a page like it.

No it does not, read his statement, he makes no connection to me or anyone at all. He merely states some facts IF there was a problem. He never states what the problem is plus rememember, no group I have been associated with has had ANY problem and I cannot give tests by my self

It only means that an issue has been made of
> irregularities. The FCC, therefore will conduct its investigation, and
> determine whether irregularities in a given session were in fact involved in
> the session, and conclude accordingly.

There will be no investigation, that is like saying there will be an investigation of the murder of President Stafford when he is not dead or even harmed.

and the FCC is looking into the matter, as dictated by
> procedure. The suspension is SOP. What IS clear, is that someone HAS
accused> of irregularities, and that is what has triggered the automatic
suspension and> inquiry.

No one has accused me of anything. Go to my home page and read the letters he wrote. There is no accusation there whatsoever.

>
> Let the process determine its conclusion.

There is no process to conclude.

> If it is not determined that Mr Fisher is guilty of wrongdoing,
then> redress is in order against the party by whom the charges were made.

There can be no redress as there is no accuser, you got this yet?

> to which anyone may have been wronged is dependent on the conclusion to
which
> the FCC investigators come.

There will be no conclusion as there is no investigation.

Yes. At 45 degrees, the antenna is a closer match for 52 ohm coax. However, 90 degrees works pretty well. I recommend you go for the angle which is the strongest, physically. The match is pretty close, either way.

45 degrees might possibly give you a lower radiation angle, which would be better for working locals and DX. Again, however, the 90 degree angle will do a good job, also.

For more information, see the ARRL Antenna Handbook, or similar publications.

ZZZZzzzzZZZZZzzzzZZZZZzzz Huh??? what????

Did I miss something that really matters in the scheme of things?? Guess not

Seems Fisher can't even read now, let alone fix electronics. Looks like he has to petition the FCC, not the ARRL. Thta's great. Given his record of lies and slanders, this should at least get him an audience before Kenneth Starr. Go back to the shadows Burt, quite frankly, no one gives a damn and you've only yourself to blame

Actually Jeff, it's a technique developed by one of Burt's friends,
Joesph Goerbels. The use of lies and innuendo to get what you want.
Burt professes hate for those types yet thinks of nothing to stoop to
their level. Interesting isn't it?

> Make sure you include Mr. Stafford's informative letter when you contact
> the the various newspapers, Burt.

Just remember, we have no way of actually knowing whether or not this
letter was actually sent. An interesting note is that all previous
correspondence has been via paper medium and yet this suddenly appears
via e-mail Hmmmmm? Given Burt's propensity to lie, I think this may be
another in series of fabrications from a very disturbed and certainly
juvenile mind

If the above was writen by the "El presidente" himself and he realy
believes the ARRL does something about BUYING and SELLING licenses, I
Chalenge him to do something about N1IVP and his wifes' license.

N1IVP told me, yes I can aford it and i bought two, one for me one for
my wife.
For the record N1IVP got his license in Faifield CT.

Hi there,

A couple of years ago, when I was unable to use an amprnet BBS, I used a BBS somewhere in the US to speak to my friend, G4VWL via the internet. I sent my email via internet, he received it via amprnet, and his replies came back to my internet email box.

Does such a facility still exist, and if so, could someone point me in the right direction for information about how to use it?

Thanks,
Ian G7LQU.

Did Mr. Fisher receive any correspondance from the FCC? In it's statement to Mr. Fisher that his VE credentials were suspended, did the ARRL forward said FCC correspondance to him? Although I am not on his defense team shouldn't EVERYONE deserves to hear it from the horse's mouth? Yes, the ARRL is the VE Coordinator and I am not made privy to the whole story, but there seems to be some questions remaining...namely the WHY of it...I mean...where is the evidence? Shouldn't Burt be told the whole story? He may be a blight to amateur radio within the newsgroups (and elsewhere for that matter) but doesn't he have rights? What if this was one of us? It could just have well as been...

I'm using a 2-meter HT ham radio with an outside Discone antenna on a
10ft poll. I realize they should be grounded for lightening protection
but I need to find out if static build-up is a threat to my radio and
would I want to ground my antenna just because of static since the set-up
is temporary and I take it down when I'm not using it. Would an
insulated wire J-Pole antenna pick up any static at all?

Notch cavities are easy if you have a signal generator on the
freqs in question, a 50ohm dummy load and a rcvr tuned to the
freqs needed...

Inject a weak signal in the antenna port from the signal generator
(use of a pad to give a true 50ohm match is optimum but not needed
if the generator is a good commercial quality)...
Tune the rcvr to the opposite freq the port in question is used
for..IE port used for 446...tune rcvr to the 441 freq....
tune the signal generator to that freq.....attach 50ohm dummy load
(any wattage as you will NOT XMIT into it!) to the other port...

Tune the notch on the port with the rcvr to NULL the signal..
you will have to increase the signal generator output to get more
signal into the rcvr to hear it! then tune the notches more...
When you cannot notch the signal anymore with any of the tuning
on that port, you are done with that side....(NOTE: apply only
enough signal to hear it noisily....NOT FULL queiting or full
scale on a SMTR if the rcvr has one.....KEEP the signal slightly
in the noise then notch it, then apply more signal again and
repeat!)

When done with one port, swap rcvr and dummy load, retune generator
and repeat process...

Its a no brainer after the 1st time....

MAKE SURE you keep the 50 ohm dummy load attached to the opposite
port when tuning....also Pads on the antenna port AND the rcvr port
would make a perfect situation but as noted above, you can
get by without them...

(or I can tune notch filters for a charge....but then any "GOOD"
two way shop should be able to at a decent cost (say 10-20bucks)

Only with a GasFet preamp can you get a MVP to .2 or better sens..
I have a MVP with a Hamtronics GasFet....hears .12 for 12 db SINAD
BUT there is a price...you do get higher IMD with it...

I DO have a MVP with a .22uv with NO preamp......but thats a lucky
one......MOST do .3 or so typical.....

Source record: 174520

Maybe someone can offer some assistance.

I was operating CW my TS-940 on last night and suddenly:

1) The audio went away and changed to just speaker noise.

2) The display went to just a series of dots across it (I tried to reset It using the A=B button, but no luck), I haven't pulled the cover to reset the internal reset switch.

3) I turned It on this morning It operated normally, but went back to the series of dots across the display.

4) When you turn the dial the display returns, but goes back to dots as soon as you stop.

Any Ideas? Or does someone know a place to take It for repair in Eastern PA/NJ?

I have news for you Noda san, I speak Spanish fluently and have children who are also bi-lingual. One thing I don't do however is go to the es.radio.amateur and es.radio.ondacorta newsgroups and start professing about how Spain's licensing should or shouldn't be set up and offer to 'share' my unsolicited opinions about radio in Spain. I read there almost everyday and when I do post, Im asking a question not trolling. Get it Masa? I doubt it.

Now go crap your hands, call the police on police frequencies, jam an FM broadcast station

or what ever it is you do in Montreal, stupid Troll.

To put it mildly, Fisher's full of shit. Interesting to note that all
past correspondence has been on official ARRL stationary and now he gets
one via e-mail, plus the fact the all ARRL correspondence via e-mail is
done via their organizational address and not personal, leads once again
that Fisher is a bullshit artist of the worst kind. He can't perpetrate
a hoax with an realism.

It is interesting to note that not one of his fellow "VE's" has come to
his defense. Obviously action speak louder than words. And all this
effort for maintaining status in something that Fishers despises so much.
Interesting that as much as he hates Amateur Radio, he so vehement in his
efforts to be associated with an aspect of it. Bullshit, pure and simple
and Fisher is full.

Loser, they name is Burt Fisher, or Drew, or Spew, or Jamtheham, Cutie
Boy, Lennie Anderson, etc, etc, yada yada yada

First realize that the Stafford letter is from the delusionary mind of
Fisher. It doesn't exist except in his tiny little mind. The reasoning
is plain and simple. When this bullshit first went a round 10 months
ago, Fisher, by his own admission, admitted to meeting the minimum
requirements concerning administering tests Nothing more, nothing less,
despite what the little madman would have you believe. There was no
minority discrimination as he states. He failed to meet a requirement as
was let go. Funny, I'd bet Fisher wouldn't pass any of his students if
they failed to go to classes for a year, yet he expects the his failure
to meet that requirement should be waived...BAHHHHH Fisher got what he
deserves...Ain't payback a bitch

```
Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12
volters. These are 14 volters and put out just about the same amount
of light on 12 volts as the 12 volters do. They should last virtually
forever once replaced in your rig. This voltage is quite hard to find.
Mostly one ends up using 12 volters only to have to replace them again
in a short time. These bulbs draw apprx. 60ma. at 12 volts. I found
these at Dayton one year and bought up all the guy had. Lot of 10
grain of wheat bulbs $15 postage paid to you.
Email me if interested. Also have some of these up on eBay if you want
to play the auction bidding game.

For me the lost of HF operator is due to the market price of equipement (very expensive) and the lost of building transmiter tradition.

I have search for component to build my own receiver and transmiter and the price of individual part is exorbiting. Amateur radio is my hobby not my principal source of income.

I hope for more resonable market. There an principle in commerce. Don't make your profit on a single sale, target on the volume.

I think that's totally incorect. When I was a Novice is 1957, I
worked odd jobs all summer to be able to buy a used Johnson
transmitter (xtal controled, CW only) for $60. I already had
a receiver. Today you can find used HF transceivers, all mode,
for $500-$600. In today's dollars, that's not really any
dofferent than years ago and may actually take less work
effort to save the money.

>I have search for component to build my own receiver and transmiter and the

>principal source of income.

But you must face facts. Amateur radio requires amateur
equipment and you will have to spend some money to
buy your own.

The Usenet used to be an open forum for anyone to post their comments and thoughts. This past week, my popular web site hamradio-online.com was down due to an Internet problem upstream. I have three times attempted to post a notice here that my personal, non-commercial web site was down but would be coming back. Many people had written asking if we had taken the site down. Apparently, self-appointed Usenet censors deleted all of my postings. I have no idea why.

I do not support the concept that anyone who wants to can be an Usenet censor. Yes, we need to address the issue of commercial spam and endless postings about X-rated web sites. But self appointed censors are a disaster and render Usenet even less useful than when filled with spam. My web site is a popular amateur radio resource. It carries no ads and has nothing to sell. It is self funded. Behind the scenes, and as a result of my web site, I have assisted the BBC, Grenada TV, and the Smithsonian Institution in researching stories about amateur radio. Every week people visit my web site and ask for information on how to become a ham. My web site does a lot of good for amateur radio. I'm very disappointed that a group of anonymous individuals have decided, through unaccountable censorship, to make a bad situation (spam) even worse.

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <615>

.....
>From the Editor's Desk:

It is with a tremendous sense of sadness and loss that I must relate the passing of a dear personal friend, mentor and colleague, Stanly Easton Harter KH6GBX. Stan had a massive heart attack and died Thursday evening near his home in Sacramento, California.

As you know, Stan created the ACS program here in California. All that we have done this far, we owe to the vision created by Stan. He leaves a tremendous void in several emergency services organizations statewide. We are all in shock and disbelief at the news of his passing.

We have created a condolence web page at http://www.garlic.com/oes/harter.htm Feel free to leave any thoughts you may have to Alicia, Mitchell and Annette. We will see that your entries reach them. It's also pretty much impossible not to mention Stan's name and not smile and relate a good story; we'd appreciate it if you would share some of your memories of Stan with us on the page, so that we may all remember all of the good things he did for us.

Funeral arrangements are incomplete as of today (Saturday). Check back on the ACS Home Page or on the condolence page; we will update it as soon as we have better information to pass on to you.

The EMCOMM Bulletin follows; the rest of the Newsletter will be suspended until next week.

Aloha, Stan....Mahalo.

Dave Larton
ACS Newsletter Editor
.....

This week's EMCOMM Bulletin:

EMC126 "TSUNAMI! How to Survive 2/3 For release 4/7/98

Part two from a l996 publication of the California OES Earthquake Program from the Earthquake Education Center, Humboldt State University. Concept and some text came originally from the Oregon Department of Geology and Mineral Industries. Pamphlet titled "TSUNAMI! How to Survive the Hazard on California's Coast". Continues:

When and Where do Tsunamis occur?
They occur at any time of day or night, under any and all weather conditions, and in all seasons. Beaches open to the ocean, bay mouths or tidal flats, and the shores of large coastal rivers are especially vulnerable.

What is a low-lying area and how high is high ground?
Typical peak wave heights from large tsunamis in the Pacific Ocean over the last 80 years have been between 21 and 45 feet at the shore line. A few waves, however, have been higher locally - as much as 100 feet in a few isolated locations.

The best general advice today is:
- Go to an area 100 feet above sea level, if possible or go up to 2 miles inland. If you cannot get this high or far, go as high and far as you can. Every foot inland or upwards may make a difference.
- Go on foot if at all possible because of traffic, damage to roads, downed power lines, and other earthquake debris.

"How do I know to evacuate?
A major tsunami-producing earthquake will likely shake the ground strongly for at least 20 seconds. Get into the habit of counting how long the earthquake shaking lasts. If you count 20 seconds of strong ground shaking, evacuate as soon as it is safe to do so."

Who gives tsunami Warnings?
The Alaska Tsunami Warning Center is responsible for issuing warnings about potential tsunamis along the West Coast of the United States. Bulletins are typically issued within 10-15 minutes of a large undersea earthquake in the Pacific Basin. The information is transmitted to state and local emergency managers; they decide whether or not go order an evacuation."

>make your profit on a single sale, target on the volume.

Commercially built amateur equipment is cheaper today than it has ever been. In 1958, it cost the average worker 1,000 manhours to earn the price of a KWM-2. Today, the average worker can have a FT1000MP for less than 150 manhours labor. Inflation has made prices naively look higher, but when you figure them in terms of manhours of labor, they're the lowest they've ever been.

And the retail margin on amateur equipment is typically no more than 6%. That's lower than most any other retail good except food. Most retail goods have a markup of 50% to 100%, the garment industry markup is higher than that. The only ham dealers who are staying in business are those who can do very large volumes of business. They aren't trying to make a killing on the sale of a single unit. They are trying to survive by pushing enough units out the door to cover their overhead.

Building equipment is also cheaper today than ever before. VLSI chips with capabilities not even dreamed of a few years ago sell for dollar prices similar to those of a single function vacuum tube of years gone by yet encompass entire radio subsystems in a single chip. And that's without even factoring in inflation of the dollar. Only those intent on building using yesterday's technologies are at a handicap. Those sorts of obsolete parts are becoming scarce and expensive. But those building with today's technologies are producing better equipment at lower cost than ever before.

Why would anyone operate QRP in an emergency? The
only thing that would result on QRP would be someone who had
no other options. The TRUE emergency operations do
NOT just pop up without preplaned response activity...and
that involves far more than a QRP operation.

If I have misread Walt's comment, I await what the point
relative to QRP operation is then.

HI O$B! I have a SONY 330-CFR 1. It is the same as the
320-CFR1 except it has a tape recorder on the bottom of the
radio. I have the covers and all of the manuals for it. I bought
it about 20 years ago. Where are you?

Argh. I went to my Dad's house to find a copy of my first license, and found out my Dad threw out not only that, but my old logs and QSLs!! He and I became Novices when I was about 11 or 12, but I can't remember what year it was (I'm 33 now). I haven't been able to find this information.

Failing that, I know it was just after the KA#XXX calls were first issued. I was KA7AIJ. If I could find out when this call scheme went into effect, it would be helpful.

Anyway, I can't seem to find this information. Anybody know how to do this? Any help would be much appreciated.

Hi, Don.

Classic PLL unlock problem. If you work your way through and around
Kenwood's ftp site at
ftp://ftp.kenwood.net/c%3A/www/kenwood/kenftp/kenwood/Amateur/, you will be
able to find their service bulletins on the 940 and one of them covers this
problem. In a lot of cases, all it requires is a repeaking of the PLL
circuit.

As for east coast service, Kenwood's own east coast repair facility has a
good rep. Their address can be found at
http://www.kenwood.net/contact.html#repair

Good luck.

----------------------------------

AMATEUR RADIO SPECTRUM PROTECTION BILL INTRODUCED

At the request of the ARRL, a bill has been introduced in Congress to ensure
the availability of spectrum to Amateur Radio operators. The bill, HR 3572,
the Amateur Radio Spectrum Protection Act of 1998, would protect existing
Amateur Radio spectrum against reallocations to or sharing with other
services unless the FCC provides "equivalent replacement spectrum"
elsewhere. The bill was introduced March 27 by Rep Michael Bilirakis of
Florida, a Republican, with the cosponsorship of Rep Ron Klink of
Pennsylvania, a Democrat.

If approved, the measure would amend Section 303 of the Communications Act
of 1934 to preclude reallocation of any primary Amateur Radio allocations or
diminution of any secondary allocations, and would block any additional
allocations within such bands that would substantially reduce their utility
to Amateur Radio, unless the Commission at the same time provides
```

"equivalent replacement spectrum" to the Amateur Service.

The bill points out that a basic purpose of Amateur Radio is to provide "voluntary, noncommercial radio service, particularly emergency communications," and that Amateur Radio has "consistently and reliably" provided emergency communication during and after disasters. The measure notes that the FCC has "taken actions which have resulted in the loss of at least 107 MHz of spectrum to radio amateurs."

HR 3572 has been referred to the House Commerce Committee. An effort is under way to enlist additional cosponsors for the measure. Amateurs are encouraged to contact their Representatives and urge them to support the bill or to sign on as cosponsors. The full text of the bill is available at http://thomas.loc.gov/cgi-bin/query/z?c105:H.R.3572:

HAM RADIO EASES TORNADO RECOVERY IN MINNESOTA

Ham radio operators from across Minnesota provided a link with the outside world this week after tornadoes struck two towns in the southern part of the state. Tornadoes flattened Comfrey, a farm community of about 500, and badly damaged the City of St Peter, population 9000 and the home of Gustavus Adolphus College. Electricity and telephone service were knocked out by the storm on March 29. At least two people were killed.

For Minnesota Section Manager Randy "Max" Wendel, N0FKU, this was more than a disaster that required the helping hand of ham radio. St Peter is his hometown, and the place where his parents still live. Wendel and Minnesota SEC Gary Peterson, N0ZOD were among dozens of ARES members who responded--after getting word from Mike Langer, WQ0A, in St Peter via ham radio of "unbelievable devastation." Wendel reports Langer went silent as soon as he realized that his own house was among those that no longer existed.

Wendel and Peterson alerted other ARES members to be prepared to assist with communication, then headed for St Peter. ARES members from Rochester and the nearby Mankato area were among the others who turned out. Wendel himself arrived in St Peter after nightfall, using his ARES identification to get past state police barricades. Wendel found his parents safe and their home damaged. Others, including their neighbors, found themselves suddenly homeless.

Wendel said hams already had situated themselves at key locations, including the Nicollet County Emergency Operations Center, a shelter for victims, and at a sports arena. The ARES team set up an emergency base station at Gustavus Adolphus College. While most students were out of town for spring break, 28 students remained on campus and had no contact with the outside world.

During the next day or so after the tornado struck, ham radio was the only communication out of the city and the primary means to coordinate supplies into the city from the Red Cross in Mankato to the shelters in St Peter. The morning after the tornado, the Salvation Army arrived to distribute food. Hams provided logistical support for that effort as well. Other hams

shadowed disaster assessment officials who went door to door throughout the city or handled net control duties at the EOC. Still others simply made themselves available as needed to cooperate in the recovery effort.

"This event once again set a clear example of the importance of Amateur Radio during an emergency," Wendel said. Both he and Peterson stressed the importance of planning. Fortunately, the local government officials and agencies were aware of Amateur Radio as a resource. "When it comes to the unexpected, there is no time to explain who we are and why and how we can help," he added.

With typical ham ingenuity, Dave Kleindl, KA0BFP, scrounged enough materials to construct a temporary dipole to put a local broadcast station back on the air after its towers had been downed in the storm. With help from other hams, Kleindl coordinated with the city's public works department to get a generator to a water tower that was still standing and reactivated the local VHF/UHF amateur and public safety repeaters and also provide power for the water tower itself. Wendel says the police and public works antennas were blown off the water tower, but Kleindl switched the transmitters over to the ham antennas which withstood the estimated 200 mph winds, allowing local government communications to resume. The amateur VHF and UHF repeaters temporarily were put over onto mag mount antennas.

Wendel says the personal impact of the tornado disaster has increased his appreciation for the necessity of helping. "Until you've been in a disaster situation and have had friends and family faced with uncertainty, it's difficult to understand the importance of lending a helping hand, even if it's just handing out sandwiches to victims," he said. "Any of those victims could have easily been me."

On April 1, Wendel said that snow was falling in the stricken area. He said he expected ham radio involvement to wind down by next week as normal communications systems are restored.

For a look at the devastation in St Peter, see
http://www.sigmamaps.com/StPeter/stpindex.htm

On April 2, Wendel reports, Peterson was asked by the Salvation Army to provide communication support at Comfrey. He reports that Peterson and his wife, Gladys, KB0TUT, managed to haul a FEMA radio communications trailer to Comfrey (with a breakdown along the way).

"Additional hams and ARES members are being solicited to assist in Comfrey for the Salvation Army," Wendel said. Hams were expected to shadow two Salvation Army feeding centers in Comfrey while keeping in touch with the Salvation Army warehouse in Minneapolis. He adds that Brown County ARES EC Harvey Stadick, WI0D, who lives on a farm near New Ulm lost all of his outbuildings in the tornado outbreak, but still has his house.

VANITY FEE COULD DROP DRASTICALLY

The fee to obtain an Amateur Radio vanity call sign would drop drastically under the FCC's proposed fiscal year 1998 fee schedule. If adopted, the new

fee will be $12.90 for the ten-year term, payable at the time of application for a new, renewal, or reinstated license.

The new fee is contained in an FCC Notice of Proposed Rulemaking, MD Docket 98-36, Assessment and Collection of Regulatory Fees for Fiscal Year 1998, released March 25.

The current vanity call sign fee is $50 for the ten-year term. The FCC says it has no plans to refund the difference between the current fee and the new fee for applicants who submit applications before implementation of the FY 1998 fee schedule.

The FCC has calculated the new fee based on an expected 10,000 applicants during FY 1998. The FCC says it will announce the effective date for the new fee either in the Report and Order that terminates the fee schedule rulemaking proposal or by a public notice.

NEW YORK-LONG ISLAND SECTION MANAGER RECALLED

Members of the New York City-Long Island Section have recalled Section Manager Leonard Buonaiuto, KE2LE, in a special election. The committee of tellers on April 2 counted 699 yes votes and 347 no votes in answer to the single question on the ballot--should the Section Manager be recalled, yes or no. More than 2900 ballots were sent to ARRL members in the New York-Long Island section. The successful recall marks only the second time in League history that a section manager has been removed from office by a vote of the section members.

George Tranos, N2GA, of Bellport, New York, was immediately appointed to complete the remainder of the section manager's term, which runs until January 1, 1999. "I look at it as an opportunity to rebuild," Tranos said during a brief visit to ARRL Headquarters. Tranos is immediate past president of the Long Island Mobile Amateur Radio Club--LIMARC--an ARRL Life Member, and an Assistant Director.

Tranos already has restored to office some of the field appointees dropped by his predecessor, including SEC Mario Maltese, WF2T, Official Observer Coordinator Rob Todaro, N2JIX, Section Government Liaison Mark Nadel, W2UFO, and Nassau County DEC George Gluck, WA2WKV. He said he'd be making additional appointments in the very near future and expressed hopes that ARRL members in the section would work together to build a greater League presence.

The first call for nominations in the regular Section Manager election will appear in the July 1998 issue of QST.

LEAGUE TO HOST MEDIA FORUM AT DAYTON HAMVENTION

All hams active or interested in promoting Amateur Radio in their communities should make plans to attend the ARRL's first-ever Media Relations Forum at the Dayton Hamvention. The event is set for Saturday, May 16, from 3 until 5 PM.

The program will cover various media relations how-to topics such as working with your small community newspaper, promoting Amateur Radio on TV, and adding appeal to your story ideas.

Media professionals set to participate as panelists include Jeff Reinhardt, AA6JR, Reinhardt and Reinhardt Advertising Inc, Agoura Hills, California, and an ARRL Public Relations Committee member; Armond Nobel, N6WR, publisher of Worldradio; David Greer, N4KZ, publisher of The Kentucky Standard and a member of the PRC; Alan Kaul, W6RCL, Senior News Producer for NBC in California; and Jim McDonald, KB9LEI, Indiana Public Information Coordinator.

Participants will learn more about the League's media relations program, meet staff members, hear from news professionals and visit with fellow public relations volunteers. Some participants will get a chance to "practice pitch" stories to members of the ARRL's PR committee or to ask questions of news representatives on the panel or in the audience! You'll come away with great ideas--including ways to spice up your news releases and tips for working with your local news media.

If you are a PIC or PIO appointee--or if you're at all active in promoting Amateur Radio to the general public in your community--you won't want to miss this opportunity.

For more information, contact Jennifer Gagne, N1TDY, ARRL, 225 Main St, Newington, CT 06111; tel 860-594-0328; e-mail jgagne@arrl.org.

WIRELESS PRIVACY BILL PASSES HOUSE, HITS SENATE

In a resounding 414-to-1 floor vote HR 2369, the Wireless Privacy Enhancement Act of 1998, passed the US House of Representatives in March and now awaits action in the Senate. The house-passed bill includes a report that specifically resolves concerns that the ARRL raised with the staff of the House Telecommunications Subcommittee.

When HR 2369 was first introduced, the League feared that it unintentionally could have outlawed all out-of-band operations including MARS and Civil Air Patrol, as well as most scanning and short wave listening. These fears--also voiced by scanner enthusiasts, volunteer fire departments and others--were addressed by the bill's sponsor, Louisiana Republican Billy Tauzin, when the bill was amended last fall. However, the League continued to be concerned that certain provisions in the bill could be interpreted as forbidding the modification of linear amplifiers for 10 and 12-meter operation, as well as the modification of transceivers for MARS and CAP use.

In the days before the bill went to the floor, subcommittee staff worked with the League and with other involved parties to craft a committee report that would put our fears to rest. Committee reports are the official statement of "Congressional intent" on important legislation. The House voted on the bill and the report as a single package.

In part, the report made it clear that the Committee did not intend the legislation to prohibit hams from modifying linear amplifiers after purchase, as permitted by FCC rules, for use on 12 or 10 meters, or from

building or modifying one amplifier per year to enable this capacity.

The report also said that the Committee did not intend that the proposed law be interpreted to discourage manufacturers from providing MARS and CAP modification information. The report also clarified other concerns raised by scanner enthusiasts, short wave listeners and manufacturers. The report's full text can be found at ftp://ftp.loc.gov/pub/thomas/cp105/hr425.txt.

During the house debate on the bill, Tauzin and Florida Republican Cliff Stearns both took time to praise the volunteer work of Amateur Radio operators in the wake of natural disasters.

There is no word on what the Senate plans to do about this legislation.--Steve Mansfield, N1MZA

ANDY THOMAS CONTINUES MIR-SCHOOL QSOs

Students at Seaford, Delaware, Middle School got a chance to speak to US astronaut Andy Thomas, KD5CHF, on April 2, albeit only briefly. Apparently because of confusion over which frequencies were to be used, the contact began late--after Mir was already well into its pass over the VK5AGR telebridge station--and lasted only three minutes. Despite the brevity, students at the Delaware school got to ask seven questions.

The contact continued a largely successful string of Mir-school QSOs. Earlier in the week, however, students at Farmington High School in Connecticut were disappointed when South African ground station ZS6BTD was unable to make contact with Thomas for that telebridge contact. As it turned out, the school contact had fallen victim to the Mir crew's very busy schedule. An effort will be made to reschedule the QSO.

Other Mir-school contacts are scheduled with schools in New Mexico, Connecticut, New Jersey, and Massachusetts.

On April 1, Thomas filmed the activities as his cosmonaut crewmates Talgat Musabayev, RO3FT, and Nikolai Budarin, RV3FB, left the Russian space station for a six-hour space walk. The two attached handles to the ship's exterior to help in repairing a solar panel that is in danger of breaking away and possibly damaging Mir. The panel was damaged when it was struck by a Progress supply rocket last summer. Another space walk is scheduled for April 6.

Thomas will be aboard Mir until June. He reportedly has been active on 2 meters while Mir is over the US and over his native Australia. Thomas also holds a special event call sign, VK5MIR.

SOLAR UPDATE

Solar seer Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity has dropped back a bit, but still remains fairly high. We have reached both the end of a month and the first quarter of 1998, and the average solar flux trend looks good. The last three quarters of 1997 had an average solar flux of 73.6, 82 and 94.3 and solar flux for the first quarter of 1998 averaged 98.8. Average solar flux for January and February was 93.4 for each month

and for March it was 109.1.

For April look for solar flux to rise over the next week, peaking around 125 on April 9 and 10, then dropping back below 110 by April 18, then peaking below 120 around April 22 and 23. Active geomagnetic conditions may result in disturbed propagation around April 7 and again around April 17.

The author welcomes questions or comments via email at tad@ssc.com.

Sunspot numbers for March 26 through April 1 were 77, 80, 81, 82, 66, 71, and 90, with a mean of 78.1. The 10.7-cm flux was 110, 108.1, 103.9, 100.3, 107.5, 108.1, and 105.7, with a mean of 106.2. The estimated planetary A indices were 10, 13, 14, 17, 10, 10, and 5, with a mean of 11.3.

NOTE: After what he calls "a long and exciting bachelorhood," our solar singleton Tad Cook, K7VVV, will marry April 4, and plans to be honeymooning in Hawaii with his new bride, Carmen, later in the month. As a result, Lee Wical, KH6BZF, will provide the solar/propagation bulletin on April 24, 1998. Our best wishes to Tad and Carmen!--Ed

----

IN BRIEF:

* This weekend on the radio: The European EME Contest, the EA RTTY Contest, the Elettra Marconi Contest, and the SP DX Contest are on the roster this weekend. Just ahead: The QRP ARCI Spring QSO Party (CW), the MARAC SSB County Hunter's Contest, and the Japan International DX Contest (CW). See April QST, page 102, for details.

* Correction: Dayton Hamvention Amateur of the Year Andy Feldman, WB2FXN, has been appointed an assistant director of communications, New York wing, Civil Air Patrol, according to NY Wing Commander Col Joy Nelson. Feldman's CAP appointment was reported incorrectly in The ARRL Letter, Vol 17, No 13.

* New Maine SM: Michelle Mann, W1GU, has resigned as Section Manager of Maine. Completing the few months remaining in her term will be the new Section Manager-elect William "Bill" Woodhead, N1KAT, of Auburn. Woodhead ran unopposed for the Section Manager's position for a full term starting July 1.

* Franklin Institute's W3AA to remain on the air: Thanks to efforts of the Phil Mont Mobile Radio Club, the Franklin Institute Station W3AA, in Philadelphia, likely will remain on the air and not become an inactive exhibit, as had been announced previously. According to Club President Russ Stafford, W3CH, discussions have been taking place, and the station likely will remain available to visitors at the science museum. The upper floor currently has the astronomy and ham radio display. Originally licensed in 1952 as W3TKQ, the continuously active Amateur Radio exhibit has demonstrated the hobby to thousands of visitors over the years. Following its total renovation in 1991, the station was rededicated by the late Gioia Marconi Braga, the daughter of Guglielmo Marconi. A team of club volunteers keep the station on the air during museum hours. For more information, see

the W3AA Web site, http://www.fi.edu/tfi/exhibits/w3aa.html.--Bob Josuweit, WA3PZO

* FEMA offers on-line courses: The Federal Emergency Management Agency (FEMA) offers a series of self-taught courses that might be of interest to amateurs involved in public service disaster response. Course titles include Emergency Program Manager: An Orientation to the Position; Emergency Preparedness, USA; Radiological Emergency Management; Hazardous Materials: A Citizen's Orientation; A Citizen's Guide to Disaster Assistance; and Basic Incident Command System. Course materials are provided as Adobe Acrobat PDF files. See http://www.fema.gov/emi/ishome.htm for details on how to enroll.

* AMSAT seeks net info: Attention all AMSAT Net managers! Andrew Reynolds, WD9IYT, and AMSAT Journal are looking for you. Actually, they're looking for information on your net. The AMSAT Journal editorial staff is working with AMSAT-NA Vice President for Electronic Publishing, Paul Williamson, KB5MU, to put together an up-to-date list of all operational AMSAT nets. The Journal hopes to publish this list on a regular basis, so that all satellite operators will be aware of net activity in their area, as well as help keep the AMSAT Web page information current. Forward date, time, and frequency information of your net operation to Andrew Reynolds, WD9IYT, wd9iyt@amsat.org.--AMSAT News Service

* Mir-APRS program available: Bob Bruninga, WB4APR, reports the MIRMON program, designed to simplify the monitoring of downlink packets from the Mir space station during special MIREX school experiments, now is available for downloading. It includes a demonstration of the recent Mir-APRS experiment, showing students the potential for future, similar tests using UI packet frames. The program is available from the TAPR FTP site at ftp://ftp.tapr.org/tapr/SIG/aprssig/files/dosstuff/APRSdos. Bruninga reports the program is a test version and has not been thoroughly tested on the air. Users are cautioned to use it only for receive monitoring and for familiarization with the user interface. Any transmit testing at this time should be done locally on a simplex digital frequency.--AMSAT News Service

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

I've programmed a 20 pin AVR microcontroller to act as 100khz I2C slave. When properly interfaced to the LCD connector of the V7, it can simulate key presses.

Reading the I2C slave (similar to reading a serial EEPROM) reveals the current LCD contents (frequency and so on).

Writing commands to it simluates the LCD keys.

The LCD can _not_ be connected to the V7 at the same time as the remote controller (without more development). The connectors are non-standard, the easiest (=expensive) way to get them is to buy an LCD extension cord.

I'm not sure how (=whether) to go on with the project, now that the interesting part has been done. Are you interested in my work?

Most radios. e.g. Yaesu FT 212,2400,2500 etc.,etc. use a 10 volt bulb which Yaesu wants to sell you for lots of bucks and then it blows out again just like you surmised. I replaced these with Radio Shack 12 volt bulbs at 2 for $1.79 and haven't had to re replace any yet. Yaesu and maybe others run these off of a 8 or 10 volt regulator and not directly off of the 12 volts that the radio runs on.
At any rate, whats so rare about a 14 volt grain of wheater? American Science and Surplus has them for 4 for $2.00 or 50 cents apiece. The $1.50 each price you are quoting sounds like a rip off.

>Why?

A better question: Why did you re-insert the .dx NG, after I dropped it from any fol-ups to my post? Can you provide any answer at all? I've again deleted it from any further fol-ups. Can you resist the temptation and leave it out?

>His letter was merely a statement of UNRELATED fact.

So it's a fact that an irregularity occurred while you were proctoring an exam session? Is that what you're saying? And according his letter, if an irregularity occurs, then the ARRL must suspend the VE's credentials. That's the conditional statement from logic, Burt: If A, then B (or B is a consequence of A, or B follows A). Of course, B can result from other conditions, but in regard to his letter to you, no conditions other than A ("an irregularity occurred") were mentioned.

Have you contacted the FCC regarding this issue? If so, what was their response as to their investigation? If not, why not?

Jeff KH2PZ (again, .dx dropped from header)

>considering purchasing a 440 Ramsey Radio

Jim, I have built several Ramsey kits and they are very educational things to build, but not very reliable. I have a 6m kit running, but the frequency stability is not as solid as I would like to see and the audio just plain sucks! Of course, that is probably due to the cheesy speaker/mic connection they chose to give you on the front panel. I have also built the FX-440 kit, but am having a devil of a time getting it to work. My VCO circuit doesn't work and the instruction manual is a bit vague in this area when it comes to trying to troubleshoot the problem.

For my money and time (and sanity sake) I have discovered the wonderful world of Ten-Tec T-kits. I just finished building the 2m version kit, the model 1220 and I am *very* impressed with it. The kit has a lot more built-in features than the comparable Ramsey FX kit and is similarly priced. The best part is you don't have to pay extra for a housing like you do with Ramsey. The T-kit housing is a very fine quality metal enclosure and is included with the kit. The entire project was a joy to build. The manual is very well written.

I don't think Ten-Tec has come out with a 440 version of this kit yet, but when they do, I'm buying one!

It is with deep regret that I inform the amateur and broadcast
radio community of the passing of Stan Harter. He passed away
Thursday evening (2 April) of a massive heart attack.

Stan pioneered what would later become the nationwide Emergency Broadcast
System while employed as the state communications officer here in Hawaii.
He left Hawaii to work for the California Governor's Office of Emergency
Services. At the time of his death, he was Program Manager for the
Auxiliary Communications Service, and EAS Vice-Chair/Executive Director,
FCC State Emergency Communications Committee.

Aloha, Stan. Rest in peace.

Yeah, but the prepared emergency operator will have a couple of
spare batteries for his HT already charged and ready to go. Most
of the communications needs an amateur has to fill in an emergency
or disaster situation are local and tactical in nature. For those few
which aren't, he generally has vehicle power available, which means
he can run at least 100 watts, and that's plenty for nearly any
situation.

And the primary skills he needs are knowing how to follow net
procedures, how to shut up and listen, and how to *cooperate*
with other amateurs to get the messages passed. Rather than
trying to dig out the weak signal, a smart emergency operator
asks for a relay to ensure rapid and accurate message handling.
And the smart operator queues up and gets his traffic listed so it
can be handled in an orderly prioritized fashion. He isn't competitive,
he's a cooperative and disciplined part of a communications team.

From: dmi853@swbell.net
Message-ID: <352773BD.2427C6BE@swbell.net>
Source record: 174412

The general quality of the kit is good, but there is room for
improvement in the design to incorporate some of the newer componets
which would make it easier to get the units operational ,would improve
audio quality both in transmit and receive mode and would make them more

reliable then they are at present.

The manual is definitely a joke , assembly instuctions and parts
placement diagrams have many errors, the trouble shooting section needs
a great deal of revamping to be of help.

One has to wonder why Ramsey has not corrected these problems in the
four or five years the kits have been out .

For a teacher, a nice concise sentence (NOT) Do you also sound like this in
person?? I will attempt to translate, but my translation skills for babbling
are limited...You did not send the e-mail, and you do not knjow who actually
did, yet you reprinted it as if it were in fact the signed sender..poor form,
but perfectly in character for you.

And please, my life has many facets..you, according to the people around you,
including some of your students is something tha Dr K would love to discuss
with you. No wonder your first wife left you.

Been there, tried that..you signal is weaker than your personality. In fact, if you can remember, I wanted to meet you at a major Boston area computer show (seeing as how you're the big time computer salesman and repair tech) and you pussy'd out. Why waste my time on you?? Blathering and incessant babbling are best left to the mentally infirm.

I did notice you still haven't addressed the fact you failed to meet the minimum requirement for administering a VE test. Noticed you haven't addressed the comments on your nazi-like tactics on this an other newsgroups. Nor have you addressed you claims of minority discrimination.

Go ahead, pick a frequency and a time, but make sure everyone can hear and if I am free, I'll listen in...

217. Re: Want to clean up the newsgroup? Write abuse@aol.com about Spew

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-05 00:00:00 UTC
From: vbook@vbook-nospam.com
Message-ID: <6g8cuu$98u$1@usenet48.supernews.com>
Source record: 174423

Clarification, needed per an email I recieved:
1. My ISP is located near Seattle, Washington.
2. My web server is hosted in Sunnyvale, California.

That the web server had Internet connection problems has no relation to my access in Seattle. That my web server in California was down did not prevent me from having reliable Internet access through my Seattle-area ISP. So I should have been able to post the web server status without problem.

At the same time that announcements about my web server disappeared, I also posted other items to Usenet during this period, including the same newsgroups, and all appeared in Usenet. Only the items presenting the status of my web server were cancelled by persons unknown. So this is the issue that I'm trying to raise - there does appear to be either persons or automated robots that are scanning messages and cancelling them here. The persons doing this are unaccountable to anyone and are as destructive to Usenet as is the "spam" problems that floods the newsgroups with announcements for (mostly) x-rated web sites.

Tnx and 73, Ed, KF7VY

Source record: 174424

I have win95 osr2 on a cd that came with the computer and need to reload it after formating the drive. I have a Creative Labs 24 speed cd-rom that is the IDE type. It seems that you need to at least load the cd-rom drivers to recognize the drive. I would have thought that the cd-rom was bootable but I guess it isn't. So the problem is getting the drive started up so you can transfer files from it or do the setup. On tying to boot off the cd-rom drive I get a message about ATAPI boot error or similar. How do they go about installing win 95 from the cd-rom? Any help much appreciated. Mike K7MH. K7MH@juno.com or reply to this addressed message.Thanks.

Instead of complaining about the hobby changing we could try to help to keep
modes going. I help people all the time to upgrade their CW. Stop
complaining and do something to help under licensed hams upgrade. It will
take 10 years at a minimum to do away with CW so lets get people interested
in the roots of the hobby..

It is with deep regret that I inform the amateur and broadcast
radio community of the passing of Stan Harter. He passed away
Thursday evening (2 April) of a massive heart attack.

Stan pioneered what would later become the nationwide Emergency Broadcast
System while employed as the state communications officer here in Hawaii.
He left Hawaii to work for the California Governor's Office of Emergency
Services. At the time of his death, he was Program Manager for the
Auxiliary Communications Service, and EAS Vice-Chair/Executive Director,
FCC State Emergency Communications Committee.

Aloha, Stan. Rest in peace.

Yes it does. I've used it and it works provided both
correspondents are licenced. The gateways are in the
USA and Australia.

I'd hesitate to post the information I have as it's
now several years old, but if you want it, I'll
EMail it.

That anyone who really cares about being prepared for an
emergency would only carry a QRP rig ith them is amazing.
You expect the rest of the ham population to be there ready
to work your QRP station if something happens. That is
not likly at all. Every emergency that involves hams has
consistently relied on hams with VHF capability...not QRP
operations. Even those few emergencies that involved
HF communications, they have all involved typical
power levels and regular SSB transcievers/stations...NOT QRP.

Dick thinks no one can see a QRP possibility. Sure
there MIGHT be one person, but that QRP operator will
not be an integral part of ongoing emergency commuications.
There are much better equiped hams that will and do
meet the challenges.

If VHF is used, then you need that big amp and beam to blast in
over the jammers. Nothing would be a bigger jammer magnet
than someone doing something useful on ham radio. If they're
using low power, they'd be a jammer magnet doubly so. If you're
not 'their kind' figure it a sure thing. (Sadly,
not completely a joke.)

Actually, I'm hoping that 150 watts and 5el beams will make
me mostly jammer proof on 2/440 for any nearby repeaters.
(Does anyone even make an amp in the 300-1kw watt range for 440?)

227. Power line noise

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-05 00:00:00 UTC
From: "Jason M. Warren" <jason.warren@ibm.net>
Message-ID: <35280892.AE1BE187@ibm.net>
Source record: 174433

For a year or so now, I've been clobbered by hash on our AC power line. It is usually extremely strong on every freq from below the BC band through 30MHz and even leaks into the TV cable, showing up as "sparklies" on most channels. It's strong enough to sneak through FM discriminators.

Back in October of last year I complained to our local electric utility company and they sent crews and engineers out to check things out. They all agreed something was the matter, but after poking around for a while couldn't pinpoint the source. Nothing happened.

A month later I called and asked what was being done. Nothing. Then they sent out another crew that again agreed things were busted but couldn't pinpoint the source. Nothing happened.

I've kept this up now for six months. They finally sent out a pair of engineers with handheld VHF gadgets that are supposed to make it easy to find arcing equipment. They walked up and down the street and claimed they couldn't find anything. THen they did a Good Engineer/Bad Engineer skit, claiming basically that if they couldn't pinpoint the source then there really wasn't a problem. Nothing happened.

I know I can write to my State's Public Service Commission (New York), but I don't know if there are regulations, field-strength levels, etc that would back up my complaint.

Anyone care to comment on a course of action short of moving across town?

Thanks,

Jason Warren

Unfortunately, in absense of any particular evidence to the contrary,
I really doubt person or persons unknown are singleing out your postings
and cancelling them. A scan of my control newsgroup for the past two weeks
shows no such cancels.

USENET is a store-and-forward system of propagating messages. It is not
very reliable. I suspect your messages merely got dropped somewhere along
the propagation path to the backbone. There are, however, several different
cancelbots on USENET, and you should check with their web sites to see if
something you put in a message happened to trigger a cancel message.

in my opinion the ground plane kit is a gimmick just like all the other
C.B. stuff out there. A 1/2 wave vertical doesn't require a groundplane
and if you used the puney one you can buy for the Antron 99 it wouldn't
make a bit of difference. N7KSM

>maximum power and a 6 over 6 over 6 yagi for every HF band at your
>disposal.

Walt, focus on my last line above, "...very good training for
emergency communicators", rather than on the gear they're running.
The "training" they impose upon themselves weekend after weekend, their
traffic-handling skills, and intimate knowledge of propagation,
international procedures, and operating techniques makes them
the exceptional choice for disaster communicators.

Now, regarding the stations they run, many have a standby generator.
You'll find they have the most efficient and robust equipment
installations, from radios, operating position, lead-in, to antenna,
as any ham shack, for running such a staion is the only way to seriously
compete.

These exceptional operators and the rock-solid stations they operate are
whom your community turns to when disaster strikes, for these communica-
tors voluntarily "train" themselves weekend after weekend, in the most
grueling mental and physical activity known to the amateur radio service.
No other operators are better prepared for the rigors of providing
emergency communications.

>The skills required are somewhat different ..... QRP, simple lash-up
>antennas and very limited battery power are closer to the mark.

After the disaster strikes, I believe my community would rather rely
on someone able to run a bit more than 5W. (I'll be running about 50
for Field Day into a wire beam strung between coconut trees.)

Jesus... lets just give the privilege to use Amateur radio frequencies
as Christmas presents! I've gotta admit that it took me a long time to
get my General but I sure didn't cry about 13 WPM. I became a ham at the
age of 15 and passed my 5 WPM. Come on, you mean to tell me that grown
men can't pass 13 WPM. It takes practice and if you realy want to become
General you will actually study and pass it!

Hate to bring it up, but with the jammers becoming more and more omnipresent on th voice segments of both HFand VHF, CW could be the only mode available that will do the job in the face of all the intentional QRM on voice modes. One doesn't see that stuff on the CW band segments, and even if it did migrate there, good CW operators can operate around or through it much easier than voice modes allow. Even DSP doesn't help eliminate jamming that is also voice. We've already seen a number cases of deliberate jamming of urgent or emergency signals in the past. Look for it to get worse as more and more misfits without any real interest in ham radio, but a very real interest in making trouble for someone, *anyone* handy, migrate to a hobby that has traditionally required determined, serious, deliberate effort to qualify for licenseing, and today does not.

Yep could be. Could be the aliens will land. Could be the earth falls
into the Sun and the only mode that will get out is Morse code. Could be.

Tom.

My speculation would be he resigned for personal reasons. He really campained hard in the division and I think I received three direct mail pieces from him. I would think he was going in with his eyes open and have a hard time believing that hardball politics would run him out. I hope everything is ok with him.

Here, jamming is forcing emergency stuff to frequencies way above
the crowd on 2/440. The problem with CW, really, is that not many
people can really get 100% copy. Personally, I think jamming will
push voice to digital spread spectrum. In the meantime, I think
the best solution is big beams and big amps. I don't even
bother with 440 until I can get, like 100Watts+ going. For
some reason, Berkeley seems to have more repeater problems than
anywhere else in the bay area. 440 seems worse than 2 meters
here. Not sure why.

I am available most days; work from home. I am especially interested in teaching the practical side of ham radio technology. I will help troubleshoot kits, old radios, etc., but will expect the new or prospective ham to pitch in.

Expertise gained from over 40 years of ham radio and almost as many years in broadcast engineering.

I have been a radio amateur since 1954, first licensed as KN2HYZ in Peekskill, New York at the age of 14. I have been active in periods ever since, never losing the ham spirit.

I would like to be involved in helping young people start in ham radio. Especially those who are already licensed and are "lost" looking for ways to operate or set up a station.

I am a practicing electronics engineer (for over 35 years) with
expertise in solving problems in the design of linear circuits, audio
signal processors, low frequency (DC to 10 MHz), low noise, field

effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results
are in September 1994 QST, including warranty and customer service

information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we

felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Robertson's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Robertson's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's certified by WCARS VEC. I have served for several years as a proofreader for the NCVEC Question Pool Committee. I work closely with the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic handling from almost day one, having earned my first BPL at age 16 as a novice. I have served as Assistant EC, County EC and currently serve as District Emergency Coordinator for ARES/RACES and District Radio Officer for Emergency Management Area F of North Carolina. I also coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as an officer of the local club, the Western Carolina Amateur Radio Society. I designed our homepage, am quartermaster of club equipment, and carry the keys to the club repeater. I frequently teach both theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI committee, hold WAS Awards both as a Novice CW operator and SSB Extra Class, a DXCC with 86 of them worked as a Novice. I am also the National Board Chairman of the Geratol Net, a WAS net which meets nightly from October thru April. I also am chairman of the local club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF antennas and am frequently a new licensees first contact. (A debt I am repaying to my three trusty Elmers of so many years ago, two of whom are now silent keys)

I would be willing to help in these general areas on-line or close-by on the phone or in person. (I am a college professor by trade)

* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained

by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

Amateur Radio: Elmers Resource Directory

More information about this list can be found in the companion posting
to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, K3FU

- A -

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 Baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group to discuss issues of regional packet networking (Net-SIG). As a result, the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related mailing lists. Its purpose is provide a medium for communications among those interested in packet radio networking, both dealing with technical issues and political/regulatory ones. We'll discuss things like how the potential 219MHz band will fit into the networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

David Andrews ZL2SX

andrews@clear.net.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO UNIX, Win95 networking information available.

ampr.org IP Coordinator for California - Los Angeles County (44.16.xxx.xxx)

Hardware, software and wetware questions answered either with correct answers or the name of someone who does know.

I work small contests and do a little bit of DXing on 17 and 10 meters. I set up our club's Field Day activities last year. I do a lot of computer work on IBM/compatibles and a lot of Internet work. I used to do a lot of digital work, including running a BBS and node, but am no longer involved in packet. I am in the process of building a 440 MHz repeater and am the programmer of the KE4ZIM repeater controller. I really enjoy working with youth in general.

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

American Radio Relay League | Justice is being allowed to do whatever
225 Main St. | I like. Injustice is whatever prevents
Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams,
carrying ARRL news, details on upcoming hamfests, conventions and
Amateur Radio examinations, the ARRL Publications catalog, information
of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich,
WY1Z, and the other Boston Amateur Radio Club volunteers who've worked
since December 1994 to keep ARRL up and coming on the Web via the ARRL
home page they installed and maintained at oak.oakland.edu. Their
volunteerism helped show us that upgrading our Internet connection to
a level that allowed on-campus Web service would be essential to
ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger
and better are _essential_ to its ongoing success, so please drop by
and say hello!

I have been in ham radio for 15 years and played and worked on many modes and radios.

My home page above is a Link page I mostly use to find what I am looking for.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for

web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which is great fun. I have put together PC's and help other people with Linux issues. On packet, I run TCP/IP using LNET which is WAMPES-adapted for the UK by Darryl, G7LED.

I'm the 425 DX News Mailing List maintainer. Further info at:

http://www.fr.flashnet.it/cgi-bin/425dxnews-list

I'm the webmaster for:

http://www.fr.flashnet.it

(maybe soon www.saiu.it) and the FTP owner of:

ftp://ftp.fr.flashnet.it/

There's a /pub/ham directory there. There's not much at the moment but
you may use it if you want. Just send new software under /incoming
including a file which tells what kind of software it is.

Expertise includes anything related to the Internet.

I used to work HF, mostly CW and QRP.

I also love Linux but never used it for ham radio, except for a
satellite tracking software :)

ARES

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and

C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time. The way to join the list server is to send me a short E-mail and tell me what equipment you are using. (Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

I have a large collection technical manuals. Copies are available for the cost of duplication and postage. THIS NOT A BUSINESS. It is done as a courtesy to those needing assistance.

I lecture and conduct workshops on the subject of ElectroMagnetic Interference, primarily related to problems encountered in the Clinical (Hospital) environment. This is a program based on papers of which I am the principal author published in journals related to

Biomedical Engineering. Related to this activity, I have and use signature analysis equipment and, depending on area and time, am available to assist in location and identification of sources of severe interference to radio amateur activities.

Dayton, Ohio E-mail Elmers

Sponsored by the Miami Valley (Ohio) FM Association (MVFMA):

http://www.febo.com/

The Dayton E-mail Elmers service allows new or prospective hams in Dayton and Southwestern Ohio, or even experienced amateurs who are venturing into a new aspect of the hobby, to send an E-mail request for assistance. Volunteer on-line Elmers then can provide a response in the "Elmer" tradition of mentoring new or less-experienced hams.

Today, many hams prepare for their license exams through classroom programs, and the individual Elmer's touch isn't as common as it once was. The E-mail Elmer service is an attempt to restore this long tradition. The MVFMA hopes that the initial E-mail exchange will be the start of an ongoing Elmer relationship in the best tradition of Amateur Radio."

Hams may use the E-mail Elmer service simply by sending an E-mail message to:

elmer@febo.com

and posing the ham radio question they'd like to have answered. Users will get a machine-generated confirmation, and within a few days, they will get a response from one or more of the volunteer Elmers.

For more information, or to volunteer as an E-mail Elmer, contact me at my phone number or E-mail address above.

Keith Petersen W8SDZ

I'm a software engineer specializing in Macintosh development, and I've been a ham since 1982. I was first licensed at age 14, and I now hold an Extra class license. My expertise is in antenna-building and theory, CW (Morse Code), DXing, SWLing, and HF operating practices in general. I also operate mobile in a '96 Ford Ranger pickup. I'd be happy to help any new or aspiring amateur radio operators.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Ken Pulfer VE3PU

jkpulfer@rac.ca
jkpulfer@igs.net
aq627@freenet.carleton.ca

Radio Amateurs of Canada (RAC) Treasurer and Webmaster

(RAC is Canada's national amateur radio society.)

RAC World-Wide Web Page:

http://www.rac.ca/

Callsign E-mail Addresses for All Interested Canadian Amateurs

Any licensed Canadian amateur radio operator can now have an E-mail address of the form:

callsign@rac.ca

This means that you will no longer have to advise all your contacts of any new E-mail address if you change your Internet service provider. Canadian amateurs will not have to keep track of dozens or hundreds of E-mail addresses. Just remembering the callsign is all they will need.

RAC is able to offer this free service thanks to the volunteer help and support of Information Gateway Services (IGS) of Kanata, Ontario, Canada, and in particular the work of Rene Kahle, VA3RDK. Rene developed the E-mail aliasing software, and set up the server hardware (IGS also donates server space for the RAC and ARAS World-Wide Web Pages that contain much useful information for Canadian amateurs).

If you wish to obtain a callsign E-mail address, simply send a message to:

alias@rac.ca

with:

callsign = realaddress

in the BODY of the message.

For example, if my callsign was VA4KP and my real (current) E-mail address was:

ham@qsy.ca

I would put the following in the BODY of the message:

VA4KP = ham@qsy.ca

Any subsequent mail addressed to:

VA4KP@rac.ca

would be redirected by the IGS server to:

ham@qsy.ca

Of course, such mail would NOT go anywhere near RAC headquarters, nor be seen by RAC officials, nor placed in a public database that could be exploited for "junk-mail" distribution. Any E-mail addressed directly to:

ham@qsy.ca

will also be delivered as in the past without passing through the IGS server.

The E-mail aliasing service is currently set up on a trial basis. If it works well and amateurs find it useful, it will remain available for all who wish to use it.

* SAREX

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

I organized and conducted a SAREX in southwest Oklahoma that involved over 3,000 students in 21 schools in seven cities of southwest Oklahoma. The SAREX consisted of an essay contest with the winners being able to ask questions of the astronauts while they orbited the earth. The live SAREX was broadcasts over the Lawton, Oklahoma Public School systems cable television to the public in southwest Oklahoma.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

* Certified, NABER and ANSI 45.2 Level III Engineer

I am a consulting engineer, which takes me to various locations. My home address is shown above and in the call book. I can answer E-mail (as everyone knows) from anywhere that I may be.

Don't know where you are going to use a old horse like myself. I am part of the old and part of the new displine. I have fabricated all my wire antennas which includes the matching device (transformer) and been building equipment for more than a quarter of a century. I also manage to repair all my equipment - when parts are available. I restore early age broadcast receivers and HF transceivers. I know the old Heathkit HW100 and HW101 very well and built a Heathkit 5400 transceiver with matching Power Supply. I have constructed many amplifiers and own a Swan, Collins (S-Line), Kenwood, Heathkit, and Johnson. I am very active in the two meter band.

In addition, I have restored many an old Coleman Lanterns (which is very enjoyable) and also have some American Gas Machine Lanterns (1930's).

THE NETHERLANDS CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems

* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am

still President of the corporation. I was also the local DES
Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the subject header of the message blank and in the BODY, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

I have been a ham since 15. I have been an Extra class operator since age 17, and a VE since age 18. [_Editor's note:_ Possibly the youngest Contact VE ever.]

I am an avid HF QRP (low power) and mobile operator. I have spent literally hundreds of hours installing my mobile station (IC-706 and Screwdriver antenna, plus more grounding straps than I can remember) in my 1995 Neon.

Most of the time I operate QRP CW mobile.

Why? It challenges my operating skills as much as possible, plus QRP is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF exposure still unknown, I don't feel like exposing myself to high-power RF fields any more than necessary, and if 3 watts will do the job, so be it, I'll emit it.

In addition, people are generally amazed when you mention that not only are you running just 3 measly watts output power, and on top of that you're doing it from your car as it's zipping down the Interstate at 65 mph. They just can't believe it's possible that less power than a nightlight is bouncing off the ionosphere and ground three times, and is still able to be detected 10,000 miles away.

I'm here to tell them it is.

I enjoy building kits, and consider myself to be a good builder.

I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as hunting for DX.

I am active with both the Laurel (Maryland) and University of Maryland Amateur Radio Clubs, and operate with both during public service events. I have been the chief HF operator at University of Maryland HF-related events (Field Day and Sweepstakes) for the past three years.

As a Volunteer Examiner, I have conducted roughly 150 test sessions, testing at minimum a thousand applicants.

I have recently given Novice/Technician license instruction, as well as taught a 5 WPM code class. I have been told that I have a knack for describing complex subjects in ways that make them far easier for laypeople to understand.

My favorite aspect of amateur radio is contesting. It drives my station improvements and operating proficiency. I have played around with antennas and made various station modifications to improve my contact efficiency. Along the way I have solved some RFI problems, built many of my station accessories, installed and built some HF antennas, put up a small (40') tower, etc.

I volunteer as a RACES operator in no particular capacity. I help with a few VE test sessions a year mostly representing the ARRL VEC with the Burlington ARC team.

I work as a SRAM design/product engineer at IBM Microelectronics in Essex Junction, Vermont. I have been interested in electronics and computers since a young age, but only got my amateur radio license in 1993 as a Technician at the age of 31. I got to know the code and upgraded to Extra in February of 1994.

I have been a ham for over 30 years and have over 25 years experience repairing HF, VHF, and UHF radio equipment.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

Club Activities, Examinations, and other events in the Omaha/Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also John Seney for FAQ maintenance opportunities). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.3, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message BODY. An acknowledgment message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and

sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the BODY of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and repair), all HF digital modes (including HF FAX), wiring of TNC's to radios, custom switchboxes for TNC's, radio modifications, math calculations, personal computers (DOS, Windows, Networking, and HTML), and of course, on-the-air operation and CW. I would love to work with young students wanting to become hams. I hope I can help.

* BBS's
* IBM PC's
* MUD's
* Packet and Digital Networking
* UNIX

I am currently a mature student at King's College, University of
Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter
the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently
offline due to problems with the telephone line, but is expected to be
back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was

obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

I used to run my own bulletin board system before the Internet came along. I also do my own monthly newsletter called the _Hamband DX'er_ for many years. It is still going. I take care of the ARRL SWL Bureau. My name is listed in any callbook under the various QSL bureaus. I am an avid DX'er of the ham bands with over three hundred countries confirmed. Presently I run my own WWW Page to help others with QSL info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and runs under a variety of software, including:

* Dbase
* Vplus
* Totalham

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs,

Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Via TAPR's FTP site

The TAPR Software Library is now available via anonymous FTP. You can
access the library at:

ftp://ftp.tapr.org/tapr/

Log in as:

anonymous

with your E-mail address as password.

Via TAPR's Listserv (http://www.tapr.org/tapr/html/internet.html)

TAPR maintains several SIGs in various interest areas. To get the
latest list of SIG groups, send an E-mail message to:

listserv@tapr.org

with the subject line:

Request

and one or more of the following in the BODY of the message:

list

for list of mail groups on TAPR.ORG

information listname

(where listname is the name of the mail group)

to request the information on any mail group

subscribe list your_first_name your_last_name

(where list is the name of the mail list you want to join and
your_first_name and your_last_name are your first and last names,
respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet
issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur
digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through
publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Lambda Amateur Radio Club (LARC)

Maintainer, LARC World-Wide Web Page:

http://www.netaxs.com/~skeptic/larc/

Co-Moderator, LARC Public E-mail Reflector:

larc@seta.fi

If you're not already on LARC's E-mail reflector, you're welcome to subscribe, even if you're not a member of LARC. All you ever wanted to know about our E-mail reflector, including instructions on how to subscribe and unsubscribe can be had by sending an E-mail to:

majordomo@seta.fi

with the following line appearing by itself in the BODY (not the subject) of the message:

info larc@seta.fi

The Lambda Amateur Radio Club (LARC), is an international club for gay, lesbian, bisexual and transgendered radio, electronics, and computer enthusiasts (and their friends). Membership is open to all who are supportive of sexual minorities.

Members receive our newsletter, the _Lambda Net News_ each month, learn about our public service activities, keep track of our weekly activities such as Internet Relay Chat (IRC), and follow the planning and may even participate in our fourth LARC-sponsored DXpedition-Caribbean vacation in 1998.

If you'd like to make many new friends, consider joining our club! We'll be happy to mail you an application right away. Just send an E-mail request for an application to:

larc@net-quest.com

OSCAR (Orbiting Satellites Carrying Amateur Radio)

I have been an active satellite operator on both high-orbiting (elliptical and low orbiting satellites (LEO) since 1990. I hold satellite DXCC #85 and I currently have 210 countries confirmed on satellite. I enjoy both CW and SSB and DXing. I am a member of AMSAT.

LARC has sponsored three DXpeditions to the Caribbean focusing on satellite operating.

http://www.ultranet.com/~sstv/faq.html

Alan Larson WA6AZP

larson@net.com
larson@w6yx.stanford.edu

My areas are fairly general, and I teach classes (Novice and Tech, with and without code, and upgrade sessions) at W6YX. My main audience is to the Stanford (University) community.

I am also involved with some less common modes, such as fast scan television and weak signal VHF and UHF.

Zack Lau W1VT

Zack Lau W1VT Expertise: Design of SSB/CW amateur transceivers
c/o ARRL Lab : up to 222 MHz. Design of transverters
Newington CT 06111 USA : up to 10.5 GHz. Basic lossy filter
+1 (860) 594-0200 : design. Developing repeatable projects
zlau@arrl.org : using cheap, easy to get parts.

I'm now starting to look into 24 GHz SSB/CW gear using 10 GHz as a convenient IF.

Especially looking to help anyone wanting to be a QST/QEX author--I can't write it all myself!

I'm with the Team Eifel ARS located in Bitburg Germany. We are a club
primarily set up for American Servicemen and Women in the Eifel Region
of Germany. We provide ARRL VEC test sessions and help individuals,
regardless of nationality, gain a U.S. license. This is accomplished
by providing study materials and teaching. We also provide assistance
in obtaining German Reciprocal licenses.

I have a fair background in packet, a general knowledge of satellites,
and I'm fairly knowledgeable in hiding antennas.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address

is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 (817) 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

I am an NTS operator running an unattended digital (Winlink, latest
version) digital system. I operate a hub station for Eastern Canada
Digital operations, including AMTOR, PACTOR, and CLOVER.

NTS Training for CW, Phone, and Digital Modes:

http://cc.recorder.ca/~ve3bdm/

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet,
as well as system administration of UNIX and UNIX-like operating
systems (with an emphasis on networking, E-mail, etc.). My current
concentration is on writing UNIX based tools (e.g. software for

logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message BODY. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message BODY:

subscribe dx

I am handicapped & spend most of my time at home. My handicap is motor related. I have taught classes in most of the areas listed above. I have been a ham for 25 years. I enjoy talking & working with people. I am a past vice president & newsletter editor for my local radio club. Although not an ARES/RACES member, I have done a lot of disaster & emergency communications. Our local club is VHF-oriented & provides communications for several community events each year. I am active on packet & just recently sold my NODE. Please E-mail or mail me if you think I can help you in any way. By the way, I am married & my XYL is also a ham. I am a Life Member of The American Radio Relay League.

Kids have always had alternative hobbies. Amateur Radio is not for everybody. Historically, only a small percentage of the population expresses any interest in obtaining a license. Point A is nothing new, yet our hobby continues to survive.

>
> B) They do not need to study for a license and do not need
>to learn morse code.

If this is their choice, that is fine. The hobby is better served by those who want to earn the right to participate on-the-air. Others should consider scanners, or CB radio as an alternative. We will not improve ham radio by "lowering the bar."

>
> C) The numbers of hams in the USA is declining.

The chaff is being weeded out. I can recall when there were only 300,000 Amateurs (and only about 3,000 Extras). The hobby survived.

>
> D) Commercial interests want and need more spectrum.

Granted, this is a serious threat. However, there are two things going for our defense.

(1) Amateur Radio has an excellent track record in helping out in emergencies, and it enjoys a good reputation among the American public. Even though most folks don't want to become ham operators, the perception is that we are a good group to have around.

(2) We have a national organization which carefully monitors everything being proposed on Capitol Hill. This "early warning system" is invaluable in helping us head off trouble.

>
> E) Congress needs/wants money (from auctions of radio
>spectrum) to help reduce the debt.

See response under D), above.

>
>I don't see us (hams) surviving unless we can create a long term plan
>to increase the number of US hams. Just to protect what we have now.

I am all for an increase, as long as our goal is QUALITY, not simply QUANTITY.
Look at the number of people participating in the CB hobby, compared to the
modest number of hams. And yet, we are considerably stronger.

Why is it hams have the need to speak for others, as you did, don't your
opinions stand on their own? The fact is you are tired of hearing me, not all
"people."

> Hawke (soon to be a real ham)

My daughter passed the test at age 8, she did not say, "(soon to be a real
ham), she just did it.

Did you give them a shipping address of somewhere other than your credit card billing address? There is no way to verify you are who you say you are in that case. If you asked it to be shipped to somewhere other than your billing address I think I would have had to refuse your telephone order too. To ship it to your billing address should have been no problem.

Hi all,
I have a very nice HF reciever made by the "Hai Hua Electronics Enterprise (China) Corporation, type HHEE RX1001a. It came out of a ship wreck off the Cornish coast and appears to be about 10 years old. Its microprocessor controlled in a 19 inch rack case, with everything from front-end to audio output in individualy screened sub cases.
I have the full manual on the beast but unfortunatly I can't read Chinese. The cct diags are in english and all components appear to be of U.K. origin and the reciever may well be of U.K origin. Could anyone identify this rx and perhaps offer advice on locating an english version of the manual. mny tnks atb

Yes, but what does knowing Morse code have to do with quality?

A story: I recently visited one of the local ham stores. There was an older ham there, and I talked to him for a while. He normally operates CW on HF, but couldn't at the moment because his 12 V power supply had died. He'd made a long trek from somewhere on Vancouver Island to Vancouver to get his power supply repaired. While talking, he commented about the changes in the world and how people used the Internet today instead of radio.

The store staff and I took a look at the schematic and made some voltage measurements, and soon found that the pair of output transistors had failed open. There was base drive to them, so there was a good chance that just replacing the transistors would restore the supply to operation. I also couldn't see any sign of current limiting in the supply's circuit diagram, making it fairly easy to destroy the output transistors if the output leads were momentarily shorted.

It did strike me as somewhat ironic that this gentleman, who it seems couldn't diagnose or repair a very simple power supply fault, is still considered to be of higher "quality", and more desirable in our hobby than myself or the junior salesman from the store. Both of us *could* diagnose and repair the power supply, and I'll bet that both of us could have jury-rigged a battery and charger to operate the radio while the AC supply was waiting for parts. But because we haven't learned Morse code, we are somehow of lower "quality"?

The idea that Morse code testing is somehow an accurate measure of the quality of a ham is laughable, in my opinion.

Note: I didn't tell this older ham that I was one of these youngsters that he was talking about, that I had been using the Internet for 15 years before getting my amateur licence. And I think that hams like him, with interest and operating experience but little technical knowledge, have a legitimate place in our hobby. I just don't like the suggestion that hams like myself, with considerably more technical understanding but no knowledge of Morse, are of somehow lesser value to the hobby.

Well, clearly they don't want to 'become' a general-they want general to be
handed to
them, of course. As far as kids getting into ham radio, kids are enough
like kids were long time ago that any kid who wants into ham radio couldn't
be stopped by a morse code test. And any kid who doesn't sure won't be
terribly impressed by the fact that he doesn't have to take a code test.

yeah !!!!!!!!!!!!!!!!!! I agree !!!!!!!!!!!!!!!! same for Canada
too !!!!!!!!!!!!!!!

I am sure that the number of hams drop to less than 50% after 10 years
(50% of those who are active today).
It already dropped about 90% compared to last year as far as I can see
in Montreal.

One of the ways is to just corrupt ham radio. I don't see any points
of keeping the spectrum for those who want to be lonely in their ham
shack.

>emergency traffic operator.

I think that's because Walt is assuming that ALL
contesters are of the survival of the fittest, shout the
loudest mentality. Some certainly are, but there are
many more that do not go to such extremes.

One of the great benefits of voice communications is that
ANYONE an be pressed into service to LISTEN whereas
the ONLY one that can be utilized for listening with CW
is someone that can decode CW. That helps tremendously
in an emergency situation since the use of voice communications thus
allows non-hams to be used for reception to allow the ham
at that location to take a break or just do other things
while there is nothing being communicated or while
other communicatios involving other sites is going on.

>Traffic handling requires the ability to listen - not transmit - for
>long periods, to act without question upon the instructions of a
>duly-appointed net controller, and to pass often-complex messages
>accurately and effectively with a minimum of fuss.

Yet you don't even need to be a ham to do that.
Personally, I'd like to see more focus on emergency
communications and operation in the current written
tests for licensing.

>It seems to me that all those qualities are anathema to today's
>typical contest operator.

I won't comment on the contesters, I suspect many
would have no problem as effective emergency

communicators while others might be useless.

Masa believe it or not I HAVE THE ANSWER FOR YOU.

Masa, stop by the ATM machine, take out about $300, stop by your local convenient store and buy a '3 pack' of your favorite latex condom. Go downtown and ask where the working girls are hanging out. Best to find one in a bar, the streets are so dangerous these days. Tell her you have $300 to spend, but before you go anywhere tell her you want to explain why amateur radio activity has dropped by 90% in Montreal. After your finished explaining why amateur radio is dying I'm sure she will feel so much empathy for you that she'll invite you over for dinner. The next morning take her out for a nice breakfast, she'll really appreciate it. Tip her $250 and there you go. Trust me Masa, you'll never be the same. You'll be so busy talking to the girls after your "1st time" that you won't want to bother with amateur radio.

I have to agree with Robin and his post. I have built several Ramsey kits
and they do not even touch the quality or completeness of the Ten-Tec kits.
The manuals and cases as well as the quality of the circuit design from
ten-tec are just fantastic. Their 6m transverter is great.

Alas, namecalling begats namecalling. That's the nature of the beast.

>I bet you'll sing a different tune when 6-land crumbles off under the
>ocean and you need help...

Actually, I expect he'll have some nice beachfront property. :-)

(You can't go by the callsign to tell where anyone lives anymore.)

You have a point in that you use what you have in an emergency.
You won't be running to the store to buy what you need, and you
won't be plugging in the soldering iron and building what you need
either. You'll use what you have. But an amateur who is prepared
for emergency communications will have the proper tools for the
job. And that's unlikely to be a QRP HF CW rig.

The reason I say it is unlikely is that one only has to look at the
record of amateur emergency communications in the last couple
of decades. QRP CW has been notable by its absence as an
emergency communications tool of any note. It hasn't played
a role in any major disaster situation involving amateurs.

I've heard of a couple of exceptional circumstances where QRP CW
enthusiasts found themselves lost while backpacking and used
all they'd thought to carry, their QRP CW rig, to attempt to signal
for help. One actually contacted another station (a couple states
away). But a cellphone or a VHF HT would have been better because
it would have allowed them direct access to local help. They didn't
think to bring either, however. They were not properly prepared
for emergency communications in the situation in which they found
themselves. (If either had been in a *very* remote location rather
than in California, a QRP CW rig might even have made sense. But

very very few hams ever find themselves in such extremely remote
situations.)

Hi Folks!

Here in Europe I can not find the manual for my NEC linear amplifier. It is the NEC CQ 301 with 2 times Eimac 3/500Z.

I am in urgent need for the handbook and will pay a good price for a copy. PLEASE help me.

E mail me pa3bbi@wxs.nl and/or pa3bbi@amsat.org.

So, if you _don't_ like CW, then stay on strictly voice comms. Why make
a mess of it for those of us who do happen to appreciate code?

>General you will actually study and pass it!

Well lets see:
A) Kids today have instant on demand wideband worldwide
communications capability to any country (including full motion video)
via the Internet at lower cost than ham radio.

B) They do not need to study for a license and do not need
to learn morse code.

C) The numbers of hams in the USA is declining.

D) Commercial interests want and need more spectrum.

E) Congress needs/wants money (from auctions of radio
spectrum) to help reduce the debt.

I don't see us (hams) surviving unless we can create a long term plan
to increase the number of US hams. Just to protect what we have now.

If you have a choice, you'd surely want to use QRO gear, assuming you
have a generator on hand if the commercial power is out. This would be
no time for a minimalist mind-set.

>I sometimes travel with only QRP gear. Should I take
>along the KW just on the chance I might need it?

If you're en route to a disaster area to work as an emergency communicator
and you want to be assured you'll be useful, consider at least 1/20 kW.

Since nearly all of the amateur rigs we might carry with us today
run off 12 VDC, and since nearly every vehicle has a sufficient
source of 12 VDC, carrying a separate power supply with us is
usually unwarranted. Simply hook it up to your rental car at your
destination. (Realize that most Americans simply consider mass
transit as an inconvenient, but sometimes necessary, way to get
to the next automobile.)

Hi Burt,
Thank you for giving all of us this wonderful opportunity to get some positive attention for the world of amateur radio with your QST to the newspapers.

You see my friend. If I see your letter published it will give me the opportunity to contact the editorial staff at the paper and meet with them. (been there and done that before). At this meeting I will show them some of the wonderful posts that you have placed in the news groups which will pretty much show you as the nut case you are.

At the same time I will bring material to show them them the public service side of amateur radio. I will also show them examples of how amateur radio is an organization of international good. I will show them with examples of how amateur radio is a very positive influence on young people. More then likely, this will result in at least a guest editorial and probably a nice story in the community or features section.

The net results will be an increased understanding of the positive side of amateur radio and will more than likely bring some new new hams into the ranks.

Again, thank you for providing a way for us to get some great promotions of the hobby you so dearly like.

Anyway, tnx fer the fb qso.

As best I can remember I got the call sign WN2GXA during '76 or late '75. Shortly after the FCC changed it to WA2GXA. That had to be in 1976 because I moved at the end of that year and know that the call was changed before the move. Never did get enough air time to get the General since that move involved a new job.

Finally got back into radio and got my paper license in yesterday's mail - KD5DTV. License was issued 3/31/98. Found the call sign on April Fool's day so I checked it again on the 2nd. <g>

Some of those qualities may not be anathema to the contest operator,
at least not to all of them, but contests certainly provide little training for
the emergency communications role, especially the all important
requirement to be able to pass complex messages accurately, rapidly,
and effectively. The real information content of the typical contest exchange
is virtually the null set. (It doesn't have to be that way, but that's the way
current contests are structured.)

Wondered if anyone could give me a good list of repeaters to use/monitor in the Valparaiso, IN area. I just moved here and don't have a current directory. I have a few freqs but a lot of repeaters must have tones set because I can't bring them up. Also would be interested in joining a local clup/repeater.
Thanks for the help.

While I am a class B (50Mhz es up) u.k operator, I still feel able to
comment on the state of 'modern operators'.
Who, in their right mind, is going to spend money on a homebrew rig
which will cost, for components alone, almost as much as a commercial
rig, with usually less facilities and an almost zero resell value ?.

OK, you get the satisfaction of the construction experience but you sure
as h*ll loose out when you want to either rebuild, resell or get out.

And these days my eyes are weak, my hands shake, and what was that new
method of construction.. umm.. umm.. surface mount.. aggghhhh.

73 or 88 as applicable...

p.s. I ran homebrew Xmitters using EF80's, including P.A. stage,
on 50Mhz es 144Mhz until fairly recently

>Thanks for that info! Do you know if they are available for an input
>voltage of 230v 50~ (the European standard)?

All models are switch-selectable to run on 90-132 or 180-264 V, either 50 or 60 Hz at either voltage range. Mine is 15A continuous output, but there are larger ones that do 20 cont/25 intermittent, and 25 cont/30 intermittent.

All are supposed to be sufficiently well filtered for use with HF receivers (i.e. they don't radiate too much EMI) and meet FCC class B. They have current limiting, overvoltage protection, over temperature shutdown. There is a thermostatically-controlled fan that I've never seen come on. The high-current models are available with or without meters.

A friend was given a Yaesu [Vertex] FTH-7008 that was no longer in use at his workplace to see if he could get it to work... we've been trying for quite a while and have been unable to do so. The radio seems to have lost all recorded memories, and we have no idea how it's programmed. What comes to mind is that the radio is plugged into a FT-73R or similar radio and the memories are cloned... Is there any way to program the radio using its existing keys/circuitry?

You've seen a 90% drop in the number of hams in the Montreal area since last year? How did you perform that survey?

Maybe, Masa, when you get your broken Icom 706 back from the repair facility you'll suddenly see an *increase* in ham activity in the Montreal area.

Anyone get a tape of "Pork Butt" carrying on with that
unlincensed, filthy-mouthed slut on 20 meters Monday?

I'm sure "Pork Butt's" wife would sure like to hear it!
The way they were carrying on!

Maybe we're going about this the wrong way. Instead of
using the FCC or fellow hams to try and remove "Pork
Butt" from the airwaves, maybe we should concentrate on
his wife! Wouldn't it be great to see an ultimatum
isued by his XYL? (The radio or ME!) "Porky" would
HAVE TO give up his rig since she is his meal ticket!

Mike

Bill Sohl wrote:

> That anyone who really cares about being prepared for an
> emergency would only carry a QRP rig ith them is amazing.

Far more amazing is the assumption on your part that anyone would
deliberately plan a emergency communications system around QRP equipment.
Why would anyone do that in curcumstances where more appropriate gear was
available?

> You expect the rest of the ham population to be there ready
> to work your QRP station if something happens. That is
> not likly at all. Every emergency that involves hams has
> consistently relied on hams with VHF capability...not QRP
> operations.

This IS amazing......you actually believe that hams PLAN to weather a
disaster with nothing more that QRP gear because they just like to work with
QRP gear only.. it's almost laughable......

> Even those few emergencies that involved
> HF communications, they have all involved typical
> power levels and regular SSB transcievers/stations...NOT QRP.

Well, yes.....as it surely would be in nearly any circumstances. But, say,
I go to visit relatives in central California, by commercial air transport,
and elect to toss in my Oak Hills 100A QRP CW rig, simply because it fits
neatly and lightly in my suitcase when the Icom and it's power supply will
not. Now, I know that central California does indeed have an occasional
earthquake, and some have even been known to cause serious disruption...
In fact, I know that the expert seisomoligists say there is a "Big One"
still to come somewhere in the Golden State. Do I advance-ship my QRO rig
out by UPS Next Day Air, just so as to have a *real* emergency capability
on hand, just in case? Would you? Would anyone in his right mind?

> Dick thinks no one can see a QRP possibility. Sure
> there MIGHT be one person, but that QRP operator will
> not be an integral part of ongoing emergency commuications.

No, probably not..... but he just might be the first or only person in a
disaster area with any communications capability at all....

You Code Phobes just insist on dealing Mother Nature's hand for her don't
you?
Don't you know *It's Not Nice To Mess With Mother Nature?*
"She" will bite you in a very unpleasant way in a very sensitive area if you

mess with her too much. And then you can blame it on "Implementations".

> There are much better equiped hams that will and do
> meet the challenges.

Fer damn sure sir! But I guarantee that if I fired up the QRP rig on one of the FISTS frequencies, I would have near-instant contact, whatever the circumstances.

1.) Hewlett-Packard Model 10543-60010, Quartz Oscillator, 5 MHz, utilized in
many of the Atomic Resonators, e.g., 5062C, 5065, 5060A, and 5061A Cesium Beam/Rubidium Gas Frequency Standards. This metal can oscillator is brand new and in its original HP box.

Condition: Excellent (new in HP Box) Price: $ 850.00

2.) Smith-Florence (Honeywell) Model 951, S/N 150, Precision Potentiometric Micro-Voltmeter and Nullmeter.

Condition: Good Price: $ 250.00

3.) Fluke Model 873AB, S/N 351, AC/DC Differential Voltmeter/Nullmeter, 0 to 1100 Volts AC/DC, +/- 0.02% DC and +/- 0.2% AC.

Condition: Fair (needs repair) Price: $ 100.00

4.) Hewlett-Packard Model 415E, S/N 719-02825, SWR Meter with 60 dB attenuator. SWR and dB scales for use with square law detectors. 1 kHz input frequency.

Condition: Excellent Price: $ 400.00

5.) Tektronix Model 107, S/N 001824, Square-wave Generator and Risetime Source, 3 nS risetime, squarewave amplitude from 0.1 to 0.5 volts into 52
ohms. Frequency range from 0.4 to 1 MHz.

Condition: Good Price: $ 150.00

6.) Tektronix Model 105, S/N 2002, Square-wave Generator, Frequency range from 25 Hz to 1 MHz. Output amplitude from 0 to 100 Volts into 600 ohms with

less than 15 nS risetime.

Condition: Good Price: $ 125.00

7.) Tektronix Model 114, S/N 1751, Pulse Generator, 10 nS Rise/Fall time, 10 Volts output into 50 ohms. Variable pulse period from 100 nS to 10 mS, Duration, with + and - output polarities.

Condition: Good Price: $ 225.00

8.) Hewlett-Packard Model 412AR, S/N 3858, DC Vacuum Tube Voltmeter, built-in probes, manual, and rack mountable.

Condition: Fair Price: $ 60.00

9.) General Radio Model 1605-A, S/N 891, Impedance Comparator.

Condition: Fair Price: $ 50.00

10.) Tektronix Model 190B, Constant-Amplitude Signal Generator with signal/power attenuator.

Condition: Excellent Price: $ 125.00

11.) Eldorado Electronics Model 1607, Frequency Counter/Timer, 0 to 25 MHz in frequency counting mode, 0 to 2 MHz in period measurements (4 ranges),
1.0 uS to 9,999,999 uS in time interval measurements.

Condition: Good Price: $ 125.00

12.) Hewlett-Packard Model 5210A, S/N 1136A02048, Opt. 001, Frequency Meter.

Condition: Good Price: $ 150.00

13.) ARC (Aircraft Radio Corporation) Model H-16, S/N 430, Standard Course Checker, VOR Modulation, with Model P-11, S/N 606, Power Supply and interconnecting cables.

Condition: Good Price: $ 150.00

14.) Hewlett-Packard Model 7030AM, X,Y,T Plotter with time base.

Condition: Fair Price: $ 175.00

15.) EICO Model 235, VTVM, AC RMS and P-P Ranges, Resistance and + and - DC Volts including a 0.5 Volt DC F.S. range, probes and manual.

Condition: Good Price: $ 75.00

16.) Tektronix Model 7A13 Differential Comparator Plug-in for 7000-Series Display Mainframe. Mechanical Readout.

Condition: Excellent Price: $ 300.00

17.) Hewlett-Packard Model 400EL, S/N 536-04003, RMS AC Voltmeter, Analog (average responding) meter with 12 ranges from -60 dB to +50 dB or 0.001 to

300 Volts RMS, 10 Hz to 10 MHz.

Condition: Good Price: $ 250.00

18.) Systron-Donner DataPulse Model 101, Pulse Generator,

Condition: Good Price: $ 275.00

19.) Fairchild (Electro-Metrics) Model EMC-10 Electromagnetic Receiver and Interference Analyzer. 20 Hz to 50 kHz.

Condition: Good Price: $ 350.00

20.) Fairchild (Electro-Metrics) Model ESC-10A, Scan Control Head. Used with EMC-10 listed above.

Condition: Good Price: $ 100.00

21.) Tektronix Model 184, S/N 1490, Time Mark Generator for calibrating oscilloscopes. 21 Markers from 2 nS to 5 Seconds, 1 Volt output into 50 ohms, 7 triggering times selectable with its own output into 50 ohms. stable
oscillator as time base.

Condition: Good Price: $ 350.00

22.) Hewlett-Packard Model 8553B Spectrum Analyzer RF Section, 0 - 110 MHz.

Condition: Good Price: $ 450.00

23.) Hewlett-Packard Model 8556A Spectrum Analyzer LF Section. 0 to 30 kHz and 0 to 300 kHz.

Condition: Good Price: $ 550.00

24.) B & K Model 1076 Television Analyst (Flying Spot Scanner).

Condition: Good Price: $ 75.00

25.) Gould-Brush Model Mark 280, 2-channel strip chart recorder,

Condition: Fair Price: $ 150.00

27.) Hewlett-Packard Model 197A, Options 001 and 008, Display Camera Assembly.

Condition: Good Price: $ 175.00

28.) Hewlett-Packard Model 197B, Display Camera Assembly.

Condition: Good Price: $ 225.00

29.) Hewlett-Packard Model 2401A, S/N 444-01493, Integrating Digital Voltmeter, Rack mountable.

Condition: Good Price: $ 150.00

30.) Victoreen Guarded 10 MegOhm Standard Box, +/- 0.25%, with Triax Connector,

Condition: Excellent (newly constructed) Price: $ 150.00

31.) Hickok Model 14, 0 to 30, 0 to 300, and 0 to 3,000 milliAmpere DC meter, portable with handle.

Condition: Good Price: $ 50.00

34.) Hewlett-Packard Model 423B, S/N 1822A10811, Low-Barrier Schottky Crystal Detector, N-male connector on one end and female BNC on the other end. Frequency range = 0.01 to 12.4 GHz.

Condition: Excellent Price: $ 100.00

35.) Conrac Model RND-9, 9-inch High Resolution Monochrome Video Monitor, all solid state.

Condition: Good Price: $ 75.00

36.) RCA Model PXB-8, 8-inch High Resolution Monochrome Video Monitor, Vacuum Tube design.

Condition: Fair Price: $ 25.00

37.) Hewlett-Packard Model 3722A, S/N 943-00520, Noise Generator, providing two types of random noise outputs in binary signal and a continuous analog waveform of approximately gaussian amplitude distribution. Also, this unit generates pseudo-random versions of the binary and gaussian signals. This HP3722A is a low-frequency broadband noise generator designed primarily for the simulation of random disturbances, as in vibration analysis utilizing
a shaker table and accelerometers. A calibration signal source for a sound and vibration test bench would be another use and application. Brain wave noise-masking generation would be another use. Complete with manual and power cord.

Condition: Excellent Price: $ 950.00

38.) Micronta Model 22-211, Volt-Ohm Meter, 20,000 ohms-per-volt DC and 10,000 ohms-per-volt AC.

Condition: Excellent Price: $ 35.00

39.) Hewlett-Packard Model 350A, Decade Attenuator, 500 ohms impedance, 110 dB dynamic range, 5 watts.

Condition: Good Price: $ 50.00

40.) Sencore Model MU-150, Mutual Conductance/Transconductance Vacuum Tube Analyzer.

Condition: Good Price: $ 250.00

41.) Hewlett-Packard Model 1230A, Logic Trigger Kit, with manual and carrying case.

Condition: Excellent Price: $ 175.00

42.) AlphaLab TriField Meter, Three Ranges, High/Low Magnetic B-Field Ranges, Electric E-Field Range, and Radio/Microwave RF Energy Range, hand-held portable personal dosimeter. Covers Frequency Range from 50 Hz to 3,000 Hz and 50 MHz to 3 GHz.

Condition: Excellent (new) Price: $ 225.00

43.) Beckman Model 6148, EPUT (events per unit time)/Timer,

Condition: Fair Price: $ 25.00

44.) Shibaden Model VM-903U, 9-inch Monochrome Video Monitor,

Condition: Good Price: $ 75.00

45.) Cambridge "Simpli-Scribe" Portable EKG Machine, Model 0-209445, (Genuine Antique Electrocardiograph),

Condition: Good Price: $ 450.00

46.) Hewlett-Packard Model 5011T Logic Troubleshooting Kit, with Model 10529A Logic Comparator, and Self-Test Card, and 10 Reference IC Cards, carrying case and manual.

Condition: Excellent Price: $ 250.00

47.) Tektronix Model 7623A Display Storage Mainframe, with original manual.

Condition: Excellent Price: $ 650.00

48.) Tektronix Model 7B53A, Dual Time Base Plug-in, with original manual.

Condition: Excellent Price: $ 450.00

49.) Tektronix Model 7A26, (Quantity: 2), Dual Channel Vertical Amplifier Plug-in, 100 MHz bandwidth with original manual

Condition: Excellent Price: $ 350.00 each

50.) Tektronix Mobile "Scope" Cart with slanted top shelf and flat bottom shelf.

Condition: Good Price: $ 95.00

51.) Hewlett-Packard Model 3582A, FFT Spectrum Analyzer, ELF and Audio, 0.02 Hz to 25.5 kHz Frequency Range. Original manuals and application notes from HP. Dual channels, dual memory, averaging, various filtering.

Condition: Excellent Price: $ 3,200.00

52.) EMCO (Electro-Mechanics Corporation), Model 6640 (MFIM) Magnetic Field Intensity Meter with probe and calibrating Helmholtz Coil. Original manual, portable (field) operation.

Condition: Excellent Price: $ 12,500.00

53.) WaveTek Model 111, Function Generator with original manual

Condition: Good Price: $275.00

54.) Realistic 32-2031A amplified speaker, 12 VDC required or 4 "D size" batteries.....$ 18.00

55.) Collins 30 L-1 Linear Amplifier with manual (wired for 220 VAC) (Winged).....$ 650.00

56.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

57.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

The unit is called a Monogram Mobile. It is a PC programable, 40 watt,
148-165 mhz, 16 channel, scanning Two Way Radio. It requires Part #
TQ-3375 and TQ-3376 program and programming cable.

Have you looked at the Astron switching supplies? (Assuming that
you need 13.8 V). They are available up to 30 A or so, and are
much smaller and lighter than a linear supply of the same output.

Dave

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I have a complete PRC-47 set that has been given the LSB modification to work on the Amateur bands. It covers 2-10 Mhz, so covers 40 and 80 meters. Comes with (all original and in VERY GOOD shape) whip antenna, dipole antenna, stand, ground plane, headset/mike, instruction manual and power cable. All you need are 2 car batteries (I'll throw 2 new ones in if you pick it up in Dallas) to provide 28 volts DC.

Works great! Really great for setting up in the field or for taking to the weekend house.

Neat and clean unit. Dimentions are approximately 1 foot tall, 8 inches wide and 20 inches long.

These were used as HF rigs in Korea and Viet Nam. Typically mounted on a Jeep, or lugged around by a Marine.

Will sell for $300 OBO. You pay shipping from Dallas.

electronic mail to gkitto @ pobox.com (remove spaces to avoid spammers).

Mike Waterfall (Mike@mwaterfall.demon.co.uk) wrote:
: While I am a class B (50Mhz es up) u.k operator, I still feel able to
: comment on the state of 'modern operators'. Who, in their right mind,
: is going to spend money on a homebrew rig which will cost, for
: components alone, almost as much as a commercial rig, with usually
: less facilities and an almost zero resell value?

Hey, let's join the controversy. Since I'm thinking seriously
about getting back into the hobby after a 20 year hiatus, here are
my thoughts on ham radio.

According to my 1998 Handbook, FCC rules declare five purposes
for the existence of the Amateur Radio Service (paraphrased):

1) Establishment of a voluntary, non-commercial radio service to
be available, particularly, in the event of public emergencies;

2) Continuation of the amateur's contribution to technological
development in radiocommunications;

3) Encouragement of advancing skills in both communications and
technical abilities;

4) Increasing the numbers of trained operators and technical
experts;

5) Promoting internation good will.

It is very clear to me that amateur radio exists only by virtue
of the value it returns to the public at large. Simply being a fun
hobby for a bunch of rag-chewing couch potatos is not justification
for the continued allocation of valuable public resources to hams.

The Amateur Radio Service is a service. Disaster preparedness
is one aspect of service. Technical training is another. Hams need
to make good use of their operating privileges in self-development
of technical expertise through experimentation. They need to pass
this knowledge on to the next generation of enthusiasts. In this
way, hams serve the public interest by participating in general
technical education. This, in turn, helps to insure the economic
competitiveness of the U.S. and other countries that establish
amateur radio services.

I doubt politicians give a damn about preserving the right of
hams operating $3000 imported radio boxes to sit on their butts
gossiping about the weather in Peoria.

I think they sit up and notice when amateurs make a significant, self-funded contribution to general technical education.

In short, the way I read the rules, technical experimentation and self-training is an *obligation* on the part of radio amateurs. It is not simply a question of what radio gives the most features or performance for the dollar. The knowledge gained in the construction of even a simple radio is worth far more than the cost of the components.

By all means, no one should be discouraged from buying a shiny commercial radio. In my humble opinion, however, no one has the right to call himself a ham if he does not aspire to, and make meaningful progress toward, the goal of developing the skills necessary to design and build a functional, usable radio station from scratch.

I guess I'd better go get my flame suit now.

-Henry

I disagree, Gary.

For example, in the most popular US radiosport contest, the ARRL November Sweepstakes, each exchange consists of 5 separate items of information, unknown in advance to the receiving operator. The return message also consists of 5 items, unknown to the receiving operator. This information (total of ten items) must be accurately transcribed to both logs. A good Sweepstakes contester will complete more than 1,000 contacts (10,000 transcribed peices of information) in a 24-hour period. Any single incorrectly copied or transcribed item in the contact invalidates the entire exchange. I would characterize this as "accurate", "rapid", and "effective".

Further, in addition to the message handling skills shown above, contest operators tend to have better stations (especially in terms of reception to "pull out the weak ones") than the average station, giving them an advantage in hearing weak signals out of a disaster area. Since contests frequently cause severe crowding, noise, and mayhem on the bands, contesters also develop above-average skills at receiving under difficult band conditions.

Also, because using every propagation advantage is key to maximizing their score, contesters typically are students of propagation trends and are better able to pick and choose operating frequencies which are optimal for the desired communications path, and being able to predict the next needed band change.

That's why knowledgeable SEC's always try to recruit experienced contesters into their emergency preparedness organizations.

>operation.

Yeah, but you can start the car from time to time to recharge the battery.
I do that when operating from motels. I just run a pair of heavy jumper
cables from the car into the room if I'm setup in there. Otherwise I operate
from the stationary car. If you're stuck in some location where you can't
get the car nearby, you've got a problem with this method. Otherwise you
can work a whole weekend on the gas in the car. You can operate a couple
of hours before needing to start the car for a recharge. Less than 10 minutes
willl have the battery topped back up, and you can operate while the car is
doing that too.

(Note doing that is tough on starting battery life, but hey, if it's a rental car,
you don't care. If it's your own car, use a second deep cycle battery diode
steered off the alternator for the radios.)

>Also, operating CW and keeping a log whilst on the move is kinda
>awkward ....

Some people claim it isn't, but I'm with you on this. The answer is
very simple of course. Park. That's what I do when I go mountaintopping
(of course I can drive to the top of our so-called mountains). I find a
nice overlook where I can park. Set up the antennas, and have at it.
I may spend an entire weekend that way, living out of the car. I suppose
if the car is itty bitty you might want a tent.

Basically what I'm saying is that anywhere you can get a car, you have
a power supply. Since most places I'd consider operating, I can get a car
to the site, I'm set. When I can drive to the site from home, I use my

Cherokee which is setup with dual batteries and has all the rigs nicely mounted. When I have to fly there, I rent a car and just use jumper cables to hook up power. Of course I try to use better than mobile antennas in either case. I couldn't do that if I were mobile in motion, but it is no sweat if you're parked somewhere for an extended period.

This same technique will work with a boat. You can run off its batteries, recharged from time to time by its engine. You don't have to be at sea either, the boat can be moored near your operating location. Virtually every motor vehicle of any kind has a battery and a way of recharging that battery. That's your power supply.

If you're going to operate for more than a couple of days, you may have to break off for a bit and go find a gas station. If you're in the middle of nowhere, carry extra gas with you. If you're clinging to some rock somewhere in the middle of the ocean, you won't have mains power anyway, and you can get generators that output 12 volts directly. That's your power supply.

About the only situation where you might have mains power and not be able to get a vehicle to the location would be if you're operating from the top of a high rise building. Then I'd bring a mains operated power supply. Astron makes some lightweight switchers.

Ham Radio is not the way it was when I was growing up these days when you make a contact here's the way it goes My name is..... QTH is.....Your 559.....please QSL 73s What happened to the RCC club or like one qso I have heard on 15 meters when one station in Brooklyn NY was in qso with a station in Alaska and the NY station asked him if he could stay on the frequency while he call's up his friend to get on the air so he can work you. my friend needs Alaska he is trying to get his W.A.S that grate a W.A.S by appoitment and forget 75 meters that's a ZOO. Lets go back to the old days when the FCC gave the exams.

335. Starting my own station

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-08 00:00:00 UTC
From: Paul Herrera <p-herrera@tamu.edu>
Message-ID: <352BF650.685F1309@tamu.edu>
Source record: 174265
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I'm a new ham (waiting for my technician licence to come in)
and is wondering how to put together my station. As I'm a
student, money is a concern. As of now the plan is to get a
2 meter HT or mobile at this time so that I can get on the air
immediately. Next I would get a HF receiver so that I can
listen to HF bands while I work on code to upgrade to tech plus.
I plan to go to a local Belton Hamfest being held next week.
First on my shopping list is a 2 meter rig, followed by a good
key for CW (and possibly a keyer). At this time I doubt that I
could afford a HF receiver or transceiver.

I've been interested in a kit from Ten-Tec (Model # 1253) which
is a 9 band regenerative shortwave receiver. It is only $59, so it
is in the right price range. I realize that it will not be as good as
the big commercial rig, but it may be a good economical start
and I get the fun and pride from assembling it myself. (I've had
experience in assembling kits, tho' I haven't done one in a while.)
A friend of mine suggested that I jump directly into assembling a
QRP HF transceiver kit, as it will be in my price range and
gives me added incentive to upgrading to tech plus as quickly as
possible.

My question is, whether my plan is good and reasonable,
or whether there are any better alternatives. Thank you for any
advice you can give me.

Over the past 30 or so years, I have often used my tv antenna mast as a support for a dipole. It works great as long as you are not using ladder line for any part of your feedline. Watch out for TVI if you are still using it for tv reception.

If you don't have such a mast, try a 2X4 nailed to the eave of your roof or strapped to your chimney or splurge and buy a commercial roof tripod.

Hi All,

The 220 MHz. Spectrum Management Association of Southern California
will hold it Spring quarterly meeting
at the Ventura County Sheriff's Station, on Saturday April 18th,
starting at 9:00 AM.

Directions: Ventura Freeway (US 101) to the Moorpark Freeway (State
23) junction in Thousands Oaks
(approx. 15-20 minutes West of Woodland Hills). Travel North on the
Moorpark Freeway to the Olsen
Road offramp. Turn right (East) on Olsen Road. At the first signal,
turn left into the Sheriff's facility.
Coming from the North, take the Reagan Freeway (State 118) to the
Moorpark freeway (State 23)
in Moorpark. Travel South to Olsen road and turn east. Talk-in on
N6CFC on 223.96 (pl 141.3)

Many important issues will be discussed this time around. Hope to see
all who are interested in
220 MHz. at the meeting.

73 de "Jug" WA6MBZ,
Secretary of the 220 SMA,
wa6mbz@sbarc.org.

The FTH-7008 radio is programmed by an IBM PC with Yaesu software. It
is only possible to be cloned from another FTH-7008 radio. There is
no lithium battery to run down so it is unusual for the memories to be
gone. It may have a EEPROM problem or a CPU problem. It may be best
to send it in to Yaesu for an estimate of programming and/or repair.

Best Regards.

Rich

Below is an exchange between the President of the ARRL and myself.

So can you tell me why why I was removed as a VE?
If you have forgotten the correspondence, it is posted on my WWW page,
http://www.geocities.com/WallStreet/5169/arrlve.htm
Bart Jahnke removed me for no identified reason.

The code-free tech license was supposed to help populate the UHF bands.
Filling those frequencies has nothing to do with upgrading or
restructuring, unless you're proposing that we create a written-free
ticket, too, in order to fill that spectrum.

I have a Yaesu FT-50R, after fully charging the battery, without using the radio, after about 2 days the battery is dead, if I leave it off the radio, it is just fine. Is this a common problem with these radios, or is it just mine. I remember hearing something about this problem, and a solution for it.

Would someone please tell me what to do about this.

Thanks,

Scott (N7ZTI)

> I disagree, Gary.

As do I. I see no reason to presume that a contester would not know enough about radio to realize that the skills one might use in a contest are different than the skills one might use in an emergency. My neighbor next door is #59 in the stock-car, figure-eight enduro at a local track. He drives quite rationally on the street.

> Further, in addition to the message handling skills shown above, contest
> operators tend to have better stations (especially in terms of

> bands, contesters also develop above-average skills at receiving under
> difficult band conditions.

I can attest to this from my own experience. I have run 10 milliwatts in the CW sweepstakes. A number of these operators were able to dig me out on a very busy band and copy the complicated SS exchange -- to the tune of 54 contacts in 30 sections. These are good operators, who can use those exact skills, if needed.

> Also, because using every propagation advantage is key to maximizing their
> score, contesters typically are students of propagation trends and are
> better able to pick and choose operating frequencies which are optimal for
> the desired communications path, and being able to predict the next needed

> That's why knowledgeable SEC's always try to recruit experienced contesters
> into their emergency preparedness organizations.

I suspect that SECs will recruit anyone willing to do the job. They probably have a harder time filling empty slots with willing volunteers than they have trying to weed out the one or two contesters who are not able to adapt to emergency operating practices. :-)

What is the difference if some kid does it or all the ham radio trash
you associate with? WB2OTK,N3CND,W4NTI,KC4IF have been doing that crap
for years.How can you propose cleaning up ham radio when your group of
retards is the main problem? Your the problem,not the solution.How about
getting that trash to stop their intentional jamming? The rest will take
care of themselves.

The Vertex FTH-7008 is programmable across a cable from a PC.
Under the rubber of the PTT there is a key. Changing the possition of
the key, the handy enter in programing mode. I don't know if it's
possible to clone from another type of handy.

I used to live in the area. It is not antenna friendly. However, Florida being what it is (flat & a great ground plane), I found that attic dipoles work very, very well. If you don't mind a minor commute, there is a subdivision called "The Acreage" a few miles west of West Palm Beach, where there are no antenna restrictions at all. When buying into most other developments, you must sign away your constitutional rights and put up with attic antennas under albiet excellent transmission and reception conditions.

This constant attempt to lower standards really bothers me. If it's hard to
achieve, lets change the requirements so it's easy instead of learning the
required skills to pass the existing exam. CW is a dead and dying mode that
no one uses anymore, etc, etc, etc... All Crap!

What does the internet have to do with anything? Nothing! This is radio...
As to the numbers declining, I want QUALITY... Not Quantity! THIS IS NOT CB!
You have to earn the right to play and 5, 13, and 20 WPM are the requirements!
I think the "NO CODE" classes were/are a mistake! Have you listened to 2M lately...
Sounds like channel 19 CB... And alot of these folks dont care to adopt amateur

operating techniques and improve themselves , their happy acting like idiots.

If you want to lower standards and give it all away, it will become 10 times the mess CB is now. I dearly love this hobby and will do whats neccesary to protect it from what you offer. If by chance it does decend into the anarcy you propose, I will have to abandon the hobby as a lost cause.

You dont get it do you... Amateur Radio is supposed to be better, the best! What you Propose will make it nothing but high powered CB crap, The Worst.

If your not willing to upgrade your thinking as well as your privileges, then go back to CB and leave Amateur Radio alone.

Giving away the store at the expense of existing users is not the answer.

What does Canada have to do with the topic of modernizing the USA ham
license structure? I fail to see the point.

Well lets see I did upgrade to EXTRA Class last year, what class are
you?

>Giving away the store at the expense of existing users is not the answer.
There will not be any store if our numbers start to drop very much and
we do not replace the hams who leave.
Many companies waiting to take our UHF spectrum (but I guess hf hams
don't really know much about or care about UHF but that is where the
future is at).

Hey Graham,

Did you happen to send an e-mail to his father before flaming him all over the internet?? It only took me about 15 seconds to find his complete e-mail address as well as his home address. All I needed was the call sign.

It sure is easy to just jump right into a newsgroup and complain instead of doing a little bit of searching and getting to the root of the matter. All you did with your post was piss off the hams in PA.

What's funny is the next time you talk to someone and this subject about this kid comes up and you say "Well, I posted a message on my newsgroup complaining about him." and whoever you're talking to is going to think "What a complete moron this guy is."

I usually don't get involved in these spats in the newsgroups but, yours really must have hit the wrong nerve.

Have a nice day,

Paul

Actually, people for MANY years have had lots of choices other than
ham radio.

As I recall, telephones have been pretty common in homes in the USA
for something on the order of 50 years. I believe they were invented
over 100 years ago.

Yet people continue to mess with ham radio...why is that? With so much
communications available, why bother?

Why did anyone get a ham license when there was a telephone with world-
wide capability hanging on the wall?

Well?????

Anyone?

The proliferation of OTHER communications methods means that people
who are GENUINELY interested in ham radio will become involved.

These are not people with a "passing" interest, but people who are
genuinely interested...people who are good for the service...people
who will be active and will experiment and will operate...

The Internet makes FINDING out about it that much easier. I've
gotten contacted by dozens of people who just "discovered" ham radio
via Internet (and had to know more) in the past year.

I feared for ham radio because of the Internet...once...

They are independent entities, yet work synergistically.

>and effectively. ...

One wonders just how many distress situations, with lives at stake,
Gary and Walt have heard on the amateurs bands in which they knew
for certain that the participating operators were not contesters.

Since the amateur and maritime services are alike in many ways (most
of our prosigns and procedures come from that service) let's focus
on the operators from that service for a moment. Every six hours,
everyday, decade after decade, a worldwide "pile-up" occurred on
the maritime bands as every ship at sea around the world raced to
contact us and other shore stations in order to pass their time-
sensitive weather observations (WX OBS). These six-hourly pile ups
would make an amateur operator tuck his tail and hide. To outsiders
(such as Gary and Walt) the maritime bands surely sounded like bedlam.
Yet, to those of us who participated in this four-times per day
ITU-sponsored event and who thoroughly understood the mechanics of
of such communications, the situation was very orderly. After only 20
minutes past the start of the OBS hour, all WX had been passed, and the
bands resumed to their normal state for another 5.5 hours.

(Let's pause to allow Walt and Gary time to again consider just how
many distresses they've heard on the amateur bands in which they
knew for certain that the participating operators were not contesters.)

Now these same maritime ops who played in pile-ups, which would cause an
amateur contester to blush, were the same operators who displayed the
utmost circuit discipline during maritime disasters in which a worldwide
silent period would be imposed on the distress freq'y. Imagine that.
They'd participate in the WX OBS "contest" every six hours yet when it
came time for them to perform in an emergency, their ability was flaw-
less. I should know - I worked these fellows on the maritime bands
for four years, day after day.

It would be nice if those who have no facts nor experience in certain matters would cease their speculation in regard to such matters.

72.5,
Jeff KH2PZ (former US Coast Guard radio officer)

The continuation of the Amateur Radio Service will not depend in any meaningful way on headcount; it will depend on our value as measured against PICON.

Even if we increase the number of licensees by a factor of 10, the headcount is still far too small to show on political radar.

By the way, where is my "Lifetime Membership" certificate in USARA?

My last post was cut off for some reason.Yaesu knows abou the problem and is fixing it under warranty.They also have an updated
shorter power button that they have been sending out for free,or you can send it to them.
I have one correction on my previous post.THE CORRECT
CURRENT DRAIN IS around .20mA or 200uA. Mine was
.25mA or 247uA.If you leave the meter on it probably will drop to
.20mA because mine started to.

> First on my shopping list is a 2 meter rig,

You should be able to get some good prices there. If you can, go for the mobile first and then the HT. You can set up the mobile as a home station without too much effort. At this point stay away from the low power HTs that are being offered at most hamfests for low prices. There are several new hams in our area that have gone this route and most of the time they are very noisy. If you must get a ht for your first rig, get one that will give you 1-2 watts on it's battery and at least 5 watts when running off of 12 volts. If you are going to use it mobile be sure to get an external antenna.

> followed by a good
> key for CW (and possibly a keyer).

To start out just get a cheap straight key. You can get one as a key/practice oscillator combo to practice sending. Remember you probably won't have to send when you take your test. When you get on the air using CW try using the straight key for awhile. It is actually easier to use a straight key at low speed cw then a keyer and it will help you develop a nice clean fist.

> At this time I doubt that I
> could afford a HF receiver or transceiver.

While your at the swapfest check out the older tube type cw/am transmitters. Just make sure they work before you buy them. Some of them can run into bucks trying to buy new tubes for them.

> I've been interested in a kit from Ten-Tec (Model # 1253) which

> and I get the fun and pride from assembling it myself.

YES! You are correct in that it won't have all of the features of a lot of the other receivers being sold. But, it will be a ball to build and use. Combine it with a moderate transmitter and you will have your first cw station.

> A friend of mine suggested that I jump directly into assembling a
> QRP HF transceiver kit, as it will be in my price range and
> gives me added incentive to upgrading to tech plus as quickly as

That is also a possibility. But it will be easier to make your first contacts running a little more power on HF.

> My question is, whether my plan is good and reasonable,
> or whether there are any better alternatives. Thank you for any
> advice you can give me.
>
>

Sounds like a good approach to me Paul.

You also might want to check into getting one of the Ten meter ssb/cw rigs for your first hf rig. This will let you operate on hf phone and cw. Ten meters will be getting very good in the upcoming months and years as we go into the next solar cycle.

Hello all,

The Suffolk County VHF Traffic net is a net that is focused on handling messages into and through the Suffolk County, NY area. All stations are welcome to check in regardless of past traffic handling experience. We meet on the SCRC
repeater system nightly, which is the following:
145.21 -shift 136.5 PL-Kings Park, NY
145.21 -shift 103.5 PL-West Islip,NY
145.21 -shift 114.8 PL-Selden, NY
223.68 -shift 136.5 PL-Selden,NY
446.625 -shift 110.9 PL-West Islip,NY
This is a simulcast system, so anything said on one input goes out on 3 bands. Nobody is under any obligation to handle traffic, and our net manager, Steve, KC2ACL, will provide all information. The net meets each night except Sunday at 8:00 PM on the repater listed above

Hope to see you there,
73-Ken, KB2REZ
kb2rez@ny2s.#nli.ny.usa.noam

While that certainly *could* be done, the fellow who lurks on
frequency for several exchanges to bone up on the information is
not a good contest operator, and not who we are talking about
when we say that *good* contest operators are excellent candidates
for good emergency communications operators.

You might also want to look for issues of CQ from 1968. I don't have the months handy, but there was a two part article on using the grid dip meter. There have been plenty of other articles about using the GDO in the ham magazines over the years, but those CQ articles seemed to be more extensive.

I thought Rufus Turner wrote a book about using GDO's, though it might have been another author. Simply looking for older books about test equipment (like at a used book store or hamfest) might turn up something. I can't find it now, but at a used book sale I picked up a book about test equipment and it included ways to use the GDO. It wasn't a chapter about the GDO, but as it went through various tests and measurments, it would include how to use the GDO. So if the topic was signal generators, it would have bit about GDO's. If it was capacitance measurement, the GDO would be included. And so on.

I often hear how the Internet will cause the demise of ham radio. I recently have done a little exploring of the IRC channels (chat rooms) and found most to be total garbage. I even got called an obscenity in a ham radio channel from someone in Australia. (DX garbage?) We certainly have our bad frequencies, but over 95% of them are still cordial. I won't be trading my radio for a chat room anytime soon. I have deleted my IRC client, good riddance.

I would like to learn morse using the Koch method. The Ham Radio FAQ says taht a good way to work the Koch method is with a morse tutor on your PC: to have the PC send you two characters many times and try to distinguish between the two, then when you get your accuracy up add another and another and so forth. Only problem is I haven't been able to find a program that adapts correctly to the Koch method. Any suggestions on what programs I can use and where I can find them?

IMHO, things have been exactly that way since at least 1963, when I was first licensed. In your descriptive list, however, you forgot to include the excuse involving the XYL. This seems to happen more on CW than it does on voice or other modes, from my experience, perhaps because for some, it is a challenge to complete the QSO at all. At 5 wpm, many tend to determine that they have used up all of their available QSO time on the basics, so the QSO comes to a routine conclusion. At 40 wpm, I have had a number of enjoyable conversations.

>What happened to the RCC club ... ?

In between "canned" QSO, I have found that the ragchewer is still to be found.

>Lets go back to the old days when the FCC gave the exams.

In 1963, and then in 1973 when I was relicensed, the FCC gave the exams. There were cookie-cutter QSOs then, too. I think any change seen in this area is more of a social change than one related to the examination process.

>In fact, I know that the expert seisomoligists say there is a "Big One"
>still to come somewhere in the Golden State. Do I advance-ship my QRO rig
>out by UPS Next Day Air, just so as to have a *real* emergency capability
>on hand, just in case? Would you? Would anyone in his right mind?

Bring what you want. I travel with an HT which probably
would offer far better usefulness in an emergency. Odds are
that if a disator struck where I was visiting I'd be far more
concerned with the health and safety of my family and self

before even thinking of going on the air.

>> Dick thinks no one can see a QRP possibility. Sure
>> there MIGHT be one person, but that QRP operator will
>> not be an integral part of ongoing emergency commuications.

>No, probably not..... but he just might be the first or only person in a
>disaster area with any communications capability at all....

Not likly at all. Why would a QRP op tend to be the ONLY
ham in the disastor area?

>You Code Phobes just insist on dealing Mother Nature's hand for her don't
>you?
>Don't you know *It's Not Nice To Mess With Mother Nature?*
>"She" will bite you in a very unpleasant way in a very sensitive area if you
>mess with her too much. And then you can blame it on "Implementations".

Unfortunately, actual emergency preparations and history
indicate that QRP and code haven't had a need at all in such
cases.

>> There are much better equiped hams that will and do
>> meet the challenges.

>Fer damn sure sir! But I guarantee that if I fired up the QRP rig on one of
>the FISTS frequencies, I would have near-instant contact, whatever the
>circumstances.

At the same time that the area hams who actual made real
emergency preparations were also on the air implementing
and using their communications in an integrated fashion
with area emergency forces.

Hansl:

7 million hams wouldn't generate a blip? I would think that if we had
that many total, and approximately 25% of them active, we'd be able
to pretty much rest assured of holding onto a fair chunk of our VHF/UHF
spectrum!!! (Note to the no-coders: our HF spectrum is in a condition of
negative threat; we'll probably get MORE thrown at us! The commercially
viable, and threatened, spectrum is mostly above 50 MHz, where we've had
no-code licensing for over 7 years now!)

Try this: disassemble radio and remove the coil cans in question, one by one, dont mix em up!. Use a solder sucker iron or you will destroy them! The "screwdriver" slot is also on the bottom side, which IS accessible on those coil cans! Simply unscrew them, throw away any crumbly bits, and reinstall them upside down. (The cores, that is). Realign the set and your'e back in business. Almost every one in my HTX'es is very near, or at, the top of the metal housing, so that is where you should probably set them when starting the alignment.

if you have any quesitons about amateur radio, visit my web site at:

http://www.radiotelephone.net/amateur/

yes, it has some info about 80m band in Japan as well as JA license
structures.

good luck !!

Hi All,

I have 2 Radio Boys books. One is titled The Radio Boys with the Forest Rangers by Chapman and the other is Radio Boys Cronies by Whipple and Aaron. Question? They appear to be from 2 different series. Can anyone tell what some of the other books in the series were and do they have any value as collectables.

Thanks,

Conrad W8MHH hoff@america.com

Larry,

The eventual continuation of the amateur radio service, both here and globally, will *not* be decided by a headcount of licensees, or even by a census of active users. It will be decided by the publicly-perceived value of the service *we* provid as opposed to the value of some other service which might be provided by some other potential users of the bandwidth. This "value" might be "PICON" or it might be commercial.

Hi,
My name is Brian Crow (K3VR) and My wife is Susannah (N3XBU). For some reason I feel compelled to reply to this slander/defamation/libel aimed against me by Graham Dyer (callsign unknown).
I have informed Mr. Dyer that I have no son, and have never allowed anyone to operate my equipment unattended at any time. I do not operate my station on 14.313 or 3.901 for reasons obvious to anyone who has listened there.
As for accusations about tapes and jamming played on my station by my (as yet unborn) son, they are patently false and ridiculous. My reason for responding is to assure people I regularly do business with, that I am aware of the defamation and will take appropriate legal action unless I receive a timely apology right here on this newsgroup.

Brian K3VR

Thanks Robert,

That problem has been driving me nuts. I've had mine about a month and I too thought it was my nicads. Couldn't put my finger on it but had'nt gotten all that serious either. I will confirm this and let you know how it goes.

The power button is also a design flaw in my opinion. Good radio, stupid design on that feature. I solved that one with some high density polypropyline foam with adhesive on one side. I didn't use rubber foam because of the odd odor. Basically cut a 5/8 inch circle and then cut a 1/4 inch hole in the middle of it. Took a little doing with an exacto knife but I did it. Now, I think I would make an elongated oval say 1.5 inches long with the same 1/4 inch hole near one end and place it over the power switch. Turns out, if you hold it in your left hand it feels pretty comfortable. Oh by the way, the foam was about 3/16 inch thick. In my brief case it kept the power from coming on by being bumped by a loose object. The only down side is that the adhesive seems to be letting go of the foam. I'll try another type and let you know. The doughnut like pad seems to have done the trick for now.

Thanks for your posting '73

Roger

Sorry Burt but much to your surprise most newspaper folk are net literate and they will have not problem pulling up your old posts for themselves. But I really doubt I will ever see your letter in print in the first place.

> What so called public service have YOU ever performed?

Well I guess you could say that my first public service work in ham radio started when I worked hf traffic for the Alaskan Earthquake. I have worked ARES, RACES and various other traffic nets. Over the last 35 + years I have worked communications during most of the local emergencies. Including several major floods, several forest fires, numerous weather related problems.

I have to admit I did not do much on hf for several years because of lack of gear and time to put up a station. But I got a new hf rig about 6 months ago and am now back on hf with portable and emergency power capability and have started checking back into several hf traffic nets.

Can't wait for field day!!!!!!

> As far as international good will, hams are ugly Americams, stomping over
> lower power stations.

Uhhhhh, Haven't spent much time on hf have you Burt? There are still a lot of "power" stations on 20 just like there were 40 years ago. But, try 15 or 17 meters for some fun dx. Not a lot of KWs banging around there. Actually maybe you could give us a few examples of those ugly American station stomping over those low power stations.

> That is total BS. There are few young people who care the least
> about the boring world of HAM radio.

Well Burt old buddy, I was at a VE exam a few weeks back and a good portion of the people there were under 18. We had another poster here talk about taking a whole group of young people through a class, and all of them became hams. Maybe it is just the young folk around you Burt. Have you tried to show them the positive aspects of ham radio or do you just bad mouth it all the time the

same way you do here?

>
>
> > Anyway, tnx fer the fb qso.
>
> You live for the cliche. And you LIE.

You need to relax a little and enjoy life Burt. Please tell us how I am lying Burt?

But anyway, tnx agn fer the fb qso and c u ltr........

you are talking about text chat. text chats are completely garbage.

how about voice chat ?? there is something called Internet Phone or
something which you can pick someone who you want to talk to... with
similar interests etc.

yes, you can talk to someone in distant without using radiowaves nor
paying long distance phone calls.

I guess it is usual for CW operators to jam the freq when you hear CW on particular freq.

Today, I heard 10s of CW stations on the same frequency. I am sure they can hear other stations but they just want to be selfish to get the stations to contact with... no matter what... just jam the freq !!!!!

Hi, I'm a Canadian Amateur (VE6LKC) and I am moving to Dublin, OH later this month to start a new job.

I would like to know the region that Ohio is in, so I can correctly ident when I get there.

And, I would like to know how I would go about getting an FCC callsign.

I would also like to know about the local club and some frequencies (2m/70cm) for voice and/or packet.

Aside from the serial number, they're all *constants* which
the sending operator can have pre-canned. And the format is
standardized so the receiving station knows exactly what
information to expect. If he does miss part of the exchange,
he can just hang around and fill in the holes when the other
station makes its next contact.This is not the same as delivering
a Hazmat query or response, reporting the location of trapped
persons, or handling a list of urgently needed medicines and
supplies for a shelter, or handling a list of survivors with details
of their injuries and requests for field treatment advice.

Contest exchanges, even this more elaborate than usual one,
are nowhere near the sort of messages you'd be handling in an
emergency situation. In the last two weeks, metro Atlanta has
been hit by two killer storms spawning several tornados. In both
cases, amateurs have risen to the occasion of handling the emergency
and logistical communications needed during and after the events.
None of the communications handled even faintly resembles contest
operation.

The most effective communications has been done by tightly drilled
nets, operating in a quiet, orderly, and efficient manner. The only
chaotic and contest-like activity was by operators who hadn't prepared
or drilled to learn how to do effective emergency communications. They
were quickly and firmly excused from the nets. Fortunately, most of them
promptly obeyed net control and went elsewhere.

That elsewhere turned out to be a wide area repeater whose sponsors
have touted it for emergency communications. But the untrained and
undisciplined zoo that gathered there were anything but effective in

handling emergency communications. They really did sound like
typical contest operators. They all appeared to *mean* well, but they
didn't know how to *cooperate* in order to *do* well. They appeared
to fall back on their training (which anyone does in an emergency)
and attempted to use their competitive skills. The number of doubles,
triples, tailending, etc heard on that machine was extraordinary.

I was somewhat surprised, and very gratified, that there were almost
no instances of deliberate misbehavior, even on the zoo machine.
But the amount of cluelessness was all too typical. Emergency
operation is not contest style operation, and contesting doesn't
prepare one to be an effective emergency communicator. One
needs specific training, drill, and net discipline to be an effective
part of an emergency communications *team*. Those who bothered
to get the training and drill before the event were *ready* when the
fecal matter hit the air mover. They deserve every bit of good press
they are getting.

Fortunately, the wide area machine mentioned went off the air
shortly after the tornados hit (and isn't back up as of this posting,
I'm not sure why, *our* machine on the same site never missed a
beat), so the press didn't get too big an earful of that CB-like chaos.
(In fact I shouldn't slight CBers that way. A number of REACT teams
behaved very well too, and the fake southern accents were mostly
replaced by real southern accents with concern for their neighbors
in their tones.)

As an aside to those in broadcasting, the EAS worked very well this time.
The word was gotten out to the public very quickly and accurately. The
18 deaths last time were very sobering to all concerned, and every effort
was exerted this time to make sure people had proper warning. The weather
service perhaps even over-reacted with an almost constant stream of
activations and notifications. (I'd rather they do that than not activate when
they should have, as happened last time.) I'm pretty pleased with the way
everyone reacted to this emergency, but there are a lot of hams who could
have done even better if they'd gotten the proper training.

One of the tornados, an F5, came within less than 2 miles of my house.
Huge steel electrical transmission towers were strewn all over the place
as if a kid had dumped his erector set across the landscape. It is very very
scary to hear that freight train sound when you know there aren't any train
tracks nearby. Fortunately, I didn't take any damage, not even a stray limb
down in the yard. I did take a number of direct lightning hits, but I've been
practicing what I preach about lightning mitigation techniques, and suffered
no damage from that either, even though all the radios were hooked up
and operating.

Hi Worthlin,
I have have found the same thing. Like newsgroup they tend to gather people who only want to flame and create chaos for everyone else. There are even bot programs out that lets a person flood IRC chat groups with messages without being in it.

On the other hand have you ever checked out packet clusters? They can get boring at times but they at least usually stay on topic and tend to stay away from flame wars.

I bought a HTX-100 at a hamfest and found out that EVERY
SINGLE COIL had its ferrite slug damaged or pushed to the
bottom. I'd like to find someone who has a HTX-100 that's
dead because of semiconductor faults. I have contacted
Tandy and found that they stopped restocking the replacement
parts for this thing a couple of years ago. If you have a radio
that may fit the bill please email me with your price.

I have looked into removing the coils and unscrewing them from the
bottom. Some can be done others actually have a bottom that
prevents ANY access. To make matters worse the wingnut that
messed this radio up didn't stop at just breaking the ferrites. He
went so far as to drill out the broken ferrites and totally trash the VCO
coil as well as a few others.
The point has been made that the HR 2510 was also made by Uniden
and probably has the same coils. Well that's true but in my case the coils
that are trashed aren't used in the 2510.
I thought of buying both service manuals and comparing parts but
at a cost of >$50 for a radio that is only worth $80 I thought again.

The solar flux is above 140!

20 meters is open well into the night!

15 is open during the day and into the evening!

If you haven't upgraded, NOW is the time.

If you have, it's time to GET ON THE AIR!

This is the stuff we have waited for - and it's only getting better!

(the sunspot peak isn't predicted to occur until around 2001)

I thought it would be a nice conversion to 10m. I have a CBer
at church who said it somewhat cheaply made. Some of the buttons
break easily. Plus if converted, you work in banks of 40 channels.

That's called a pileup, formed when a lot of amateurs wish to make
contact with a single station, usually in a rare location.

It happens on SSB, AM, and RTTY as well. At least on CW, each station
only takes up a few hundred Hz of bandwidth, making DEALING with the
pileup a little easier for the rare station.

Hi Burt,
And you say you don't make blanket statements against amateur radio?
NOT!!!!!!

I don't know what you have been listening to Burt, but in the last week I have heard some very interesting conversations.

Just last night there was a computer net on a local repeater. This is a fairly new net and it is run by and checked in by a lot of younger hams. There was a lot of useful discussion and information on computers in general and some pertaining to their use in amateur radio.

The night before that I there was the Edge Of Space Sciences net. This is a group of folk that launches high altitude balloons and use amateur radio to track, control, and receive video and data from the scientific packages aboard the balloon. The scientific packages are usually provided by college or high school students. I've been to a few launches and they are very fun. The fox hunters do a great job of tracking, and retrieving the balloon after the flight. They have started using APRS positioning. In addition to vhf they have a hf net during the launch to get signal reports and tracking information from distant stations. Pretty high tech and pretty neat stuff if you ask me.

Amsat has a net on every week that has lots of interesting things.

Of course Burt, there were a lot of QSOs that I heard that did not really have much interest for me but then I really don't expect a QSO that I am not involved in to be a form of entertainment for me. And I really don't care if others that are not in a QSO with me are interested or not.

And if you find what you hear garbage why not get on the air and start up some QSOs that would not be garbage to you?

Tnx Fer the FB QSO

One should also remember that the ones who really like CW would probably
have narrow filters meant for the mode. What might appear to be bunch of
stations on one frequency might turn out to be that you are listening with
too wide a filter in your receiver.

Well, let's see Jeff. We have 500,000 hams on HF, and they don't "fill"
2 MHz of HF. Why would someone expect 200,000 Techs to "fill" 20 or so
MHz with communications which are pretty much limited to line of sight?
On the other hand, have you checked into obtaining a coordination for a
440 repeater pair in Southern California lately?

A shorted or reversed cell can cause this. So can can cell depression.

Cells can reversed if you ever over discharged the battery. Depression
is common result of chronic overcharging - do you (or did you) leave the
battery on charger for long periods of time?

I am sure most have seen the battery packs for HTs that use disposable AA cells. I was wondering if anyone knows of an aftermarket battery or accessory manufacturer that makes similar packs for "commercial" hand helds. I am particularly interested in such for the Motorola HT600 and MTX810.

I am aware of several sources of alkaline battery packs for these, including Motorola. But these are of "throw-away-the-whole - battery-when-its-dead" design. I would like to be able to reload them with fresh Duracells when they are done.

Thanks

Walt Davidson <no.junk.mail@thank.you> wrote:
>US Coast Guard Radio Officer (redundant) ???

Not at all. The USCG does much more than just listen to radios. They're our maritime law-enforcement arm, enforcing *all* federal laws (water-related or not), including drug interdiction, customs, immigration, fisheries, and anything else Congress feels like tossing at us.
Other duties: Aids to navigation (lighthouses, buoys, ranges, coastal radio navigation beacons), ice-breaking in the Alaskan and Great Lakes shipping lanes, search and rescue (over-water and inland), water pollution investigations, maritime safety (which the boaters hate - "Attention Skipper - Prepare to be boarded for a safety inspection!" [which is really a guise to search for drugs]). They also inspect each and every commercial ship entering and leaving US waters, and every ship under construction is visited regularly by USCG engineers to insure all federal standards are being met. Our ships also provide a platform for oceanographic researchers.

Of course, when ordered by the President, we become a component of the US Navy, so our military readiness has to be on par with that of the Navy's. Sad to say, the Coast Guard lost more men per capita during the Viet Nam war than any other military service. The same sad fact is true even during peacetime. Whether it be rescue swimmers dropping from helicopters in order to save someone from dangerous surf, or fire boat Coasties battling a water-front or shipboard fire, we do dangerous work.

I could list dozens of other duties, but I'm certain you get the idea.

Semper Paratus,
Jeff KH2PZ (active duty `76 to `80; reserve `80 to present)

The AH-100 is one of the best made units you will find anywhere by any company. The Buttons are all standard push through to capacitance point design. Like 99% of the radios on the market today. No way for them to break. I think your CB friend needs to show you what he is talking about. Also the company backs these products with a full 1 year warranty, handled through the dealers or direct to the factory. You will not find a company that supports it products like this in the big 5 Amateur radio companies.

We call that a pile-up - it's a recognized communication technique both on and off the ham bands. The receiving station quickly works each station in turn, whittling away at the pile.

I was on the receiving end of a worldwide, four-times per day pile-up for four years on the maritime bands. Fun stuff!

2 days seems a little fast, but my model from last summer was doing exactly what Scott described in about 6 days, and it was not a battery/cell problem. It was a common FT-50R problem which Yaesu fixed under warranty for me over the Christmas holidays.

>Scott Thayer wrote:

The really BAD coils in this HTX-100 are:

FT-2 (triple coil set in the upper right corner, going front to back)
L317 (VCO coil on the PLL/micro baby board)
L1,7,8,12,13 and L26 the rest don't look great but I hope they are
still intact and just need a new slug.

If anyone has a chassis that they want to part with I'm still looking.

ARRL ASKS FCC TO SUPPORT VOLUNTARY BAND PLANS

Following up on action taken at the January ARRL Board of Directors'
meeting, the League has formally asked the FCC to equate observance of
voluntary band plans with "good amateur practice." In a request for a
declaratory ruling filed April 3, the League asks the FCC to affirm that
```

amateur operation that conflicts with established voluntary band plans and causes interference or adversely affects those operating in accordance with applicable band plans would violate FCC rules.

Specifically, the League wants the Commission to confirm that hams should be familiar with--and should abide by--voluntary band plans applicable to the bands they operate and to state that those who don't operate in harmony with those plans are not operating "in accord with good amateur practice." The League's filing builds on a 1983 declaration by the Chief of the FCC's Private Radio Bureau that simplex operation on a recognized repeater frequency was contrary to good amateur practice.

The League argues that a declaratory ruling that provides clear support for accepted voluntary band plans would highlight the importance of band plans in the amateur community and set "a standard of cooperative behavior which is expected of licensees." It also would make it easier to resolve interference complaints without having to resort to FCC action, the petition said.

The League requests the Commission "at an early date" declare that good amateur practice "anticipates compliance with the accepted voluntary international, national, and regional band plans adopted by cooperation and coordination" within the Amateur Radio Service. A complete copy of the League's petition may be found on the ARRLWeb at http://www.arrl.org/announce/declreq.pdf.

LEAGUE INAUGURATES ARBITRATION SERVICE

The League has inaugurated an arbitration service for hams, ham organizations, citizens and other groups having disputes relating to Amateur Radio. The ARRL Arbitration Service offers a substitute for litigation by providing binding arbitration to settle disputes. Arbitration will be arranged through the office of Chris Imlay, W3KD, the League's General Counsel. Arbitrators will include ARRL volunteer counsel. Potential cases could involve neighborhood interference situations, disputes within local radio clubs, disagreements between a hamfest committee and an attendee or exhibitor, or even the use of a frequency (typically, but not necessarily, involving one or more repeaters).

Creation of the Arbitration Service is the first step toward a complete Alternative Dispute Resolution (ADR) system, as envisioned by the ARRL Board at its January 1997 meeting. The ADR system ultimately could include mediation and non-binding arbitration.

In arbitration, the evidence and arguments are received and adjudicated by a neutral arbitrator--either an attorney registered with the ARRL Arbitration Service or a Volunteer Counsel. (Panels of three arbitrators will be appointed in cases involving more than $10,000.) Arbitrators are sworn to remain impartial toward the parties--whether they are amateurs, amateur clubs, non-amateur neighbors, or neighborhood or municipal organizations. In disputes involving frequency coordination, the ARRL has reserved sole authority to designate the appropriate responsible coordinating

organization.

During the informal process, the parties represent themselves (although parties also may hire attorneys if they wish). Unlike litigation, however, the arbitrator's judgment is final and not subject to appeal. Each party will get a chance to present material and relevant evidence, and exhibits may be received in evidence, similar to a court trial. Witnesses shall be sworn and subject to questions and cross examination. The arbitrator will issue a written award within 20 days from the close of the hearing or final submission of documents. The parties may determine as part of their arbitration agreement how the costs of arbitration will be allocated, but all costs will be paid by the parties involved.

Cases may be instituted under the ARRL Arbitration Service by filing a signed Arbitration Agreement--together with the $50-per-party filing fee--with the ARRL General Counsel. For complete details on this service, contact ARRL General Counsel Christopher D. Imlay, Booth Freret, Imlay & Tepper, PC, 5101 Wisconsin Ave NW, Suite 307, Washington, DC 20016-4120; tel 202-686-9600; fax 202-686-7797.

MINNESOTA HAMS CONTINUE TORNADO RELIEF

In the wake of tornadoes that devastated two Minnesota communities late last month, Amateur Radio continues to be a vital part of disaster relief efforts there. Minnesota SM Randy "Max" Wendel, N0FKU, reports that Southwest Minnesota/Brown County ARES and hams from the New Ulm Radio Club are supporting the Salvation Army's disaster response efforts in Comfrey. The small farming community of about 500 people was virtually flattened when the tornadoes hit March 29. Wendel says communication sites have been set up in one of the three or four buildings still standing in Comfrey.

Brown County OES Dan Becker, N0VQA, reports the group has been using a beam and high power to hit a 2-meter repeater in LeSueur--nearly 60 miles away--to maintain contact between Comfrey and the Salvation Army's Minneapolis warehouse operation. Hams in the New Ulm area also are said to be using the New Ulm 2-meter repeater to help coordinate supplies, water and food. Disaster-related ham radio activity in the Comfrey area was expected to continue through the Easter holiday weekend.

In the larger community of St Peter--some 60 miles southwest of Minneapolis--hams have been shadowing Salvation Army officials as part of a huge mobile canteen operation there that's feeding thousands of tornado victims, volunteers, and disaster officials.

Former ARRL Dakota Division Vice Director Hans Brakob, K0HB, spent two days working with the Salvation Army in St Peter and another two days in Comfrey. "The hams have received universal praise for rising to the occasion and help has come from all over," he observed.

FCC TO ALLOW ELECTRONIC FILINGS IN RULEMAKING PROCEEDINGS

The FCC has amended its rules to allow the public to file comments and other pleadings electronically via the Internet in many rulemaking proceedings.

Starting later this spring, the FCC will permit electronic filing in most notice and comment rulemaking proceedings, most proceedings involving petitions for rulemaking, Notice of Inquiry proceedings, and petitions for reconsideration. The FCC initially had proposed electronic comment filing only for rulemaking proceedings, but--in response to public comments--expanded it to include the other filings.

The Commission says it's "committed to taking advantage of new information technologies to serve the public" and says its new Electronic Comment Filing System (ECFS) "will make it much easier for members of the public to participate in the Commission rulemaking process and will increase the efficiency of the Commission's operations." Electronic filing now is available only in proceedings specifically designated by the Commission. It will become generally available in early June.

The ECFS will allow members of the public to file, review and print documents on-line through the Internet, rather than having to rely on paper copies accessible through the FCC reference room or copy contractor. The ECFS will accept electronically filed comments in rulemaking proceedings, scan-in paper documents, and locate, retrieve, download and print any documents in the system.

For now, the Commission will not accept electronic comments in broadcast allotment proceedings because of its concern that electronic filings in those restricted proceedings might not be properly served on the parties, and to give the Commission more experience in electronic filing before including the large number of broadcast allotment proceedings.

The FCC acted on the matter April 2 (Report and Order FCC 98-56). Commissioner Gloria Tristani took issue with a provision to permit a midnight deadline for electronic comments while the deadline for paper filers continues to be 5:30 PM.

The complete announcement is at http://www.fcc.gov/Bureaus/OGC/News_Releases/1998/nrgc8002.html.--FCC

ANDY THOMAS SUGGESTS WE'RE NOT ALONE

US astronaut Andy Thomas, KD5CHF/VK5MIR, thinks we may not be alone. Speaking from the Russian Mir space station via Amateur Radio April 8 with high school students in Roswell, New Mexico--the self-proclaimed UFO capital of the world--Thomas said in response to a student's question that he believes there is extraterrestrial intelligent life. "Yes, I think there probably is, when you consider the scale of the universe," he said during a scheduled Mir-school contact with students at Goddard High School and Roswell High School.

Thomas described life is "a very tenacious thing," that could exist beyond the bounds of Earth. But he said he very much doubts that space beings ever visited Roswell, as some assert happened in the late 1940s. Tourist attractions in Roswell have since capitalized on the UFO talk.

The high schoolers asked 11 questions during the approximately 10-minute chat with Thomas, which took place via a telebridge with VK5AGR in Thomas' native Australia. Some 120 people, including fellow students, parents, teachers and the news media, were on hand for the occasion.

Mir-school contacts resumed earlier this year after a one-year hiatus. They are being arranged through the SAREX program, a joint effort of NASA, the ARRL, and AMSAT, in cooperation with the Russian space program. Other contacts are set for this month with schools in New Jersey, Connecticut, and Massachusetts.

1.2 GHZ THREAT

The ARRL has learned that the second civilian frequency for the global positioning system (GPS) could wind up within Amateur Radio's secondary allocation at 1.2 GHz. A decision on whether the new, second frequency will be 1205 or 1250 MHz is expected to be made in August. An allocation at 1250 MHz could mean the end of Amateur Radio in the band 1240 to 1260 MHz. The Amateur Radio 23-cm band runs from 1240 to 1300 MHz.

In February 1997, the Department of Transportation (DOT) and the Department of Defense (DOD) announced an agreement assuring civilian GPS users of a second frequency--referred to as L5 and considered essential for critical civilian GPS uses. According to a DOD news release, the White House Commission on Aviation Safety and Security, chaired by Vice President Al Gore, "called for the establishment of a second civil frequency as part of a broader program to maintain US leadership in aviation and satellite technology."

For more information, see http://www.defenselink.mil/news/Feb1997/b022797_bt095-97.html.

SUBMARINES TO TAKE TO THE AIRWAVES

Several submarines and other Naval vessels will take to the air the weekend of April 25 and 26 for Submarine Memorial Radio Reactivation Day, sponsored by the Submarine Veterans Amateur Radio Association. In the wake of a successful event last spring, the shipboard ham radio activity has become an annual event on the last weekend of April. The association hopes to reactivate the radio rooms of as many of the 23 memorial submarines as possible. This year's event has taken on an international scope with the participation of several Italian submarines plus the possible participation of hams from a memorial submarine in Vladivostok, Russia (possibly using RS56M).

Jim Flanders, W0OOG, in Plano, Texas, reports the USS Torsk in Baltimore and the USS Growler in New York City will join this year's roster. Flanders says other "definites" for the event are the USS Requin in Pittsburgh, the USS Drum in Mobile, Alabama, the USS Batfish in Muskogee, Oklahoma, the USS Pompanito in San Francisco, the USS Bluegill in Washington, the USS Croaker in Buffalo, New York, the USS Aluminaut in Norfolk, Virginia, and the USS Grayling memorial in Denver. He's hoping for confirmation from others.

"Last year was the first year we did this, and I manned the Batfish in Muskogee, Oklahoma, and my dad, K4RQQ (SK), manned the Drum in Mobile Bay," Flanders reports. (A memorial service for Murray Flanders, K4RQQ, was held aboard the vessel last November.) Other ships active last year included the USS Pompanito in San Francisco and the USS Requin in Pittsburgh. Norm Drechsel, WA3KEY--who plans to operate from aboard the USS Growler, is helping to coordinate the event. Last year, just four ships were active, but Flanders is hoping to get up to 20 on the air this year. A certificate is available. Flanders says hams can participate in two ways: Work as many of the subs as possible or help to operate from one of the memorial ships.

Operations will run from 1500 to 2200 UTC each day. Anticipated operating frequencies will be 3.943, 7.243, 14.243, 21.343, and 28.343 MHz, plus or minus 10 kHz. Flanders says some ships will not be on the air Sunday for a lack of operators. Also, he reports, some old timers "can't last two full days on a cold boat."

For more information, contact Jim Flanders, W0OOG, tel 972-517-8481; e-mail jaf@sprintmail.com; http://www.flash.net/~jflandrs.

FCC SEQUENTIAL CALL SIGN UPDATE

The following is a list of FCC sequentially assigned call signs issued as of April 1, 1998. For more information about the sequential call sign system, see Fact Sheet PR5000 #206S (dated August 1996). See http://www.fcc.gov/wtb/amateur/amatur.html.

STANLY E. HARTER, KH6GBX, SK

Stan Harter, KH6GBX, of Sacramento, California, died unexpectedly April 2, 1998. He was 68. He had served as assistant chief of telecommunications with

the California Office of Emergency Services. He served from 1965 until 1982 as chief of communications for the State of Hawaii, and later served as communications coordinator for Bakersfield, California, and as California RACES officer. He'd also worked as a professional broadcaster and broadcast engineer. Ron Kruml, KB7JCP, EComm News community disaster educator editor, said that Harter "truly wrote the book on emergency communication and public warning systems. "His wit and humor along with his endless enthusiasm made him a one-of-a-kind resource to those of us working to integrate volunteer communicators into governmental emergency management organizations," he said. Harter was an ARRL member and a life member of APCO. Survivors include his wife, a son, and a daughter. Arrangements are incomplete.

MILO P. HNILICKA, AJ1S, SK

Renowned inventor and researcher Milo P. Hnilicka, AJ1S, of Harvard, Massachusetts, died February 22, 1998, following a brief illness. He was 85. A native of Czechoslovakia, Hnilicka was credited with inventing freeze-dried coffee and space blankets. During his active career, Hnilicka was chief scientist at the National Research Corporation in Cambridge and held 28 US patents in the area of cryogenics and vacuums. Other achievements include the development of simulators used for training astronauts. He also holds two patents associated with motion picture sound recording. Hnilicka has been listed in Who's Who in American Men in Science. He retired in the mid-1970s. Survivors include his wife, Lili, KA1CDP, and two daughters.--Donald Strang, N1PPS

LARRY GASCH, W3SFY, SK

Noted amateur Lawrence L. "Larry" Gasch, W3SFY, of Gaithersburg, Maryland, died February 25, 1998, after suffering a stroke. He was 70. Gasch had been licensed for almost 50 years and remained active until his death. After a tour with the US Navy, he spent 25 years at the Naval Research Laboratory in Washington, DC, where he designed antennas. Gasch was a member of ARRL, a past president of the Old Buzzards Radio Club, and a member of the Board of Directors of the Montgomery Amateur Radio Club, where he taught Morse code classes. Gasch also was an ARRL Volunteer Examiner and was proud of the fact that eight members of his family also had become hams. Survivors include his fianc?e, Peggy Kelly, N3PPG, and his three children.--Peggy Kelly, N3PPG; Kay Craigie, WT3P

IN BRIEF:

* This weekend on the radio: The Japan International DX contest (high-band portion, CW) is this weekend. See January QST, page 105 for details, but note that this event runs from April 10, 2300 UTC, to April 12, 2300 UTC. Also, the MARAC SSB County Hunter's Contest and the ARP ARCI Spring QSO Party (CW) are this weekend. Monday, April 13, the ARRL VHF/UHF Spring Sprint, 144 MHz, runs from 7 until 11 PM local time. Just ahead: The DXYL-NAYL Contest (CW), the Holyland DX Contest and the Michigan QSO Party are on deck for the weekend of April 17-19. See April QST, page 102 for more

contest information.

* Comment deadlines set: May 7 is the deadline for comments on the FCC's proposal to facilitate the Universal Licensing System (ULS), Docket WT 98-20. Reply comments in that proceeding are due May 22. April 22 is the deadline for comments on the FCC's FY 1998 schedule of fees, MD Docket 98-36, which includes a reduction in the vanity call sign application fee from $50 to $12.90. Reply comments are due May 4.

* Palm to present: ARRL Field Services Manager Rick Palm, K1CE, is a presenter at the annual National Hurricane Conference this week in Virginia. He will discuss Amateur Radio's and Headquarters support roles in hurricane situations. Virginia and North Carolina ARRL officials also are expected to be on hand for the conference.

* Central States VHF Society confab set: The 32nd annual Central States VHF Society Conference will be held July 23-26 in Kansas City Missouri at the Adam's Mark Hotel. Those interested in making a presentation at the conference should contact Tom Bishop, K0TLM, 4936 N Kansas Ave, Kansas City, MO 64119; tel 816-452-6953; e-mail k0tlm@juno.com. Conference proceedings will be published by the ARRL and will be available at the conference. The deadline to submit papers is May 15, 1998. Among other events, the conference will include antenna gain measurement and noise figure measurement sessions on Friday, along with a flea market. For more information, see the CSVHFS home page, http://www.csvhfs.org.--Denise Hagedorn, AJ0E

* WTC beacon on 10 GHz: A 10-GHz beacon has been placed into operation from the top of the World Trade Center in New York City. The beacon, run by Larry Lipitz, NY2US, is at 10368.210 MHz and reportedly runs 80 mW to a six-slot antenna. The location is some 2200 feet above average terrain. Reports to NY2US.--Del Schier, KD1DU, via the VHF Reflector

* N9NB named IEEE fellow: Virginia Tech professor Ted Rappaport, N9NB, has been named a fellow of the IEEE. The Tech Communications Society sponsored his nomination "for research contributions and educational leadership in the field of wireless communications." Rappaport, 37, is a founder and director of the Mobile & Portable Radio Research Group at Virginia Tech.--MPRG Propagator

* New WIA president chosen: Peter Naish, VK2BPN, is the new president of the Wireless Institute of Australia. Naish defeated incumbent Neil Penfold, VK6NE, at a tumultuous annual meeting of the WIA March 28 and 29 in Melbourne. The meeting got off to a rocky start when a major portion of the business agenda was declared out of order. When the agenda finally was taken up, a proposal to introduce voting rights for divisions at federal meetings proportional to the number of members a division holds failed for the second time in two years. The agenda could not be completed within the two days set aside, and the meeting will be reconvened later.--Graham Kemp, QNews

==========
The ARRL Letter is published by the American Radio Relay League, 225 Main

St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Hi, All,

RI4CC is the special station, commemorating the 37th anniversary
of the first manned spaceflight made by Yuri Gagarin in 1961.
Operation is scheduled for April, 10-12, 1998 on HF & VHF
right from the portable location, on the field where Vostok-1 landed.

Hope to see you on the bands.

I have for sale a IC-706 and AT-180. Includes items below:

IC-706 MKI
FL-101 CW filter 250Hz
OPC-581 11.5' separation cable
MB-63 Mounting bracket for control panel
Icom service manual (this is from icom)
All boxes and manuals

AT-180 (auto tuner HF+6M)

This radio was only mobile once for a road trip. Was used as a base by a non-smoker. I would like $1150.00 for everything. I will pay shipping lower 48 states. For another $150.00 I will include a Timewave DSP 59+ (latest software). Unless it is sold first. I can be reached by E-mail or my phone number is 216-741-4717.

I will think about spliting up the 706 and the tuner.
Mike

Saturday there will be a hamfest at the Foothills College in Silicon Valley
(Just off of I280 in or near Los Altos). The usual stuff you
see at hamfests, some tubes and maybe a few old radios. And the usual
computer stuff. No, I am not associated with whoever runs it.
Starts at 6AM, $2 for parking.

<grin>
I've found myself in somewhat the same quandary, I'm currently using
AOL via TCP/IP for an occasional chat but find most of the chat rooms
to be occupied by kids. Yet IRC seems to be quite often populated by
those that get some kind of *authority* rush by kicking/banning
others for the most minute provocation.

You've missed some great excitement, Walt. In the past, 20m has seen
several distress situations involving privately-owned yachts.

Normally what would happen is that a ham would copy the distress thus
making him the controlling station. We (US Coast Guard) would usually be
quickly notified and would then bring up our (10kW) xmtr on freq'y taking
control. Weeks later we'd be flooded with QSL cards from around the
world! Nothing like real live drama on the ham bands.

I've got a great idea! Can't we get a bail-bondsman to
take Pork-Butt into custody? I know the $502 bond isn't
much, but maybe if we all got together and contributed
to this "cause", we could gather enough funds together to
sweeten the pot!

I'd be willing to contribute the first $100 just to see
Pork Butt sit on his fat ass in jail!

Maybe by the time we're done, we could have an extra $1000
incentive for a bail-bondsman!

Any other "pledges"???

Mike

Hi Walt,

I guess it depends on where you are listening. Granted I have been a ham a mere 17 years and have heard only two actual maritime or marine emergencies on 20 meters but I am sure there were many more. Remember when 14.313 was a useable frequency? On VHF, having lived on or near the coast, there were many more emergencies which included me getting actively involved with search efforts. Geography might be a big factor here.

>Kinda hard to do a DXpedition operation from inside a rental car!

Why would that be, Hans? Are cars too small, or are hams too big?
There's an answer to that dilemma, pitch a tent next to the car, or
rent a van. Realize that we're talking about using the car's electrical
system as an alternative to lugging along a mains power supply.

Anywhere you're likely to find AC mains power, you're likely to be
able to get a rental car. (And the rental car is useful for things
besides powering a ham rig.) In places where you can get neither,
the point becomes moot.

If you're on some barely above the tide line rock in the middle of nowhere,
you'll find no use for a mains operated power supply, because there are no
mains. Nor will you find a rental car. But you may have a boat that will do
instead. Most of them also have a 12 volt electrical system suitable for
powering an amateur rig.

If you prefer to lug along a generator, why lug along one that also
requires you to lug along AC power supplies? Miller has a nice
line of generators which put out 12 volts DC at up to 400 amps.
They're also MIG welders, handy for assembling an antenna array.

A friend of mine makes a neat little 12 VDC generator set from an auto alternator and a weedwacker engine. It puts out 60 amps, and is lighter and smaller than many AC mains DC power supplies. (Noisy as hell, though, recharge the battery and shut it off.)

Think outside the box. That's good practice for emergencies, when mains power will surely not be available, but in most cases a car or other vehicle with a suitable 12 VDC system will.

From Tad Cook, K7VVV
Seattle, WA April 11, 1998
To all radio amateurs

SB PROP ARL ARLP015
ARLP015 Propagation de K7VVV

Solar activity continues it's march upward this week. Average solar flux for the previous 90 days rose two points to 101, and flux values on every day this week were above this level, indicating a good upward trend. Average sunspot numbers were up over 11 points for this week from the week previous, and average solar flux was up over 15 points.

Wednesday's solar flux of 140.6 was the highest since January 2, 1994. The previous high level in this cycle was on March 15 of this year, at 133.

Solar flux for this weekend, Friday through Sunday, is forecast at 140, 140 and 138. Conditions should be good for the Japan International CW DX Contest. Next week look for flux values to drift back around 120 by April 22, 110 by April 27, and back to 130 by May 4. Look for unsettled conditions around April 17.

Now that solar activity is higher, 10 meters should be opening more often, particularly on north-south paths. 20, 17 and 15 meters have also been opening worldwide into the evening hours as daylight is expanded in the northern hemisphere.

Sunspot Numbers for April 2 through 8 were 67, 74, 70, 82, 82, 120 and 131 with a mean of 89.4. 10.7 cm flux was 103.4, 103.6, 110.2, 126.2, 133.4, 135.2 and 140.6, with a mean of 121.8, and estimated planetary A indices were 4, 6, 10, 4, 4, 8, and 8, with a mean of 6.3.

Looking for an inexpensive synthesized 2 meter rig rig. Does not need to have memories or high power. 10 or 25 watts is fine. The other one I was supposed to get fell through so I am still looking for something. Please email me with what you have.

Summary:

Sir, you received at least six excellent responses making you aware of Standard Amateur practice, the excellent selectivity of our receivers, and reaffirming that the bandwidth used in this activity is very small.

I was impressed by the patient, Elmer-type advice others gave you, despite your reputation as someone who likes to stir up controversy in the NG. Hopefully, you someday will tire of trolling. Maybe you even will "get the big picture" of Amateur radio, as opposed to the narrow, neophite view you presently display. When you do, you will find Amateurs generally to be a great group to chat with--folks who will help you anytime they can.

I hope you will choose to participate in the group, instead of being a "sniper" and taking shots at Amateurs from the bushes. Meanwhile, a salute to those who answered you. Good job, guys!

No, that's a relatively new thing which big business foisted off as a
necessity to our Congress. The idea of encrypting their cellular
transmissions seemed to befuddle them.

I don't imagine you do many CW pileups, but clearly the stations are *not*
all on the same frequency. Your best chance to be heard by the target station
is to NOT be excactly on the same frequency as the mass calling him.

Announcing:

."Hamfest INDIA '98".

To be held in Bangalore, South India.

Bangalore, high tech and ham capitol of India, is proud to host this
hamfest in the 75th Year of Amateur Radio in India.

1500 hams are expected to attend this three day event. All foreign hams
are welcome and encouraged to attend.

2nd Oct. 2pm Registration.
3rd Oct. 10am Doors open, technical meetings, exhibits, etc.
lunch and dinner included.
4th Oct. Planning meeting and closing of hamfest after lunch.

Activities during the hamfest will include exhibition stalls where
manufacturers in electronics and other related products will
display their wares.

The registration fee is Rs.200/- This is about $5 U.S./

If any one needs assistance booking hotels,
sightseeing trips, etc., we can help.

For more information visit our web site at:

http://www.angelfire.com/in/hamfestindia98/

or contact:

- VU2LU, Ramesh, vu2lu@hotmail.com (India)
- WA5VPW, Jim, jpfin@worldnet.att.net (United States)

73 and hope to see you in Bangalore in October!!

>Some have a rotary knob on the end and others have 6 to 7 switches.

You can't really use a 100 db attenuator with a HT, Greg. The HT's
shielding isn't adequate to give that sort of isolation. About 60 db
is all you can practically employ with a HT for DFing. Beyond that,
direct signal leakage through the HT case will dominate, and the
directional effect of your beam will be lost.

There is another way. QST printed the article and FAR circuits
has the circuit board for an electronic attenuator which works
a different way. The attenuator consists of a mixer and a level
controlled oscillator operating on a low frequency (in the range
of 100 kHz to 1 MHz). This mixes with the fox's signal and produces
an output shifted from the fox's frequency. The HT is tuned to that
frequency, so it won't hear the fox by direct through the case leakage.
The output of the LO is controlled, and that controls the output of the
mixer to give you any degree of attenuation you want. Slick.

Due to illness in my family and needing to move I'm trying to sell my entire shack. Some pieces have sold and this is basically what is remaining. If you are interested in some very, very good equipment; please believe me it is in excellent condition and well cared for; give this a look and/or tell your friends. No one will be cheated!!!

Any of you who loves the hobby would understand that this is a difficult time and experience to be faced with and I have no desire to hurt anyone by pushing off this equipment and have no hidden motives other than those expressed here!!!!!

Yaesu FT-ONE HF rig. (top of the line in it's time...$3000.+) Dual metering and dual digital displays along with 12 separate LED status indicators. 24 keys including a numerical keyboard, split frequency operation, scanning and 10 VFOs operable, multy tuning rates to 10 Hz, automatic mic gain control, noise blanker, RF speech processor compression level, SWR meter adjustments, FM squelch, key speed, vox gain and delay & PIN attenuator as well as the usual controls....100 watts capable. Has operation and tech. manuals!
COMES WITH a Drake WH7 wattmeter, Yaesu SP102P Phone patch/Speaker, MD-1 series desk top dynamic microphone, code key and all recently factory upgraded, serviced and tuned.....radio works on 220 or 110 v. also includes headset ear phones, filters.

Pakratt232, Model-232MBX t.n.c. with AEA software.

HF & VHF/UHF Dummy Loads.....misc. lengths of very good coax, side mount brackets for tower which allow you to add additional antenna.....

Diamond X200A 2m/70cm dual band high performance gain vertical base station antenna.

Lot of books (ARRL Antenna and Hand Books plus many more).....practice code on AEA codemaster, model mm-2.....or homemade key practice setup, extra speakers, and lots of misc.

Everything but the Drake meter has manuals/paperwork!!

Willing to make a package deal for someone interested in all of the items listed!!!!! $1350.00 gets it all!!! There is a treasure chest of misc. items alone!!!!

Thank you, please contact "rcbaum1@enter.net"

515. Best FILTER for digital radio??

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-11 00:00:00 UTC
From: electron78@aol.com
Message-ID: <1998041117370100.NAA08238@ladder01.news.aol.com>
Source record: 174127

I am working on a wideband digital receiver and transmitter, and I don't want to distort the digital signal unnecessarily and cause a high bit error rate. What type of I.F filters could someone recommend (Bessel may have a flat group delay, but its skirts are way too wide). How tight should the filtering be as a compromise between noise bandwidth and group delay variations? Could I use Butterworth filters with 20% wider bandwidth than the modulated signal? Are there any other filter considerations I need to know when using digital signals? Any help at all is most appreciated!

Mike

Jim thought out loud:
Duuu, I wonder if it works the SAME way on SSB? I'll have to try that some
time. (If they spread out over the full amount of the sub-band it would be
even more easy to deal with the resulting "pile up". ;-)

Supposition:

Consider the reative bandwidths of a typical CW filter and a typical SSB
filter. You will find that the SSB filter normally encompasses only ONE
SSB station whereas a CW filter will encompass SEVERAL CW signals.

Question:
Which mode will seem to cause MORE interference to the receiving station?
In a pile up?

Additional information:
On SSB you can learn a "skill" whereby you can copy the station out of a
pile by the differnent pitch of his/her voice by tuning OFF the
transmitting stations actuall frequency. I'm sure you do the same for CW,
(since you don't know exactly what frequency they are on anyway) so don't
be so quick to think that CW is the only mode that works!

Conclusion:
Come on Dick, don't always look for a chance to attack. Better to
contribute some real pearls of wisdom. i.e. get with the program. ;-)))

Jim Rosenthal, WA4STJ

519. ICOM IC-290 manual needed

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-11 00:00:00 UTC
From: sefchick@umdnj.edu
Message-ID: <6gokaq$j8a$1@nnrp1.dejanews.com>

FWIW ... I just returned from a week in Tokyo, Oskaka, Fukuoka,
and Tottori ... and I checked out the availability of the FT-847
there ...

First, NONE of the shops in Tokyo's Akihabara or the electronics
mart area in Osaka HAD the US model ... only two HAD the Japanese
model of the FT-847.

Even the Japanese version (with restrictions on bands that
would be undesirable to a US op) was reportedly "on allocation"
with each shop reportedly only getting ONE unit per month.

One shop said that they could ORDER the US model and deliver
it later (in Japan, you would have to ship/carry it home to US).

The price quoted for the ordered US version of the FT-847 was
Y170,000 (about $1340.00) ... even with 10% duty on the overage
of one's $400.00 exemption, this would be a good deal, but I
would not have ordered one, since they could not say for sure
*when* they could/would get it ...

Them's the facts ...

You have to boot from a floppy with the CDROM drivers
installed on it ... you DID create a boot disk with
CDROM drivers for emergency use, didn't you???

Larry,

Not that I agree with Masa's sentiments, but I'm sure that
he's made the classical error of using an "R" when an "L" was
called for ...

I just returned from a week in Japan and several of the
engineers at companies I visited with either spoke or
WROTE an "R" when it was obvious (to a Westerner) that
they really meant a word that used an "L". And I'm talking
about folks who are otherwise rather proficient with English.
(certainly FAR more proficient than I am with Japanese ...)
How much Japanese do you speak, Larry???

I was told that there IS no "L" sound in the Japanese
language and that's the cause of the confusion.

Anyway, it's pretty clear that Masa meant he would "clap" his
hands, not "crap" his hands :-)

(Frankly, I don't care which he does ... he's free to do
either as far as I'm concerned ... not my business.)

Walt ... at last one thing that you and I can agree on ...

> Traffic handling requires the ability to listen - not transmit - for
> long periods, to act without question upon the instructions of a
> duly-appointed net controller, and to pass often-complex messages
> accurately and effectively with a minimum of fuss.

And that requirement favors the use of modern digital transmission
methods ... not an outdated, error-prone manual method like Morse.

> It seems to me that all those qualities are anathema to today's
> typical contest operator.

Again we agree ... contest operators are self-trained in aggressive,
often boorish behavior that has not use and no place in emergency ops.
Contest operation "trains" for EXACTLY the wrong sort of operation
and behavior that emergency situations require ... and it wastes a
hell of a lot of otherwise useful spectrum, too.

Here in the US it was always legal to listen, but illegal to use the
information for personal gain, competitive advantage, etc.

The whole idea that one can make radio communications "private" by
passing a law is absurd. (But what can one expect from the govt.,
right?)

> A number of people have been
> prosecuted for listening to police transmissions; they were fined and
> had their scanning receivers confiscated. Apparently the storing of

Typical British combination of anal/stupid ... unless is is encrypted
using stong encryption, the term "private radio signal" is an ozymoron.

> The UK Customs are well known for seizing anything coming into the
> country which they think "might" be illegal. UK Customs can do pretty
> much as they please. Unlike the police, they do not even need a Court

Bullshit, Hans ... ALL of the above can be predicted by simply
listening to the station worked before you ...

> > what if one station is doing a "run" so the pileup station gets

Baloney ... too competitive, too anal about mode of operation,
and often too dependent on a fragile QRO station with big beams,
amp, etc. that may not be available in an emergency situation.

A year ago I puchased the AEA DSP 232.

What is the reason that we see no adds anymore from this unit, is Time
Wave not interested in this unit,
is it no good, or is the profit to low?

Is there anyone who can tell me about

regards Hans

That's a shame, Walt. When lives are at stake, such a ban could prove
fatal.

> (2) It is strictly prohibited for anyone to listen to stations in the

That's why we revolted against British rule and formed our own government.

Okay, I'll try it (if I can copy one from here in Hawaii).

I could think of no other way to prove your belief (contesters' skills prohibit them from being competent emergency operators) false than relating my Coast Guard experience. Why not attempt to defend your claim rather than resorting to personal attacks? Of course, since you admit to never having heard any distress situations on the ham bands, your claim had no basis in the first place.

Jeff KH2PZ (.dx dropped from fol-ups)

P.S. Since you're showing such an interest, here's another resume' item: Three state records in swimming (surely someone else has broke them by now, though).

Henry,

I agree to the oblisgation to be technical...BUT I dasagree
as to that requiring anyone to be knowledgeable on component
level design of a functional radio station from scratch.
The company I work for has world class designers and engineers
and they don't design on a component level. Design today
involves integration of chip sets, software and few component
level items like individual resistors and capacitors. So, if
that fits your definition, I can accept it. If not, then we
differ on the how, not the why.

Cheers

> -----END PGP SIGNATURE-----

Somebody named "Hash" is having a crisis.
Its all here:

1. "lower standards"

Nothing but CW will satisfy. There can be no substitutions.

2. "What does the internet have to do with anything?"

This guy should be jamming the "Liberty Net," not jamming rec.radio...

3. "THIS IS NOT CB!"

No, its the internet (see#2).

4. "these folks dont care to adopt amateur operating techniques and
improve themselves"

Perhaps because you shun them and they do not have a proper example.
What am I saying? You are a poor example - keep shunning them.

5. "Amateur Radio is supposed to be better, the best!"

Better than what? Please point out in Part 97 (or Part 95 for that
matter) where it says that Amateur Radio is supposed to be the best?

6. "go back to CB"

How 'bout I go back to the Novice subbands and continue to be ignored by superior minded individuals such as yourself?

7. "Giving away the store at the expense of existing users"

Thats what all the really old-timers thought when you got your license.

Time for you to go deal yourself another hand of solitaire.

Brian/N0iMD

Hello Gary,

"Spam" is the e-mail equivalent of junk mail.

I'm told the name originated in the U.K. Seems that during and after WW2, food was in short supply and rationed. One of the few items that seemed to be everywhere was the canned meat product with the brand name SPAM. Eventually the "seems to be everywhere" characteristic was applied to junk e-mail.

This is also the real joke behind the Monty Python sketch in which almost every item on a restaurant's menu has spam in it.

I have for sale a IC-706. Includes items below:

IC-706 MKI
FL-100 CW filter 500Hz
OPC-581 11.5' separation cable
MB-63 Mounting bracket for control panel
Icom service manual (this is from icom)
All boxes and manuals

This radio was only mobile once for a road trip. Was used as a base by a non-smoker. I would like $825.00 for everything. I will pay shipping lower 48 states. I can be reached by E-mail or my phone number is 216-741-4717.

Back in around 1977, while casually listening to HF we at a college club station heard and responded to a yacht in distress. One of a few operators who responded, someone else was in a better position to help, so we stayed on the sidelines. Club call was WA2SDY of Syracuse Univ.

It certainly is, Walt. US SWLs are not permitted to divulge content but are permitted to listen away--without license. If there is an emergency situation, the CG can transmit wherever the station in distress is transmitting and receiving.

I've personally been involved in several HF realtime emergencies through the years. Go figure...

> survive.

The point is that kids who in another day and age would have
become hams are not doing so today because ham radio is seen
as a bunch of cranky old men who insist on re-enacting the
past through stupid beeping noises and hazing rituals based
thereon.

> > B) They do not need to study for a license and do not need
> >to learn morse code.

> "lowering the bar."

Nothing about eliminating the Morse code hazing ritual is
"lowering the bar" ... it is simply bringing licensing
requirements up to a reasonable level of currency with
the real world of today. Morse is no longer a valid
licensing requirement because insuring that people know
Morse is no longer valuable (since ALL other services
have virtually completely abandoned the use of Morse, there
is NO need for a "pool of trained operators" using that mode.)

> > C) The numbers of hams in the USA is declining.
>
> The chaff is being weeded out. I can recall when there were only 300,000
> Amateurs (and only about 3,000 Extras). The hobby survived.

Conditions have changed. When there were only 300k hams, the
world was a VERY different place. There were NO cellphones,
NO wireless LANs, NO CDPD, NO PCS, no "little LEO" satellites,
etc. ... there was FAR less demand for spectrum because there
were far fewer services.

We cannot continue to command huge amounts of spectrum
without substantial growth in our numbers. In fact, our
very survival is in question if we don't grow substantially.

> > D) Commercial interests want and need more spectrum.
>
> Granted, this is a serious threat. However, there are two things going for
our

> folks don't want to become ham operators, the perception is that we are a
good
> group to have around.

Joe Public thinks of ham radio as "CB" ... they simply don't know
the difference in large numbers (except they know that you have to
learn that stupid Morse code to get a ham license, but not to use
CB ... that makes CB "better" to many who haven't been exposed to
ham radio in a way that lets them know better.)

> (2) We have a national organization which carefully monitors everything being
> proposed on Capitol Hill. This "early warning system" is invaluable in
helping
> us head off trouble.

Right ... like they prevented the loss of 220-222 ... the ARRL's
"code forever!" policy and opposition to the FCC's proposal to
create a meaningful no-code tech license were DIRECTLY responsible
for the loss of that 2 MHz of spectrum.

> > E) Congress needs/wants money (from auctions of radio

>
> 73,
> Paul K5PF

Listen to the HF bands with an honest ear and it's QUITE
apparent that Morse code does NOT guarantee quality. Most
of the biggest assholes you will find are LONG-TIME, CODED
hams.

Code has NOTHING to do with the "quality" of the ham. I'd FAR
rather see 3 or 4 technically competent, polite folks who have
never even heard Morse become hams than some redneck asshole who
doesn't know a damned thing about radio but can beep real fast.

You don't get it do you? Amateur radio is supposed to
be a place for/where people become technically proficient,
experiment, develop new methods of communicating via radio,
and provide public service. It was never intended to be
an elecronic paintball wars gameland for idiots with more
testosterone than brains.

> If your not willing to upgrade your thinking as well as your privileges, then
go
> back to CB and leave Amateur Radio alone.

The point is that there is an excess emphasis on Morse as
the measure of "worth" and "upgrading."

> Giving away the store at the expense of existing users is not the answer.

Nobody is "giving away the store" ... far more emphasis needs
to be placed on the things that are *supposed* to be important,
like technicall competence. Besides "the store" belongs to ALL
US citizens, not just to a few idiots who insist on a continual
re-creation of the methods of the 1840s.

Just a note to let you know the 1000MP mail list is operational
again.

While the archives were saved the actual list of subscribers was lost.

That means if you were on the list you will have to re-subscribe.

Please visit:

http://jehosophat.com/1000mp/

for instructions on getting back on the list.

>Wave not interested in this unit, is it no good, or is the profit to low?
>Is there anyone who can tell me about
>

I just made enquiries with Timewave on the progress of upgrades for
the DSP-232.

The service manager replied that there are too many hardware and
software problems with the DSP-232 and that it was not a viable
product.

Timewave is to offer a trade-in discount on a DSP-2232zx.
As an alternative Timewave is to announce a repair policy that will
bring the DSP-232 back to version 1 standards.

That is a change from my contact with the technical manager 6 months
ago who said that there was not much wrong with the hardware and that
Timewave was going to re-write the software.

555. ACS Newsletter for 11 April 1998

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-12 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6gp22f$3pt@news.Hawaii.Edu>
Source record: 174058
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <614>

.....
>From the Editor's Desk: As you know, Stan Harter, Assistant Chief of the Telecommunications Unit, Information Technology Branch, Governor's Office of Emergency Services, passed away April 2, 1998 from a massive heart attack. He was 68 years old.
Stan was the program manager for California's ACS program. He created the ACS program from the statewide RACES program some years back, realizing that the role of emergency communicator required the services beyond those of amateur radio. Since its inception, the ACS program had combined the efforts and talents
of thousands of people from hundreds of organizations worldwide, all working together for a common purpose. The success generated by Stan's insight can never
be fully measured. He leaves behind wife Alicia, daughter Annette and son Mitchell.

Services for Stan will take place Thursday, April 16, 1998 at 1400 hours at Christ Unity Church 9249 Folsom Blvd at La Riveira in Sacramento, CA. A map with
directions can be found at Stan's Memorial Page at
http://www.garlic.com/oes/harter.htm

The Harter family requests that in lieu of flowers, Memorial and Remembrance donations be sent, in his name, to: YOSEMITE FUND, Box 637, Yosemite, CA, 95389.

Please stop by and sign Stan's Condolence Page, especially if you cannot make the memorial service. The comments from Stan's friends are being

printed and will be
presented to Alicia at his memorial service.

As a tribute to Stan, I'm sending you his last by-line. He wrote this the day before he passed away, and it's fitting that we make certain it get's published to his friends and well-wishers.

The regular ACS Newsletter will return next week.

Aloha, Stan. Mahalo.

RUBBER DUCKS CAN BECOME RUBBER FLOPS
by Stan Harter, KH6GBX

The ubiquitous rubber duck antenna atop virtually every hand-held radio is compact, small, convenient --- and terribly inefficient. It is a trade-off between daily convenience and effectiveness. It behooves all policemen, fire fighters, surveyors, hams --- any user of the popular hand-held two-way radio. Uhh, I mean wireless. But you knew that. What you may not know is that, brand new out of the box, fully charged battery, a 5-watt
transmitter only radiates 0.05 watt from your belt holster and 1.6 watt at face level!

I'll describe the problems, first for laymen and supervisors and second for the more technically tuned.

First, the rubber ducky is short and flexible. Inside the new (shiny and clean) or old (grungy, nicked and dirty) rubber housing is a coiled spring or helix. This makes the antenna very flexible and short. When ever an antenna is made shorter than its true electrical wavelength in free space, it is a compromise antenna. Whenever a comprise is achieved, it is done so at the expense of efficiency. Loss of efficiency means lowered power output (range) and reduced received effectiveness (range again). You've all seen those attractive (to a trucker) white fiberglass CB antennas fastened on to their rear view mirrors. Well, a full quarter-wave antenna at the CB frequencies is about 9 feet tall. It's the best --- but the least practical.

"Wha'hoppen to da 5 watts I paid for?" you say. The rubber duck is a very lossy radiator. You may accept its convenience --- and limitations --- when you know how poorly it really performs. Cut to the chase: is there a wonder cure you are about to offer? No. Convenience still overrides efficiency. You can replace the rubber duck with a telescopic half-wave or 5/8-wave telescopic whip and get closer to the 5 watts ERP (Effective Radiated Power) you paid for. Unfortunately, such antennas have a life expectancy of 10 to 30 days defending upon the child factor, impatience, speed, mood, nearby objects intruding on your space, and a host of other reasons. I carry one in my response kit, however, because I will get out then the ducky doesn't. I value my safety and health and those in my charge. Out of radio range? Don't proceed. Solve the problem. That's what Comm Unit Leaders do on forest fires.

Unfortunately, few understand what a host of sins that nice black rubber (neoprene or whatever) hides! I was unaware until I saw the light at the National Interagency Coordination Center in Boise, ID, to have my Communications Unit Leader red card renewed. (More on that in future articles.) They have developed a method of testing Handie-Talkies with the rubber ducky on. True, there are tests using metering jacks and dummy loads, but they don't test the antenna over the air. (Again, more on this in the future.)

Suffice to say, the typical rubber duck becomes defective in 6 months. Most don't last over a year. A few are destroyed on the first incident, campaign, or project fire. When I say "typical" I include all law enforcement, fire suppression, and hams on the street or in the field. The antennas look fine from the outside. Their failures are hidden from you. The most common breakdowns are invisible and can be corrected only by replacing the antenna, and replacing it on a regular basis.

For the more technically inclined, a new rubber ducky, a 5-watt 150 MHz hand held portable (HT) at belt level (walking around or on solo bike officers) has 0.05 watt ERP. Held up at face level, the radio now has 1.6 watt ERP. That's quite a difference = 15 dB.

The following findings appeared in the NIJ TAP 203-83, page 9 by LESL, NBS in 1983:

Antenna loss (dBd)
Antenna type VHF dBr* UHF dBr*

One-quarter wavelength tele- 5 0 20 0
scoping (extended and held
at face level)

One-quarter wavelength tele- 45 40 50 30
scoping (collapsed and worn
at belt level)

Rubber duck at face level 10 5 25 5

Rubber duck at belt level 25 20 50 30

* "dBr" means a reference antenna; i.e., the 1/4-wave telescopic extended and held at face level.

Moral: Buy two new rubber ducky antennas. Install one, toss the old one away, and get ready to use the spare a lot sooner that you have in the past. There is nothing more annoying than hearing a scuzzy signal coming through the repeater when it's quite possible that the owner-operator or the radio shop can and should correct those nasty little hidden problems.

10-7
.....

This week's EMCOMM Bulletin:

EMC127 TSUNAMI! How to Survive 3/3 For release 4/14/98

What can I do ahead of time?
1. Make disaster plans now. Talk to the people you live with about what may happen during a strong earthquake. If you live or work in a low-lying coastal area, know where to go to survive a tsunami. Hold earthquake/tsunami drills at home or at work.
2. Assemble a portable disaster supply kit. Have a kit available in your car, at home and at work. The kit should include a portable radio with fresh batteries, water, first aid supplies, flashlight and extra clothes or a blanket. Put your kit in a backpack and leave it in a convenient place.
3. Contact local emergency officials. Find out what areas are most vulnerable to tsunami hazards, which areas are safe, and which routes are best for evacuation.
4. Take a first aid class. Learn survival skills, talk with your family, friends and neighbors. Knowledge is your greatest defense against any potential disaster.
5. Join a neighborhood emergency response team. Contact your local Office of Emergency Services to learn whether there is such a program in your city or county. Or start one in your own neighborhood.

Remember:
a..never go to the coast to watch for a tsunami if you hear a warning has been issued. Tsunamis move faster than a person can run. Any incoming traffic in the coastal area hampers safe and timely evacuation.
b..Tsunamis are not surfable! They are not V-shaped or curling waves. Large tsunamis most frequently come ashore as a rapidly rising turbulent surge of water choked with debris.
c..All tsunamis are potentially dangerous, though they not damage every coastline they strike.
d..Pacific coastlines are vulnerable. Understand the hazard and learn how to protect yourself.

SUMMARY:
If you feel a strong earthquake when on the coast:
1. Drop and cover. If possible, get under a sturdy object and hold on. Watch for falling objects.
2. As soon as possible after the shaking is over, move to higher ground or inland. A tsunami may be coming. Go on foot immediately. DO NOT WAIT FOR AN OFFICIAL WARNING.
3. Stay away from the coast. Waves may continue to arrive for hours.
4. Listen to your radio for an official "all clear" before returning to the coastal area.

(end of series from a publication of the California
OES Earthquake Program from the Earthquake Education
Center, Humboldt State University.)

A true tsunami event that happened in Hawaii is in
the next two bulletins. They are dedicated to the
memory of Stanly Harter, KH6GBX. It was his own
experience.

Com'on people.. we all KNOW who the best emergency ops are! It's that bunch that runs 2KW to ragchew 50 miles away EVERY day at the SAME time on the SAME frequency, regardless of who was there before (be it previously started ragchew, DXpedition, Contest Operation or Distress Call).I think it's obvious what VAST skill set that sort of operation requires. (Hey, they must be smart. They paid umpteen thousand dollars for gear so they could save 10 to 15 cent/minute long distance charges!!)

Max,

I wish to echo your thanks to the New Ulm club.
In addition to making their repeater available full
time for almost two weeks, they also contributed
additional equipment to the Comfrey operations base,
and a technical liaison person to maintain the
outbound link to "the world". New Ulm amateurs truly
stepped up to the challenge and delivered an invaluable
service to their isolated neighbors to the west.

Another individual, unsung in all the reports I have
seen, is Ray Clare, KB0QDF. Ray was on the Comfrey
scene within hours of the disaster and stayed on scene
to the very end of the operation, building and managing
a well functioning local tactical network to serve the
Incident Scene Commander, and a long range link
to coordinate "off scene" communications needs. His
ability to marshall scarce resources and serve the
needs of the client can only be described as masterful.

His determination to "stick it out" to the end of the
operation, at significant personal inconvenience, was
in the best tradition of the Amateur Radio service. Ray,
a "codeless tech", deserves public recognition at the
Section and Division level for his selfless contributions
to the citizens of Comfrey.

73, de Hans, K0HB

Now Jim:
Your talking to EL supremo Extra, the only one in Amateur Radio that got his license legally. Show a little respect, after Dick all other license classes are just people who passed a much easier test,bought their licenses or were grandfathered into the Ranks. He drove 250 miles in a raging snowstorm, had to sit in a room with social inferior and much less intelligent people and take a test in front of a 8ft 6in FCC official with hairy eyebrows and filed off razor sharp teeth. Man!!! I sure am glad I took my test in kinder Gentler times, sort of makes you wonder how any of these guys survived long enough to become a ham if the test were that rough.

Brian:
I recently noticed that one of the procoders made a comment about the CBers having a free HF band to shoot skip. Maybe some of them don't resent the people on the band but the fact there is a non morse controled set of frequencies being used to have fun.

After all no one is supposed to have fun in Amatuer radio, just contest,add wallpaper and QSO using CW. All these arguments about this or that hides the fact it is a hobby intended to give the most people possible a lot of fun and satisfaction.

de K5PF:
Your paragraph is contradictory. I won't respond to something so senseless.

Stevenson:
>
>Right ... like they prevented the loss of 220-222 ... the ARRL's
>"code forever!" policy and opposition to the FCC's proposal to
>create a meaningful no-code tech license were DIRECTLY responsible
>for the loss of that 2 MHz of spectrum.

K5PF:
Sorry. You've done it again. No matter what is being discussed, you convert it
to a platform for your No Code agenda. I choose not to play your little game.

Quoting original post:
>> I am all for an increase, as long as our goal is QUALITY, not simply
>QUANTITY.

Stevenson:
>Listen to the HF bands with an honest ear and it's QUITE
>apparent that Morse code does NOT guarantee quality. Most
>of the biggest assholes you will find are LONG-TIME, CODED
>hams.
>
>Code has NOTHING to do with the "quality" of the ham.

K5PF:
I rest my case. You are so consumed by your No Code agenda that it's all you
can talk about, Carl. There was nothing in my original post about Morse
Code--pro or con. I'm sure you are sincere in your beliefs, and that you care
about our hobby. But slow down and take a breath, now and then!

greeting sean

this is not a recommendation but more of a place to start.
My last tnc, I still have it, is the kam allmode.

In terms of the radio, I would suggest that you use a mobile radio
with a decent antenna. I know this sounds counter to the going
belief but I is better be put out a decent, power wise signal, and be
heard by the other packet stations then to be weak and only heard by
the node or bbs.

If anyone has a Heath AA-18, please check to see where the wire from
Point C on the circuit board is supposed to go. Mine has that wire
sort of floating in space.

Thanks in advance,
Jeff KH2PZ

Not if you have any desire to win, it can't. You'd have so many fewer QSOs than other competitors that it wouldn't even be close.

Carl, the best thing about you is that, when you don't know what you are talking about, you don't just stop with simple statements. You need to really demonstrate your lack of knowledge.

How would "too competitive" be a reason that contest ops wouldn't be good emergency ops? Why would they be competitive in an emergency situation?
Don't you think they'd be able to tell the difference between it and a contest?

On what do you base your "anal about mode" no-brainer? There are contests for all modes.

Where did you get the idea that all contesters use high power and large antennas?

You're going to need a bootable floppy, if you don't have one or if it
doesn't have these files on it go to a friend/work/understanding
'puter store owner etc. that's using Win95, stick your floppy in and
go to DOS and type "SYS A: " or "SYS B: " depending on which drive
you're using , (that'll make the floppy bootable) go to
C:\windows\command and copy mscdex.exe, edit.com , format .com over
to your bootable floppy. At home boot up with your floppy in the A
drive type "SYS C:" , then copy mscdex.com and edit.com over to the
C: drive. Switch to the C: drive and type "edit.com" hit enter and
then under "FILE/NEW" type "REM" go to file\save as and save this file
(on C: drive) as autoexec.bat, go to file\new again and enter
"FILES=40" Go to File/save as and save this file (on C drive) as
config.sys .... (The REM in autoexec.bat does nothing and the
"Files=40" is a generic statement. The CD rom install disk usually
can't modify a zero byte file so these generic/do-nothing statements
are needed) .... Remove the floppy from the A drive and reboot the
'puter , the C: drive now has the sysem files so it can boot and you
have an autoexec.bat and config.sys so the CD rom install disk can
modify those files (adds your driver statement), Run your CD rom
install disk and it'll probably ask where the mscdex.exe file is and
you can type C: after the CD rom is added you can switch to D: drive
(may need to reboot first) look for Setup.exe on the Win95 disk and
Bob's your uncle .... You *should* copy the generic autoexec.bat and
config.sys to your bootable floppy so you don't have to repeat this
process if you format again ..... whew ... :)

Euro-spook radio. Not for sale, legaly, in the USA. It is a keppad
programable radio like the JT-1000, but again not type accepted in the
USA. VHF is 136-172 MHz, UHF is 438-470. Uses GP-300 Mic. They are longer,
and narrower than a GP-300. Thats what I know. BiLL

Hey Mezgie

That was quite a bar room brawl on 3950 tonight, no??? The Field Mice got their tails caught in the mouse trap.

Now it's 4.30 AM and guess who shows up on 3950????

None other than W5VVI, playing suck-butt with Side Car Sidney and Knothead Don Smith. Lying as he usually does, he's claiming he missed everything on the radio tonight. Says he just got up, and doesn't tape anything on 3950 anymore.

Hey, if you believe that, there's a replica of the Brooklyn Bridge right out here in Southwest Missouri you can buy real cheap.

Norm just finished blaming me for the current state of affairs on 3950, that I started it all. Everything was fine and dandy on 3950 until I showed up and caused all the trouble. Never mind I've bee off the air for nearly 2 years, I'M STILL RESPONSIBLE.

What a bunch of crap. Well, if hams are bored with what they're doing on their usual frequency, they can alwasy tune 3950kc's, 10PM Eastern time every Saturday night for hysterical entertainment, nonstop jamming, nonstop finger-pointing, and limitless foolishness from the Blowhard of New Mexico, K5BLB.

I didn't get around to my post for Kevin Alfred. No big deal. He's ok, but he's just got too fat a head is all. A little dash of humility would go a long way. If he helps tie Sidney's tail in a knot, then that's good. Do you remember when Vic and the Girls used to play footsie with Dave and Norm?? They thought they could appease the Devil but, as MUR said, ""IT JUST DOESN'T WORK THAT WAY"".(got that on tape, by the way). Gee, who used to say that all the time """I GOT IT ON TAPE"". Right you are, none other than W5VVI (vivacious vindictive idiot), colleague of WA9KJI, King of the Jammers. Yessiree, W5VVI, now on 3950 as I write this, bitching about jammers, whereas for ten years, he has defended the worst jammer throughout the entire history of ham radio, WA9KJI. Sort of sounds like the pot calling the kettle black, no??? Yessiree, WA9KJI, who has jammed 3950, 7250 and who knows what other frequencies with his tape collection, probably a lot of it made by none other than W5VVI. And they want to bitch about jammers, that everyone that disagrees with them are Nazis. N5OUG says tonight that you're all Nazis. You're not supposed to criticize the government for running us into a 4 trillion dollar debt, causing numerous wars, etc. I guess the public should just be happy for all this crap and

enjoy it. If you complain about anything, YOU'RE A NAZI.

If you recall, I tried to explain a few things to you back in 95 or 94 about W5VVI. If you think this guy is benign, think again. What's going on right now proves otherwise.

ah yes, isn't the world interesting?

Catch ya later mezgie dog.

>"code forever!" policy and opposition to the FCC's proposal to
>create a meaningful no-code tech license were DIRECTLY responsible
>for the loss of that 2 MHz of spectrum.
>
>

According to a legend, a king once placed a hevy stone in the roadway. Then he hid and waited to see who would remove it. Many who came by loudly blamed the government for not keeping the highways clear, but none assumed the duty of pushing the obstacle out of the way.

At last a poor peasant stopped and rolled it into the gutter. To his surprise, he found a bag full of gold embedded in the road beneath the spot where the rock had been. It was the king's reward for anyone who removed the troublesome object.

So, Carl Stevenson, who are you in this story? I submit that you are one of those who "loudly blames the government" for everything, who fusses about the ARRL, and whines about the requirement to study for a license and to learn Code. For instance, what did YOU do to prevent the loss of some of 220? What are YOU doing about intruders in the bands? How are YOU helping in the fight against the lids on some frequencies? Whom have you written about the issue of auctioning off spectrum space and its impact on Amateur Radio?

In between your trips to Japan, why don't you get off the No Code stump for a while and look around to see what else you might be able to do to help our hobby grow? You might be surprised to find that there are other areas that need attention--even more urgently than the Code issue.

You and your No Code buddies are ignoring overwhelming evidence (much of it shared in this NG) that CW is alive and well as a mode of communication--not just on HF, but on VHF and UHF as well. Meanwhile, if someone as much as says "good morning", it somehow gets twisted by you into a No Code debate. Surely someone who roams over a wide portion of the planet can think of something else to discuss now and then! Give it a try!

It may be unheard of; but given an emergency situation, I would hope the Radio Officer has some authority and latitude to work the vessel in distress directly and to avoid needless and confusing relays if at all possible.
>

> station.

I suspect you will find that stations have loosened up a bit in this area. The various monitoring magazines regularily print information regarding current QSL policies and photos of QSL cards from several of the larger U.K. Coastal Stations. Some are cards that the listener made for Radio Officer signature, and others are professionally printed cards from the station itself. Likewise, there are also cards starting to show up from some of the larger and more common U.K. military stations (RAF and RN).

There is NOTHING wrong with CW as a Mode. But please tell me why that
is the ONLY mode to have its own special EXAM ??? There is NO treaty
requirement to have a special separate exam for CW. Just "to
demonstrate a knowledge of morse code" I believe it says.

If you can get one in Japan, pay the lousy duty (roughly $90.00 max)
and be legal. It's not worth the hassle, worry, or risk.

This is definitely one case where it doesn't pay to be they
typical skinflint ham.

Hi there,

I got a RACAL RA6790 receiver from TUCKER about two years ago. It was working very fine and sure brought me a lot of fun in the beginning. But after a few months of not turning the power on, one day (while still in warranty) when I plugged the power source into it and tried to turn it on, I found it was completely dead! The LCD display showed the digits in chaos. Nothing could be heard, nor did the control pad on the front panel.

I opened the cover and found the possible cause. The battery on a PC board (maybe the CPU board, it was located on the right side and inserted vertically) was leaking. After I cleaned up the mess on the PC board and replaced a new battery with the leakage one, it just won't back to life. I am sure the voltage (I replaced with two 1.2V NiCd) and the polarity are correct.

I know I should hand it over to TUCKER for remedy. But as you can tell, I am in Taiwan, to buy a non-amateur-radio equipment is difficult, yet it is more difficult to have it repaired.

Is there any one can drop me a hint to fix this problem? Or just lay it down on floor as a footstool?

Is the CPU board completely dead? Should I turn in the board only, or the whole rig to the State for repair? And where?

73s,
Bear/BV2WC

Becasue that's their M.O. ... they spend their lives in a
constant battle to stomp the other guy into the dust with
their QRO signal and be the first to work the DX station.

When time comes for an emergency op, their adrenalin gets
running and they just can't help themselves ... they double
and but in and show none of the discipline that the situation
requires.

I've seen it happen over and over again.

> while and look around to see what else you might be able to do to help our
> hobby grow? You might be surprised to find that there are other areas that
> need attention--even more urgently than the Code issue.

I disagree ... I believe, like many, that the "code issue,"
as you put it, is THE single most important thing standing
in the way of ham radio's growth and survival.

To expand just a bit (not that YOU'LL understand) ... it's
not just the code test itself, though that's a biggie ... it's
the ENTIRE ATTITUDE of backwardness, crankiness, and "Newcomers
Not Welcome Here" that ham radio exudes. It's people like
you with your narrow, bigoted attitudes and insistence on
stagnation and backwardness.

> You and your No Code buddies are ignoring overwhelming evidence (much of it
> shared in this NG) that CW is alive and well as a mode of communication--not
> just on HF, but on VHF and UHF as well.

CW *IS* alive and well as a mode of communication ... by a small
minority of hams who enjoy it. That is NOT justification to cram
it down the throats of everyone else and use it as a club to keep
newcomers away.

Nobody is trying to take CW away from anyone who WANTS to use it.
All we are trying to do is to stop tyrants like you from forcing
EVERYONE to jump through your stupid hoops.

>The output of the LO is controlled, and that controls the output of the
>mixer to give you any degree of attenuation you want. Slick.

This was one of the first pieces of Real T-Hunting Equipment I built.
Based on, I believe, an article in the 1992 November issue of QST.

Worked great. One problem though: in heavy RF zones, like in a
city, the it tends to make a typical HT's overload problem much
worse. Either the unbalanced mixer [single diode], or the poor quality
of the LO [basically unfiltered oscillator hooked to said diode, resulting
in images galore], or a combination of both conspired to make things
really unpleasant. At times, it converts the normally bullet proof
HTX202 into something worse than a TH-78A.

Still, you can DF right up to the transmitter [eg, metres away from a 50W
transmitter] with such a thing. And the single knob to control mixing
level is a big user-interface advantage over bank-of-switch attenuators.

Walter,

In my previous reply to your questions about the HL-2200, I told you it used 3-500Z tubes.

I didn't have access to a reference I needed to put you onto a manual at that time. Now I have.

In the back of many/most 73 magazines, there is an ad by the Heath Company advertising the sale of photocopies of most Heathkit manuals. Call them at: 616-925-5899, 8am-4pm Eastern time.

For a terrific "reference" manual to just about all of the ham gear Heathkit sold, pick up a copy of the book "Heathkit, A Guide to the Amateur Radio Products" by Chuck Penson, WA7ZZE. Published by Electric Radio Press, Inc., Durango, CO. This is the source I used to inform you of the tube type used in the HL-2200. It doesn't go as deeply into each product as an owner's manual will but it does tell you a good deal about each product, including the dates it was offered for sale, it's selling price, and some of it's operating features, quirks, and kinks.

584. Re: Can anybody recommend a TNC or Web page

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-12 00:00:00 UTC
From: "Mark L. Bary" <mbary@erols.com>
Message-ID: <35312019.B5F004F4@erols.com>
Source record: 174087

Rollins,

I have always been fond of the Kantronics products, especially the KPC-3, now
the KPC-3 Plus.
This is a great TNC for use on 1200 bps VHF or UHF packet. And I used their
Hostmaster software for several years quite happily!

I have had some experience helping some other folks get their stations going and
they used the AEA PK-232MBX. I never have liked that multi-mode unit because it
seemed to be much more difficult to set up.

If you are looking for a good multi-mode (i.e. HF as well as VHF/UHF unit), then
I would recommend the KAM Plus.

Here are some places to visit on the Web for more product information, and
Packet information:

http://www.kantronics.com The Kantronics Company homepage
http://www.tapr.org The Tucson Amateur Packet Radio
home page.
http://www.paccomm.com The homepage of PacComm another Packet
Radio
equipment
manufacturer
http://www.mfjenterprises.com Another TNC manufacturer
http://www.sni.net/kawin A great 3rd party Kantronics type
TNC software source
http://prairie.lakes.com/~medcalf/ztx/wire/index.html#k TNC Wiring
diagrams
http://www.sedan.org A great place for general packet
info, diagrams, and links

Hope that gets you well started!

Nope. Frankly, I go where I want, when I want, Carl. By the way, I once scored big by being in Japan when the Yen was 360 to the US dollar! I bought out the stores! (Fortunately, I had been out of the US so long that everything was duty-free).

>
>I disagree ... I believe, like many, that the "code issue,"
>as you put it, is THE single most important thing standing
>in the way of ham radio's growth and survival.
>
>

Well, we can agree to disagree. There are a number of critical issues facing Amateur radio today. The code issue, of course, is one of them. Unfortunately, the No Code gang is throwing up so much smoke that it is distracting people from other, more subtle threats.

>To expand just a bit (not that YOU'LL understand) ...

Try me, Carl. I think my experience, education and IQ can handle it......

> it's not just the code test itself, though that's a biggie ... it's
>the ENTIRE ATTITUDE of backwardness, crankiness, and "Newcomers
>Not Welcome Here" that ham radio exudes. It's people like
>you with your narrow, bigoted attitudes and insistence on
>stagnation and backwardness.

Newcomers are very welcome, as far as I am concerned, Carl. Read previous posts. I am consistently in favor of embracing new hams and seeing them progress in the hobby. This, and the "narrow, bigoted attitudes and insistence on stagnation and backwardness" is just mud slinging on your part. I think it means that since I disagree with you, I am backward, bigoted, etc. Unfortunately, this attitude is prevalent among folks who feel they (alone) are the "enlightened" ones..

SUMMARY:
I stand by my original post, Carl. You have one single agenda, No Code, and you think it is the answer to every problem in the world of ham radio. Again, I challenge you to expand your vision.

73,
Yrac
"When your only tool is a hammer, every problem looks like a nail."

DX is and it is much more than just QRO. The statement above indicates
Carl has worked little or no DX on HF. I doubt that Carl could listen
to a pile-up and determine where the DX will likely be listening on
his next QRZ. A kilowatt does no good if it transmitting on the wrong
frequency. Many new DXer's prove that daily.

Lecturer, not Professor.

>(reserve "weekend wonder" status doesn't count for crap)

Sir Winston Churchill said "The Reservist is Twice the Citizen."

The Commander-in-Chief Pacific Forces, speaking to President Bush,
remarked "...an enemy's bullet ripping through the flesh of a
soldier, sailor, or airman cares not whether that man is a reservist,
guardsman, or regular - they all bleed the same, and die the same
painful death for their country..."

If the current down-sizing of the military continues, the reserve
force *will* be the military.

>Stop trying to "impress" everyone, we all know you're an insecure,
>anal jerk.

Happy Easter to you and your wife, Carl. It would appear your stay in
Japan didn't go so well, judging from your mean-spirited comments.
I would have hoped the kind-heartedness of your Japanese hosts would
have eased the hostility you carry to these newsgroups.

Take care, my friend.

More spoofed garbage from Grim. As you can see they are jamming this newsgroup just like they jam on hf. If you ever want to be able to view a decent post again you need to get a hold of the trash providers this guy has and get his rhetoric cut off. Otherwise these unemployable morons who sit at home while their wives work will jam the group 24 hours a day. I'm not kidding,I wish I was.

600. Cost of Connector Manufacturing Equipment?

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-13 00:00:00 UTC
From: Matthew H <thatguy@mindless.com>
Message-ID: <3532A7B1.B926CAD1@mindless.com>
Source record: 173953

I was just wandering if anyone knew how much the manufacturing equipment to make miscellaneous connectors such as PL-259's and mini PL-259's would cost? I'm referring to the presses and assembly line equipment that would be required to make them. The connectors seem to be priced outrageously high.

Thanks

From: tewhite@banet.net
Message-ID: <3532BB5A.7C2D@banet.net>
Source record: 173955

i posted this message on the truckers rountable:

I know that some AM radio stations are allowed to increase their transmitting power to 50,000 watts after dark. When we lived out west I used to listen to KKOB in albuquerque while we were traveling and camping. What other stations are there out there that increase their power after dark. Are there any particular stations that drivers like to listen to.'

i received this reply:

Those 50,000 watt stations are that wattage ALL the time.

Propogation is better after sunset, AND the other staions sharing a frequency with a "clear channel", 50,000 watt station must either go off the air, or REDUCE their power.

is this true? i thought that certain stations were allowed to INCREASE their wattage after dark. any comments will be welcome.

The local Walmart never had any. The one 'bout 10 miles away had one. A
demo with no box or warranty for $29. I didn't buy it.

I may be wrong, but the international treaty says something to the
effect that to operate HF, you must be be able to "receive by ear"
Morse Code. How would you demonstrate that you can do so without a
separate test?

50,000 watts is the maximum allowed in the AM broadcast band and these stations operate that constantly. These 50KW stations are assigned "clear channels" which means that there are no other stations within the daytime or nightime propogation range is allowed on that frequency.

Some other stations which "share" channels are required to either reduce power or change their antenna patterns after dusk, or both.

Some of the more notable 50KW stations are WLS in Chicago which I think operates on 890khz, and WLW operates on 700 khz. This one is one of the trucker's favorites and they cater to the truck drivers late at night. There is also WBT in Charlotte NC but I have forgotten what their frequency is. You can take almost any tabletop radio and pick up some stations 1000 to 1500 miles away at night. If you are interested in this sort of thing, there is a device called a "Select-a-tenna" which GREATLY enhances AM reception on most AM radios. This thing sells for $50-$60 in certain mail-order catalogs, uses NO batteries or electricity, and makes NO connections to your radio. All you do is set it next to your AM radio and tune it to the frequency and you will hear stations clearly that you could NOT hear before. I have one and I was skeptical at first but am a real believer in the "Select-a'tenna".

606. Contest rules question

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-13 00:00:00 UTC
From: dsrekbtp@prism.gatech.edu
Message-ID: <6gumit$b2l@acmex.gatech.edu>
Source record: 173959

What constitutes what the ARRL terms an "immediate adjacent guard
frequency" to the national simplex frequency at 146.52 MHz?

I'm hoping I didn't break any rules tonight during the 144 MHz Spring
Sprint. I worked a couple of folks on 146.535 MHz, which is utilized as
a local-option simplex frequency in Gwinnett county, East of Atlanta. But
it also looks like it's a prime candidate for being an "immediate adjacent
guard frequency". If it indeed is, I suppose I ought not to score them.

Back to morse code,

From: wt2@prism.gatech.edu
Message-ID: <6gs4rc$nd@acmex.gatech.edu>
Source record: 174014

For all Georgia, USA residents, or people who like to drive. I have found a supply of the Emmerson Research "Atomic" clock radios at the Super Walmart in Hiram, Georgia. They had about 6 tonight.

They have been marked down from $38.95 to $19.95! I got one today, and it works great! I checked the Wal-Mart on Hy-way 41 in Marietta, Georgia, but they did not carry them. The store is on Thornton Road, and there phone number is (770)-439-1028. And NO, I do not work for Wal-Mart. I just had a hard time finding this radio. Later, BiLL

Take no offense, Walt. It's just Carl's way of demonstrating that the rest of us are "Ugly Americans". He takes the view that if some us believe Ian in N.Z. to be a git, we're bashing foreigners. I'm certain that he doesn't see the possibility that we simply don't care for Ian.

I saw a guy in Africa who could do cartwheels with a serving tray full of drinks and never spill a drop. I don't, however, go around telling folks that all Africans can do it.

Many contesters operate in the 100w class--hardly likely to stomp anyone in the dust. Others operate QRP--guaranteed not to stomp anything into the dust. Since not everyone is perfect, you could have seen it on occasion. You could also observe the same in any other segment. You'll have to regale us with tales of your particular training in the emergency arts, Carl.

623. Stumpjumpers/BARF facts.

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-13 00:00:00 UTC
From: w4nti@cannet.com
Message-ID: <6gsob2$ap9$1@nnrp1.dejanews.com>
Source record: 174020

For those that dont know, the Stumpjumpers and the B.A.R.F. (Better Amateur Radio Federation)... actually the Bigoted Arian Radio Facist's, are basically one and the same. The A.R.G. (Abernathy Radio Group), is a collection of sociopaths that have alligned themselves with the above mentioned groups.

The beginnings of these groups can be traced directly back to Mr. Herbert L. Schoenbohm, KV4FZ. He began his anti net campaign well over 20 years ago, of 40 meters. Later moving this activity to the 20 meter band and the Intercon network.

Over the years his activity has attracted many others of his ilk. Jammers, Liar's, harrassers, etc. The end result is what you see on 14.300/14.313/3901/3894.5.

Mr. John A. Abernathy has for years operated mainly on 75 meters. He was removed from amateur radio for jamming, and let his call of K4OKA lapse. A few years ago he returned as KJ4JX, and with the vanity system received K4OKA back. He still jammes with impunity on 75 and 20.

This short synopsis brings me to the present day. We now have a campaign of organized jamming on the ham bands. This is a direct result of KV4FZ and ALL of his sociopath followers.

Now we have the James Obrians, covicted drug abuser. Frankie Todd, no amateur call, supported by the stumpjumpers in his jamming of 3901. K4OKA, still jamming to his hearts content. George Ashley (W4FQF), Billy Jack Moore (W4LLI), Joe (WA4KBX) and others, that sit nightly on 3901 and disrupt legal on going communications, soley because "Big Al" ordered it. I could go on forever on who is doing what.

Now this "war" has escallated to the internet. How much longer are we going to have to put up with the slander, the libel, the outright lies? Freedom of speech is a wonderful thing. But dont you think that we have rights too?

I am trying to sell all or most of the remaining equipment.....if you would only be interested in one small item; I would prefer to try and sell more of a package.....
however, I am open to fair offers on the package deal! Thank you!!!

Due to illness in my family and needing to move I'm trying to sell my entire shack. Some pieces have sold and this is basically what is remaining. If you are interested in some very, very good equipment; please believe me it is in excellent condition and well cared for; give this a look and/or tell your friends. No one will be cheated!!!

Any of you who loves the hobby would understand that this is a difficult time and experience to be faced with and I have no desire to hurt anyone by pushing off this equipment and have no hidden motives other than those expressed here!!!!!

Yaesu FT-ONE HF rig. (top of the line in it's time...$3000.+) Dual metering and dual digital displays along with 12 separate LED status indicators. 24 keys including a numerical keyboard, split frequency operation, scanning and 10 VFOs operable, multy tuning rates to 10 Hz, automatic mic gain control, noise blanker, RF speech processor compression level, SWR meter adjustments, FM squelch, key speed, vox gain and delay & PIN attenuator as well as the usual controls....100 watts capable. Has operation and tech. manuals!
COMES WITH a Drake WH7 wattmeter, Yaesu SP102P Phone patch/Speaker, MD-1 series desk top dynamic microphone, code key and all recently factory upgraded, serviced and tuned.....radio works on 220 or 110 v. also includes headset ear phones, filters.

Pakratt232, Model-232MBX t.n.c. with AEA software.

HF & VHF/UHF Dummy Loads.....misc. lengths of very good coax, side mount brackets for tower which allow you to add additional antenna.....

Diamond X200A 2m/70cm dual band high performance gain vertical base station antenna.

Lot of books (ARRL Antenna and Hand Books plus many more).....practice code on AEA codemaster, model mm-2.....or homemade key practice setup, extra speakers, and lots of misc.

Everything but the Drake meter has manuals/paperwork!!

Willing to make a package deal for someone interested in all of the items listed!!!!! $1350.00 gets it all!!! There is a treasure chest of misc. items alone!!!!

Thank you, please contact "rcbaum1@enter.net"

>
> can anyone tell me why if I transmit on 2 m. (147510)
> why it interfers with cable channel 18, but but the others.
> thanks
>
> merlin
>
The frequencies used for cable channel 18 are within the "2 Meter" band. They extend from 144 to 150 MHz. Audio carrier is 149.750 MHz, Video is 145.250 MHz and the frequency for the color subcarrier is 148.830 MHz. Cable companies are to keep their radiation entirely within their coax cable, and any leakage is considered to be against the law. However it is not practical to expect zero radiation from the cable, and they routinely exceed the allowable limits with little chance of being held accountable. Unless their signals are interfering with a public service agency or government, you can pretty much forget about the FCC, DOC, or whatever taking any action.

To answer your question, when you transmit, you cause interference to TVs and VCRs on channel 18 because they are actually receiving on the frequency you are using. If you are simply getting into the nearby unit, then only it will be affected. If you happen to be getting into a leaky cable system, your signal can be carried for miles. The interference is strictly the problem of the cable system, it is their fault, and you are in NO WAY liable for the interference - regardless of any B.S. they tell you or their customers. Try telling that to your neighbours, though ;-)

If you are posting this question because you are getting complaints, then give the individuals the number of the local radio inspector - so they can hear the truth directly from those in charge.

W4NTI spewed these words while inder
and Viet Nam war flashback:

>blah blah blah blah blah blah blah blah

As far as I'm concerned, BOTH groups are
scum and a cancer to ham radio! I've heard
Herbie in the act of jamming one minute, then
you turn around and hear the same thing from
OTK. You cry that Herbie is a "convicted felon",
yet OTK has refused to pay his fine and now
it's learn that he's stolen from people by
bouncing checks. Fine pieces of humanity!

"Big Al" has the filthiest mouth on ham radio
while "Doc" will PURPOSELY try to start
trouble by making one of his anti-Christian
remarks. I hear people say the "Stump-jumpers"
are some type of racists. Have you ever heard
the racist jokes that OTK and his pals have
told on frequency?? (Here's the punch line from
one of OTK's racist jokes: "No...she's actually
a little white woman about this tall....") And
this little punk "Frankie" needs his pants taken
down and given a good spanking! (But
something tells me he might enjoy that....)

Years ago, I wrote the FCC and asked them to
treat 14.313 like the teachers use to treat the
entire class when it got too out-of-hand. Punish
the whole class! I suggested "busting"
EVERYONE who hung out on that frequency.
Needless to say, they didn't pay any attention.

Source record: 174032

ti2dll@iname.com asks:

I would like to learn morse using the Koch method. The Ham Radio FAQ says taht a good way to work the Koch method is with a morse tutor on your PC: to have the PC send you two characters many times and try to distinguish between the two, then when you get your accuracy up add another and another and so forth. Only problem is I haven't been able to find a program that adapts correctly to the Koch method. Any suggestions on what programs I can use and where I can find them?

The Super Morse program, available from the oak.oakland.edu FTP site, will adapt to the Koch Method. Also, the MFJ-418 and MFJ-414 Morse Code tutors can be used for Koch training. For full details on the Koch Method, Morse Code history, CW operating and more, check out the book, "Morse Code: Breaking the Barrier," published by MFJ Enterprises, Inc. (MFJ-3400).

For more information about the book, check out the Web site:

The Professional Partnership Program is a site-license providing an unprecedented level of electronic simulation and synthesis capability at virtually no cost per user. For a one-time investment of $975, the Program provides to every engineer and designer company-wide:

Nodal Circuit Analysis with True Two-Node Port Definition
Unconstrained Noise Analysis
Transmission Structure Synthesis & Analysis
Over 40 Single & Coupled Topologies
Strip (Planar) Structures
Wire Lines
Coaxial Arrangements
Waveguide (Non-TEM) Topologies
Passive Filter Synthesis
Lowpass
Highpass
Bandpass
Prototypes
Practical Reactively-Coupled Realizations
System & Receiver Design Support
Link, Terminal & Radar Analysis
System Architecture Characterization
Spurious Analysis
Transmit & Receive
Coincident & Tuned
Preselector & Output Filtering
Phase Noise Analysis
Time Domain Effects
Frequency Domain Effects

600+ Page User's Manual with Examples & References

Join the Program and you will be furnishing all of this invaluable capability to every designer, not just one! Our competitors are furious with us for having created the uniquely progressive opportunity. It seems they're still using dongles to hinder access to their own products.

Please contact me for additional information. Or, see:

Does anyone know where one can purchase an electronic device that can "hear" ELF and LF frequency signals i.e. "dawn chorus", "whistlers", "tweeters", "train" sound", "flutelike" sounds, "decending/ascending" strings sound.

If so, please post here. I'm interested in purchasing one. Thank you!

About 15 yrs ago, I had a drake b line. I was doing some work with a theatrical lighting company, and had a bazillion swatch samples of thier plastic filter material. Almost any shade of any color you could imagine. I used some the the mateirial as filters to make my drake dial illumination any color you could imagine. Finally, I found a color that stuck! I believe it was a light turquose color. This stuff was heat resistant, and i will bet whoever has that rig still has the filter unless he doesnt like the color. I also have some rare General Electric light bulbs in 60 watt soft white for sale for only $5 each. I have some Sylvania units for $7.50Don

>are different than the skills one might use in an emergency. My
>neighbor next door is #59 in the stock-car, figure-eight enduro at a
>local track. He drives quite rationally on the street.

But in a high pressure emergency situation anyone reverts to their
training. And the training a contester/Dxer gets makes him want to be
aggressive and competitive rather than being cooperative. This is
the main problem. A contester's radio skills are likely quite good.
His usual station is also likely to be quite good. But his basic
instinct in the clutch is different from that of the traffic handler
or emergency communicator. His first instinct won't be to ask
for a relay. His first reaction won't be to shut up and let someone
with better copy handle the situation. His first instinct will be to
pile on and try to make the contact.

That's the way he has trained. But it is usually exactly the wrong
thing to do in emergency communications. It takes a cool head to go
against one's basic training. You're fighting a behavior that has become
so ingrained as to nearly be a reflex. The military understands this.
They have a motto, "Train the way you'll fight, and you'll fight the
way you trained." When the adrenalin is pumping, we fall back on
conditioned reflexes. That's true in a gunfight, and it is also true
in a life or death emergency communications situation.

In solo events, like auto racing, contesting, or Dxing, such reflexes
are pro-survival and pro-winning. But in most emergency communications
situations, we're talking about team effort. Winning isn't important on
an individual level, but ensuring that the net's messages get passed
accurately and rapidly is important. A team member won't go for the

basket every time, he'll know when to improve the team's chances
by passing the ball. His personal score takes a back seat to the team's
score. That's a concept that goes against the training of the contester
and Dxer.

Typically, the lack of up to date information by Carl the Codeless showing yet again, I see from reading other's references to his posts. He really believes that reserves today are non-entities. He should consult someone who really knows, or just pay attention to Jeff. Clearly he knows. Currently all forces- Army, Air Force, Marines and Coast Guard are in process of being reduced in numbers to a total of 500,000. active duty. That's 'way below half what we have normally been accusomed to. I'm told that the target is actually 400,000. *At least* half of all combatants in future events will come from the reserves. If Carl the Codeless really was on the ball, instead of just pretending, he would have noticed the huge numbers of reserves that were deployed during Desert Storm. And those on standby more recently when Saddam Hussein acted up.
That's only half the story. Presently we are selling at surplus, for very few pennies on the dollar, a huge portion of the results of the military buildup during the Reagen years. We are selling much, if not most, to overseas buyers who are channeling it to our prospective enemies, by accounts in the news media. Included are warships, tanks, trucks, even a delivery system for nuclear warheads!
Is no one still conscious in DC? Can't anyone see that we are "giving" our enemies the hardware that we mortgaged our kids future to buy so that the buyers can eventually use it on us? Didn't anyone think of just junking it ourselves, if we no longer need it, instead of selling it intact and usable?

Actually, the "serious" contest operator (the type that is the focus of this discussion) is usually calling CQ and aswering those who respond. In this case, he or she would not have the benefit of listening to the station worked before.

> > While that certainly *could* be done, the fellow who lurks on

By that token, Carl, would you offer that all of that Spread Spectrum gear would be available in the same emergency situation. I suspect that any emergency that knocks out the big guns and the cobbled-together CW rigs would also affect your favorite equipment, too. :-)

Welcome back!

To a ham that is too much, but there are plenty of CB'ers that will gladly pay that for an amp that will match their Siltronix (Swan) 1011's. You probably didn't think of that before you opened your trap did you?

Subject: ** FLEA at MIT ** Sunday April 19th Cambridge MA
Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

Only one week away....
The season's first...

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday April 19th, 1998
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

Sellers Season Passes are again available until
April 19th for only $50 per space for all 7 meets !!

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all

sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

Are you for real? You think it's OK for a police officer to break the law? You think it's OK for a police officer to hear you give your credit card number over the phone for a mail order? You think "Big Brother" should be able to listen to private conversations at will? Even the Supreme Court said wiretaps can be used only as a last resort. Does your employer know you are this ignorant? You are a pushover of the worst kind. Like it or not, there are a lot of dishonest police officers out there hiding behind a badge who would love to know you are leaving town for the weekend. I just don't believe you really think that. OH, I get it, you are just trolling and I fell for it, HA HA HA jokes on me!

661. ADMS-1D & VX-1R Rant

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-14 00:00:00 UTC
From: staroscik@sowest.net
Message-ID: <6gv22p$178$1@nnrp1.dejanews.com>
Source record: 173968

I have been using the ADMS-1D (v1.03) software for some time with my FT-51. Tonight I had the unpleasant experience of using it to program my VX-1R.

- Radio data files (*.rdf) keep getting corrupted. Open a file, make a change, and more likely than not you'll never be able to open it again. What gives? I of course discovered this the hard way, after I spent a couple of hours typing freqs into the computer. Fortunately RT Systems has a patch which claims to address this... it's downloading now. Fingers crossed.

- Importing memories from other RDF files is terrible. You are forced to import blindly, with only a comment keyword filter to aid you. You cannot import into the VX-1R's Group 2 memories - this results in a Windows error that brings the programming software down.

- In the freq entry screen, there is no copy & paste functionality as there is in the 51 programmer.

Ok, I just had to rant. Hopefully the patch will rescue my data files, in which case I'll be able to live with the software's other quirks.

662. ADMS-1D & VX-1R Rant Update

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-14 00:00:00 UTC
From: staroscik@sowest.net
Message-ID: <6gv3d9$3l7$1@nnrp1.dejanews.com>
Source record: 173969

The patch on www.rtsars.com for the VX-1R programmer does NOT allow me to open the corrupt rdf files the software generated earlier. I get a different error message, but the files remain inaccessible. The patch updated my v1.03 to 1.04. If you are about to go program-loco with your VX-1R, make sure you download the patch!

Importing memories from another rdf file into open file's Group 2 memories still causes a GPF.

The "Import" function (which I never played with) has been removed.

There is one on Mt. Mitchell, NC at 6600ft highest point on the eastern coast. It is on 53.63 and 100hz pl access. Great coverage, and from the reports it covers much better than the two meter repeators.

How many things can we ban today in the hopes that it will "save the life
of even one person?"

Red Meat?
Automobiles?
Guns?
Cars?
Cigarettes?
Salt?
Sex?

Don't forget: your criteria is "even ONE life"

>Just my opinion,

Unfortunately, your opinion is indicative of that held by so many
Americans who are willing to piss-away their fundlemental "rights"
to some "feel-good" politician who promises to make them warm and
fuzzy through larger government protection and programs.

Hi Joel,

Geez....you're closer to my parents than I am! They're at Apache Junction. So, how's things out in AZ? Sure wish I was out there...I'm very partial to New Mexico and Arizona...from Alamogordo to Tucson/Marana. Spent a lot of time between there. Good to see you in here. Have fun and don't let the scorpions bite.

We have been set a challenge at college to overcome a security system. The team designing the system is to use a tx'er with a frequency in the range of 90 to 500 MHz. We as the infiltrator team have not been told which frequency they are using. My idea is to make some sort of jammer for the frequency range given. This only needs to operate over a 12 square meter area as we are using a screened room.
Any schematics for such a jammer would be greatly appreciated, as would any other ideas.
Any correspondence please e-mail me at stuart.g.roberts@btinternet.com with the subject as jammer.
Thanks in advance,
Stu.

>I, for one, do not mind law enforcement
>monitoring any of my conversations. I say
>let them monitor at will. What will it hurt?

Then you will allow them to bug your house, what will it hurt?
Then they might "decide" that you said something that could be construed as, say, willfully avoiding taxes when you bought something mail order and failed to inform the state of the taxes you owe on that item. What will it hurt?
If we can't depend on the cops to obey the laws they are sworn to uphold why do we bother making laws?
>If it saves the life of one person who
>will not be killed for a crack rock by
>a drug crazed junkie, it's well worth it.
Police are NOT there to protect ANYONE. The Supreme Court has already said that police are not REQUIRED to protect any one individual. There function is to investigate crime that has ALREADY happened. Even the simple radar trap does not prevent speeding, it only catches those that already ARE speeding.
>Privacy only benefits those who run afoul
>of the law.
Privacy benefits ALL, it helps PREVENT those with power from abusing it, just like that ex cop did. Suppose he got his cell phone conversations mixed up (cuz he is not trained to use the illegal gear he had) and busted down YOUR door in the middle of the night. He couldn't find the drugs that he KNEW were there. So, instead of looking bad he just plants some. Now you're in jail and he's the hero. Again.

LOL! Jimmy nObrain you are a complete moron. You make stupid people look smart. If you would learn to stop jamming moblie stations on 75, if you would just stop spearding hate and lies around the ham community maybe everyone would stop harassing you. On a earlier post you said something about someone being unethical. My God Jim you have to the biggest lier on the net. Haven't you been using another person's call sign for your own mailbox? Is that ethical? I'm sure that everyone has no reason for attacking you. They just do it for no known reason. Lets face the facts here Jimmy nObrain you are a complete idoit! You Jam 75 as well as 20, and the only thing you can jam is moblies. You have about one week signal. What is it about N3CND you don't like? Is it the fact that his web site is more imformative and constructive then yours (by the way where is your web site. Now did they kick you off of another server, again!?) Is it the fact that his signal is better than yours? Is it the fact that his lifestyle is so much better then yours? Or is it the fact that his family truly loves him and your family will not have anything to do with you. The only women that you could find was one suffering from empty nest syndrone. By the way how is Mr Wrong way, that is Donna's Exhusband's CB handle isn't it. I bet deep down in her heart she knows she made a big mistake with you. Well Jim I hope you have a nice day. Drink another beer and take another hit off the bowl and you'll be as normal as ever. Have a nice day. You idoit!

I've noticed this if you have cellular freqs programmed in your radio. Also when you try to use the same rdf with other than the original radio. It is a pain because I have two vx-1's one is my xyl's. If anyone knows a fix let me know too.

I think you are under estimating here, Jeff. Every time a privately owned 'yacht' pulls away from the pier, it's a distress situation. And 98% of the cocktails on the fantail set are so broke they can't afford commercial communications so they use the ham bands as their business/rescue frequencies.

73, Jim KH2D

P.S. Read that stuff you posted a few weeks ago and then let me know how this sailboat stuff classifies as DX.....

You didn't break any 'rules'. The ARRL doesn't make rules, the FCC does.
The ARRL only makes suggestions for band plans, sometimes called
'gentlemens agreements'.

I quote from the manual:
...passive probe with 10X attenuation...used with plug-in units or oscilloscopes having a 1-megohm input paralelled by 14 to 21 picofarads, and is factory calibrated for 20 picofarads. It is available in 3 lengths: 3.5, 6 and 9 feet. Attenuation 10X plus or minus 3%. Max DC or AC peak input voltage is 500 V below 12 MHz. Risetime is less than 2 nanoseconds with the 3.5 or 6 foot cables, and less than 4 with the 9 foot cable. I will copy the whole manual and send to you if desired for $7.50 postpaid. John, K2CIB

No matter how distasteful his personal views might be, I don't agree with someone else's suggestion of contacting his employer. The subjects he teaches are pretty objective, especially electronics. Ohm's Law is still true regardless of how we feel about the BF. Kids are pretty sharp today - his students can surely seperate the BF's bull from circuit analysis. (At least those classes are electives!)

I'd be interested in seeing one of the BF's exam papers for his electronics class.

I'm all for the freedom of speech, but very much against
spam. And that is what KK7HO and his buds are up too
at this time and it's disrupting the newsgroup.

I think an organized TELEPHONE campaign to AOL might help
to alleviate the problem. Does anyone have a toll free
number for "America On-Line"??

I've noticed that Curtis, N5HDQ has stopped his spamming.
I hope it was voluntary, and if it was---thank you
Curtis.

Now if we can get rid of KK7HO, QRO1500 and a few other
aol'ers, it certainly would be a big step.

Mike

> Larry WC5Y

The P6010 is a DC-50MHz probe. Some of the spec. are 10 Meg input resistance, 500 voltage rating, 10 pf. This probe is a voltage divider meaning you must multipy all readings by ten, thus the 10X shown on probe. I beleive this was the probe that shipped with the 453 scopes when new. This would date them from the late 60's. BTW nothing is old unless it's older than me and than it's worn out. 73 Tom WB6IQD

707. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-15 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6h1ug4$huh@news.Hawaii.Edu>
Source record: 173919
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Archive-name: radio/personal-intro
Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH2PZ, (jeffreyh@hawaii.edu), or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Andy is correct. I would add that some stations must cease broadcasting at night, while others reduce power and/or change the radiation pattern.

WPTF in Raleigh NC has a challenge. The general rule is that the newest station must "protect" the existing stations on a channel. WPTF is a powerful, omni-directional station until local sunset. Then it changes from one tower to three, creating a complex pattern which "nulls" the signal to the midwest, but puts a large chunk of RF energy out over the Atlantic Ocean. They get frequent reception reports from Africa.

WBSC in Bennetsville, SC requires five towers to accomplish its pattern.

You can buy them cheap at Radio Shack, but they will not work as well as the "professional" versions available elsewhere. Hamfest price is around $1.00, these days. A cheap PL-259 will cause you a lot of headaches. (Ask me how I know!) <grin>

721. Mod found for DR-605T

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-16 00:00:00 UTC
From: schmitzj@cc.tacom.army.mil
Message-ID: <6h4nid$3ig$1@news.klondyke.net>
Source record: 173926

I have tried an experiment and it worked. I researched how alinco has done their mods on their other radios and I found they usually have a red and blue wire which opens up the TX. The DR-605T only has a blue wire. After removing mine I found that the radio can now transmit from 135 to 173 and from 400 to 499. I make no promises. You're completely on your own.

Steps:

1. Remove the top cover (four screws).

2. Hold the radio face down on a cloth.

3. If you look down inside the front cover you can see the single blue wire. It attachs to the surface of the board with two solder joints. Remove the jumper.

4. Replace the front cover.

5. Hold down the function key and repower the radio. This resets the computer and you will lose your memory channels.

Remember it is illegal to transmit out of the band that the radio was type classified for...

Hi good people of the radio fraternity.

Does anyone know of a web site which documents examples of all the different sounds and noises besides speech that can be heard on radio?

I've recently bought a SW SSB receiver and can receive all manner of chirps, whistles, and bleeps besides the discernible voice and CW signals. I'm sure most of these are FAX, SSTV, RTTY, and other digital types but it would be good to use a web site that documents signal-types (preferably with a realaudio or .wav sound of the signal-type).
Maybe the site could point to demo versions of downloadable software that can be used on a computer with a sound-card to decode them when an audio feed from the headphones socket of the receiver (or tape recorder) is sent to the mic socket.

Please let me know, and thanks for any help.

Well I wonder if our American friends think we are dumb. Well I was surprised that when I decided to send out a followup usenet message, I was asked if I want to send it to all 9, yes all 9 usenet groups that the original message was sent to..

You'd think that these people would work out that USENET has groups to place relative information and you don't have to SPAM 18,000 groups to get a message across.

If I wanted a flaming RADIO FROM THE US, I would check out the REC radio newsgroups. YANKS, don't treat the world like idiots because we can search usenet ourselves and we do appreciate that you just don't want us to miss such an incredible offer !

Thinking about QRP?

Thought about it in the past and aren't sure it's for you?

There will be a number of QRP-related events coincident with the
Dayton Hamvention:

Thursday, May 14 all-day QRP ARCI Technical symposium
QRP hospitality suite
Friday, May 15 QRP Forum at the Hamvention
QRP ARCI Banquet
Saturday, May 16 Vendor social / NorCal building contest

For information, check the following web site:

http://www.qrparci.org

or feel free to ask for more information.

728. 2 way QRP, 32 states in one weekend

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-16 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6h56sd$8lj$1@w3eax.umd.edu>
Source record: 173933

Worked, in 9 hours' time, 86 QSOs which were 2-way QRP with nothing more than my IC-706 (running 3w) and my mobile-mounted Screwdriver antenna.

This occurred during QRP ARCI's Spring QSO party. I managed to work 32 states, CW, QRP-to-QRP.

These contacts were spread across 80, 40, 20, and 15 meters.

To those of you who spend your time whining and complaining and doing everything BUT operating, I truly feel sorry for you and encourage you to work on your skills so that you may someday be able to experience this feeling of having done something well.

(with the exception of whining and complaining, of course)

It's out there waiting for you; go and get it.

To Whom it may concern,

Guns don't kill people -- People kill people. People have been killing other people for literally THOUSANDS of years before guns were invented.

And what are you going to do after guns are outlawed? -- Someone could be killed with a tree branch. Are you going to ban trees?

I find it more apalling that 30,000 people are killed on our nations highways every year! That's the equivalent of a SMALL TOWN every year! Besides, someone could go nuts and drive their car down a sidewalk at 60 MPH and kill a lot more people than with a gun. (Check the news reports -- people have already done this). Shouldn't we ban all cars?

How about banning blunt objects, anything remotely poisonous, electricity, kitchen knives, tall buildings, etc...

I mean, GET REAL folks!

I saw this statistic the other day RE: the number of people *KILLED*
by guns per country in 1996

I'm doing this from memory so the actual figures may be off a bit
except for the USA but none of the following were over 200

Japan - 60
Austrailia - 70
Canada - 120
England - 70

Countries Above have STRICT gun control laws

USA - 9430 !!!!!!!

Yeppers We NEED *MORE* guns *AND* easier access to them !!! More
bloodshed that's what we need !!! More 11 and 13 year old boys
BLASTING their schoolmates, just think in the Arkansas incident if
their schoolmates (11 -13 year olds) had all been carrying say 9MM
Glock17's and some 12 Ga "Streetsweepers" they could have retaliated
with round after round of opposing fire until the police arrived. More
GUNS that's the ANSWER !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

>

I guess that means these numbers are the police and government killing citizens.

I think that if you compared the legal systems of the USA and these you'd find an interesting difference. WE CODDLE OUR CRIMINALS.

If we punished those sent to prison, maybe they wouldn't do it again, or at least think about it. There has been interview after interview and report after report where inmates say thay can do the time standing on their heads. What with cable TV, conjugal visitation, recreation rooms, medical/dental/psychological treatment, healthy meals, ..., why in the world would a criminal EVER fear incarceration.

We complain when we see a Keaton go to the Country Club Prisons, and complain when we hear that it takes $40-75,000 per year to imprison a criminal. No wonder the rest of the world sees us as foolish and naiive.

An eye for an eye. If someone murders another, they lose their life. Remember what murder is - the crime of unlawfully killing a person especially with malice aforethought.

Hey - self defense isn't even manslaughter (or murder, either). Arming yourself or protecting yourself isn't malice aforethought, and isn't unlawful. The law doesn't say that if you are attacked you must allow yourself to be injured or killed. You are allowed to defend yourself, even

unto killing your attacker. Our courts don't uphold the law, but we should.

Mark

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

The Radio Amateur is:
CONSIDERATE...never operates in such a way as to lessen the pleasure of other's. (unless of course it is a contest).

LOYAL...Offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally. (unless of course money is involved or in many cases little support shall be given if the ham is old (almost always the case) and the new ham is young).

PROGRESSIVE...with knowledge abreast of science, a well built and efficient station and operation above reproach. (unless of course you have any money the you become an "appliance operator").

*FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance,cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit. (unless of course it is a flea market (every man for himself).

BALANCED...radio is an avocation, never interfering with duties owed to family,
job, school, or community. (this is rarely true. A good contester will leave the family on Christmas if there were a contest, a local kid, known as "The breather" sits by his "hamradio" day and night talking to anything that comes along except of course a girl. Finally the only thing most hams will leave their "ham radio" for is a cup of C O F F E E.

PATRIOTIC...station and skill always ready for service to country and community. (unless there is DX around or a contest, in such cases it is accepted to ignore any emergencies).

Please visit my World Wide Web Site, you have never seen a page like it.

745. Help Please! - locating Meteor/asteroid article(s)

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-16 00:00:00 UTC
From: Dick Harper <dharper@sprintmail.com>
Message-ID: <3536EEA1.44D4@sprintmail.com>
Source record: 173950

Hello,

I'm trying to find the publication (I believe it was within the past 12 months) where I read about the possibility a communications (HBO TV)satellite was possible killed by a meteorite. The article mentioned it was observed spinning with an observatory telescope. It mentioned how programs were moved to another satellite until another one could be brought into the damaged one's station (possibly G5).

The article also mentioned how within the not too distant future the Earth will be passing through an asteroid belt that could damage many commercial satellites.

The same or another article was accompanied by a drawing of an early American setting with meteorites looking like fireworks in the sky.

Any references appreciated.

Thanks for reading,
de N0USP,
Dick Harper - dharper@sprintmail.com

746. Help needed with Saiko scanner

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-16 00:00:00 UTC
From: rexstout@uswest.net
Message-ID: <rexstout-1604982220040001@dialupd235.ptld.uswest.net>
Source record: 173951
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner,sci.electronics.repair

Picked up a Saiko SC 292 mobile scanner at a hamfest a few weeks ago, but I'm having a few problems. It's a very interesting scanner(covers 26-30, 68-88, 118-178 & 380-512MHz), and I would like to get it running again. First, I can't find any info on this thing anywhere. Second, the LCD display is dead, and when I tried to fix it I may have made it worse. So, I am looking for schematics, a users manual, and/or contact info for the manufacterer(Saiko... Anyone ever hear anything about them?). Any comments or suggestions on this radio or general radio/LCD display repairs would be appreciated. If I can't get the display/keypad to work, I'm thinking maybe I can setup a remote head for this thing. It only uses maybe 10 or so wires to conncet the radio to the display part. Is that worth trying, or should I just scrap the thing for parts?
TIA & 73's

It's funny that alcohol kills more people in this and other countries
but no one seems to want to outlaw it. I wonder why. . . .could it
have been that the last time we did, it didn't work. Alcohol is the
most insidious drug we have today and no one cares. . . Keep the guns
and ban the booze. . .

Research yours ....

Let's take the highest one (Canada) and divide it into 9430 , 9430/120
= 78.58 .... Mr. Wizard does the US have 78.58 X the population
of Canada ??????? How about Japan 9430/60 = 157.16 , Does the US
have 157.16 X the population of Japan ?????????

Guns Guns Guns , we need MORE guns, more assault rifles for "Hunting"
more sniper scopes , more Handguns , we NEED MORE GUNS !!!!!!

MORE Guns that's the ANSWER !!

We are pleased to confirm the operation from a new HV ham station from the Holy See.
His Eminence Cardinal Edmund Szoka, President of "Pontificia Commissione per lo stato della Citt&#65533; del Vaticano, release the authorization.
The station will be active on 23 April 1998 at Pontificia Universit&#65533; Lateranense, the Pope's University, during the 2 Lateran Opening Journey.
The station will be active on 20 meters cw and ssb and possibly on 2 and 6 meters.
The callsign will be HV5PUL, and the station we'll be operated by IW0DJB, the station manager, IK0OER, IW0BET and others during the "Seconda Giornata Lateranense".
Some "tuning operations" starting from 18 April.

For much info check http://www.pul.it. e-mail: puladmin@librs6k.vatlib.it.

in Japan, police never used their guns even though they carry them (if
they shoot once to someone (suspects), it will become a big news as to
why police tries to shoot suspects). maybe that's why # of killed
people by guns in japan are low... and actually safer compared to
other countries (well... japan is kinda becoming dangerous now
though).

Source record: 173865

Good morning,

The members of the radio club at Grand Valley State University, W8GVU, are very proud to have a new 4 el, 5 band cubical quad HF antenna, wind loading about 6.5 sq ft.

We originally planned to install the antenna on our own tower, but now must use an existing one on an adjacent building. There is only a single vertical VHF antenna there now, and we will mount that above our new quad. However, that tower will accept only a 1.5" mast. We planned on a 2" mast with thrust bearing.

Can anyone here advise us? Will there be a problem for us if we mount this rather large antenna on a 1.5" mast and no thrust bearing?

Thanks!

> say it is their freq and go out unless you have code.
>
Apparently you don't and probably have never listened to the ham bands
or you will know you stuck your foot in your mouth. The solar cycle is
on the rise and 10m activity will rise along with it. If cb'ers want to
get on 10m, get a ham license, it's very simple to do. If there are
millions of CB bees(?) out there how come no one is on CB? I know no
one is on CB other than truckers because I actually tune across 11
meters now and then, do you? All it takes is passing a 5 word per
minute code test and 2 written exams to get on 10 meters legally. Have
you ever heard 5wpm code? It's just about slow enough to look up what
each dit-dah combination is. There are several very young people- 8
years old and up, that have passed the 20 wpm code test! If an 8yr old
can do 20 wpm, you would think an adult could learn to copy 5 wpm.
If you want on 10, get a license. 10-4 Good Buddy?

760. 2 meter HT For sale: Kenwood TH22AT

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-17 00:00:00 UTC
From: Ron Jones <jones@chemistry.chem.utah.edu>
Message-ID: <35375FA7.AC2D53AE@chemistry.chem.utah.edu>
Source record: 173867

2 METER HTï¿½S FOR SALE . . . . . KENWOOD TH22AT PLUS A FEW EXTRAS

I have a pair of Kenwood TH22AT 2 meter HTï¿½s for sale. They each come
with the stock ni-cad battery and charger plus each has an alkaline
battery case and each has a speaker mike. If you arenï¿½t familiar with
the TH22AT, they are small enough to fit in your shirt pocket yet they
are loaded with lots of features such as paging.
I would like to sell them as a set, however will sell them separately:

$175 each or both for $335.

ARLP016 Propagation de K7VVV

ZCZC AP16
QST de W1AW
Propagation Forecast Bulletin 16 ARLP016
From Tad Cook, K7VVV
Seattle, WA April 17, 1998
To all radio amateurs

SB PROP ARL ARLP016
ARLP016 Propagation de K7VVV

Solar activity has remained fairly high over the past week. Average sunspot numbers were up almost 30 points, and average solar flux was about that same, at 122. Average solar flux for the previous 90 days went up another two points from 102 to 104, and flux values were above these levels on every day, indicating a good upward trend.

April 9 saw a new high in sunspot number for the current cycle, when it reached 192. The sunspot number has not been that high since October 26, 1992, when it was 193.

Solar flux for this weekend, April 17-19 is predicted to be 100, 100 and 95. Through the end of the month look for solar flux to bounce around between 95 and 108, then rise above 110 after May 2, peaking around 125 about a week later. Geomagnetic indices may be unsettled today and also around April 24 and 25.

Higher solar activity has extended long distance 20 meter openings well into the evening. From the author's home in Seattle, New Zealand and Australia are strong on 20 meters even as late as midnight. Look for openings on higher frequencies as well, although on 10 and 12 meters the openings tend to be over north- south paths.

Next week this bulletin will be written by KH6BZF while the author is on Maui. Listen for us at KH6X until April 25.

Sunspot Numbers for April 9 through 15 were 192, 145, 132, 111, 82, 83 and 79 with a mean of 117.7. 10.7 cm flux was 139.7, 129.7, 128.3, 117, 114.8, 111.9 and 112.7, with a mean of 122, and estimated planetary A indices were 9, 11, 12, 9, 5, 8, and 4, with a mean of 8.3.

Here are some path projections to Hawaii from the continental United States;

From the west coast try 80 meters from 0400-1430z, 40 from 0230-1630z, 30 from 0100-1030z and 1230-1800z, 20 from 1630-0800z, 17 from 1830-0500z, 15 on some days from 1900-0300z and on rare days 10 may be open from 2000-0000z.

From the midwest try 80 from 0430-1300z, 40 from 0330-1400z, 30 from 0230-1500z, 20 from 1400-1445z and 1600-0800z with better conditions later in the period, 17 from 1600-0630z, 15 from 1730-0400z and 10 on some days from 1900-0300z.

From the east coast try 80 from 0430-1100z, 40 from 0400-1200z, 30 from 0230-0730z and 0930-1300z, 20 around 1400z, 1600-1730z and 2300-0600z. Check 17 from 1630-0400z and 15 from 1900-2330z.

>Can anyone here advise us? Will there be a problem for us if we mount
>this rather large antenna on a 1.5" mast and no thrust bearing?

All depends upon how high above the tower the antenna(s) will be mounted,
what the winds are projected to be and what the mast is made of. I have a
feeling a 1.5" diameter mast made of 0.250" wall chrome moly steel would be
fine, but possibly overkill if the antenna(s) are only going to be a foot
or so above the tower.

Let us know how high up the mast the antenna(s) will go and what velocity
winds you must build to, and then the required strength of the mast can be
calculated.

We have an engineering job opening in our development group here in Dallas, Texas.

We are part of the TIRIS organization, a division within Texas Instruments which develops and markets RF identification systems.

Our particular group develops product for the ARC segment (Automatic Recognition of Consumers). One important target for our products is the oil industry. You might have seen the Mobil Speedpass application, where one gets automatically recognized by the gas dispenser when fueling one's car.

The little electronic RF devices that Mobil issues are developed by us, we call them "transponders". They can either be on your keyring or be mounted in your car.

The devices work through an RF link, and also contain the necessary smartness by means of embedded software.

The associated reader equipment that goes into the gas dispenser is also developed in our group.

The person we are looking for has experience in receiving and transmitting techniques, modulation techniques, antenna theory, and some experience with digital electronics and embedded software.

I believe excellent engineering talent to be present within the world of radio hams. Therefore, if there is anybody that feels he or she fits the above profile, and holds an electrical engineering degree, please send us your resume.

Please send it to:

L.J. d'Hont Mgr development engineering TIRIS ARC segment

Is this the right group to post to for soliciting information on how to get started in ham radio--if not, which is?

My 13-year-old son would like to get started in the hobby and we purchased the next-to-most recent edition of "Now You're Talking!" about a year ago to study up for the license exam, but the electronics covered in the book seems pretty daunting despite the author's insistence that even 8-year-old kids can easily pass the test and that ANYBODY can be a ham. I don't have any electronics background and bogged down in the book, so wasn't of much help to my son. Is all that depth really necessary to take and pass the test? What parts are best to focus on and what best to skim or leave alone?

Sorry if I've posted to the wrong group, but would appreciate any info you can provide.

771. (fwd) Trojan program warning

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-17 00:00:00 UTC
From: Jr2301@cris.com
Message-ID: <6h856s$cn4@examiner.concentric.net>
Source record: 173878
Cross-posted to: rec.radio.amateur.misc,neworleans.general

WARNING: HTML trojans can damage your machine

A new class of trojan program has begun to appear in both email and in usenet news groups. It relies upon the fact that many people use a usenet browser such as Netscape or Internet Explorer, and that both of these browsers will allow programs embedded in the HTML (so-called applets or active-X controls) to execute without any warning to the browser user. It also relies upon known security holes in the major browsers to attempt further damage.

The problem began to surface when both email and usenet text was created in the format Netscape calls "rich text" (HTML). Someone discovered that HTML could be made to harbor trojan programs and actions, and began to post such messages to usenet, as well as sending them via email.

Usenet is just now being hit by these HTML messages - messages which may alter certain critical files of Microsoft Windows users (config.sys and autoexec.bat), so that when the victim next reboots the computer, severe damage may be done. Those not using Windows or MS-DOS probably have less to worry about, since it appears that the worst which can happen is that the browser will "crash" (exit unexpectedly).

The best defense against HTML trojans is to avoid using a browser to either handle your email or to read usenet newsgroups. If your software doesn't support HTML, then embedded programs or arcane tag lines will have no effect on it. If you're already using something like Free Agent for news groups and Eudora for mail, you can safely ignore this warning.

In the interest of notifying as many people as quickly as possible, please email this warning to your regular correspondents.

Thank you.

See the lastest issue of Newsline for how the taxi drivers have been removed from 10 Meters in NY City. See previous posts about operating on the "channelized" frequencies, which occur every 10 KHz beginning at 28.005 (i.e., 28015, 28025 etc).

Now that the bands are open again, those who have been illegally using what they thought were "dead" frequencies will realize that the "channels" belong to someone else. We know for a fact that the pirates hate QRM from Cw and RTTY/Packet.

Source record: 173883

[Please forgive me if this appears several times... news server errors!]

Gordon West Radio School Presents:
T W O Special Classes!

No-Code Technician Amateur Radio
Licensing Class For Mariners
Friday June 5th, Saturday June 6th and Sunday June 7th 1998
At the lovely Del Rey Yacht Club, Palawan Way, Marina Del Rey, CA.

And

General 13-wpm Morse Code
And Theory Review Class
Saturday June 6th and Sunday June 7th 1998
At the lovely Del Rey Yacht Club, Palawan Way, Marina Del Rey, CA.

No-Code Technician Class for Mariners -- Class Instructor: Gordon West,
=================================== WB6NOA
This special class is designed specifically with mariners in mind. Learn how Ham Radio can make your next cruise even more fun! Stay in touch with fellow hams as you sail down to Baja, use ham radio phone patches to keep family and friends advised of your position. This fun and entertaining two-and-a-half day class starts on Friday afternoon and covers everything you need to get your Federal Communications Commission No-Code Technician license. Take the two multiple-choice exams right there in class and get your callsign two or three days later! Students who pre-register will receive the Gordon West "No-Code Technician Plus" textbook, theory cassettes, and a special pre-study package. The class fee includes nineteen hours of tuition, beverages, lunch on both days, a barbecue on Saturday night, and a special Saturday night after-class workshop detailing marine installation and use of ham radio onboard yachts and powerboats.

General 13-wpm Morse Code
and Theory Review Class -- Class Instructor: Julian Frost, N3JF
========================
This class is for mariners that want to upgrade to the General Class license, but like many people, find the 13wpm Morse Code requirement their biggest stumbling block! Make 1998 your year to upgrade. Don't let the Code hold you back any longer, the Worldwide HF bands are waiting for you. In fun, stress-free way, your instructor will take you from a shaky 5-7-wpm all the way up to 13-wpm, or higher, in preparation for your exam on Sunday afternoon! Techniques in passing the CW exam will be taught, and there will be multiple demonstrations showing just how easy it is for YOU to pass the 13-wpm, or even the 20-wpm code exam! Theory review sessions

are held throughout the two days to help make passing the written exam even easier. Students that pre-register will receive the Gordon West "General Class" textbook, Gordo's exclusive CW tapes, and a special pre-study package. The class fee includes sixteen hours of tuition, beverages and lunch on both days and a barbecue on Saturday evening. General Class students join Gordo and his No-Code Technician class for an operating session and workshop dedicated to installing, using and maintaining ham radio equipment aboard yachts and powerboats.

--==--

For full details on either of the classes described above, please call Gordon West at (714) 549-5000 between 10am and 4pm, Monday through Friday.

ALABAMA TORNADOES BRING OUT THE BEST IN HAMS

What's being described as the worst weather of its type in many years brought out the best in Alabama's ham radio community this past week. The evening of April 8, 1998, became one for the record books as tornadoes touched down in central Alabama leaving death and destruction in their wake. Upwards of three dozen people died, and many were left homeless. "To say the least, it was a long night," said Alabama Section Manager Scott Johnson, N4YYQ, of Vincent. "The hams here did a great job!"

As the severe weather approached, dozens of hams spent hours on weather-spotting nets assisting the National Weather Service in tracking the storms and relaying reports of damage, hail, injuries and relief operations. David Black, KB4KCH, president of the Alabama Emergency Response Team (ALERT) and an ARRL PIO says hams were on the air well ahead of the actual tornadoes. As the "long night" wore on, mobile and stationary spotters on the West Alabama Emergency Net and the Alabama Emergency Net on HF checked in with weather spots, damage assessments, and injury reports. As needed,

hams were assigned to assist with Red Cross shelters opened to house tornado victims. A second repeater was activated to handle damage reports. Lisa Wallace, KF4C, in Tuscaloosa, served as liaison on the unofficial net and assisted in passing traffic from the West Alabama Emergency Net to the Birmingham NWS office and the Tuscaloosa Red Cross.

ALERT members activated the well-equipped ham station at the National Weather Service office in Birmingham. As former Alabama SM and current ARRL Alabama District 8 DEC Tom Moore, KL7Q, explains, the station has VHF/UHF capability to access remote bases for linking to various repeaters--and local SKYWARN nets--in the region. Those attempting to track the weather on the ground gathered information not only via ham radio nets but via an Internet/packet radio gateway developed by hams in Alabama. The digital Internet/packet gateway has an extensive wide-area dedicated RF node network and provides hard copy of severe weather bulletins, exchange of storm and damage reports, and keyboard-to-keyboard contact with supporting SKYWARN groups. Johnson said the keyboard-to-keyboard aspect worked especially well and helped to relieve voice traffic congestion. "The more I watched this system, the more impressed I became with it," he said. He's hoping other Alabama counties can be convinced to adopt a similar approach.

Weather service meteorologist Brian Peters, WD4EPR, said hams often were first with important storm-related information. "They were absolutely great," he said. "We couldn't have done it without them." Peters classified the storm as an F5--the most violent category. Winds were estimated in excess of 200 miles per hour. SKYWARN groups elsewhere in Alabama--including the capital city of Montgomery and in Northern Alabama--also were active as the severe weather ripped the state.

TV meteorologist James Spann, WO4W, had words of praise for his fellow hams. "I thought the watch and warning process was just flawless," he said. Peters, Spann and others agreed that spreading the word quickly on the approaching danger saved many lives, and hams deserve at least part of the credit.

Black says that, at one point, 14 Alabama counties were under tornado warnings at the same time. Tornadoes touched down in the Edgewater community west of Birmingham, damaging homes and other structures. More than 30 people died in Jefferson County alone, and the funnel cloud even threatened downtown Birmingham at one point. A tornado also caused heavy damage in western Tuscaloosa and St Clair counties, where others also lost their lives. Johnson said St Clair County ARES/RACES members assisted emergency management personnel and "probably did 90% of the damage assessment" in the county. Johnson says Mark Oglesby, KF4NLZ, left his home during the storm on a damage assessment foray only to return and find his own home gone in the tornado's wake.

As the extent of the damage became clear, hams in Birmingham were called upon to provide communication backup at Red Cross shelters set up for storm victims. More than a dozen shelters remained open a week later. Johnson says members of the HEART Net were very active in western Jefferson County providing shelter communication and other help as needed. Fortunately,

Birmingham's repeaters remained on the air and got heavy emergency use. Hams also helped provide communication between responding agencies and volunteers searching for victims and assessing the damage from the violent weather.

Robert "RB" West, W4BAT, who lives near Montgomery and away from the disaster area, lent a hand to the Salvation Army in the storms' wake. "They are swamped with work in Birmingham," he said, "so, I gave a little help here at the Montgomery center." West said he worried about the Montgomery area as the storms approached, and he tuned to a local weather spotters' net. "I had no idea what was going on 100 miles north," he said. In the stricken zones, the Salvation Army has set up feeding centers and has been relying on hams for some logistical support.

Black passed along tales of personal heroism on the part of some amateurs. Some examples: Janice Rock, KF4PVR, Ricky Rock, KF4RRS, and Joel Booth, KF4PWA--all ALERT members and all Emergency Medical Technicians--responded and helped carry a man with a head injury nearly a quarter mile through a thicket of fallen trees to an ambulance. Lacking a stretcher, they used a door they found to carry the victim. After hours on the SKYWARN nets, Bill Heaton, KE4FBH, went around delivering water and food to victims who had not eaten all day. Walter Cooney, KF4AAG, was stationed at the Birmingham-Jefferson County EMA headquarters and became the point man for a heavy load of damage reports passed via 2 meters. Many other hams assumed less epic roles and just pitched in as needed with the work at hand.

Disaster officials called the destruction some of the worst they'd ever seen. Vice President Al Gore and President Clinton also have visited the disaster scene. Hams are expected to remain available to help as the long recovery process continues in Alabama.--thanks to David Black, KB4KCH, Tom Moore, KL7Q, Scott Johnson, N4YYQ, and others

REPORT: NYC TAXIS ABANDONING 10 METERS

Under heavy pressure from authorities and from increased Amateur Radio activity, taxicab operators in The Big Apple reportedly are moving off 10 meters in droves, says Gerry Smith, W6TER, of New York. Smith heads an ad hoc committee that's been working for more than a year in the Hudson Division to clean up the problem. "Sure, there is a straggler or two, but for the most part, the band is clean," Smith announced recently in a report published in The Hudson Loop newsletter distributed to ARRL Hudson Division hams. Smith says that he was able to work Argentina recently on 28.045 MHz, one of the frequencies most often used by the cabbies.

ARRL Hudson Division Director Frank Fallon, N2FF, says Smith contacted him in early 1997 about starting up the ad hoc group to attack the problem. "I was honestly not too hopeful that we would be able to solve a problem that was almost ten years old," Fallon conceded. "Now, I'm no longer skeptical of what can be accomplished."

Smith credited a crackdown by the New York City Taxi and Limousine Commission (TLC) and the FCC for the exodus and called it "the largest successful enforcement action ever." During mandatory quarterly inspections,

the FCC paid a visit and warned drivers with illegal radios that future violations could result in hefty fines. For its part, the TLC mailed an industry notice to taxi owners, fleet shops and repair stations warning the cabbies of possible enforcement action. To help the process, the ad hoc committee purchased frequency counters for the TLC to use in its regular inspections and during airport raids and street inspections and is providing training in their use. The problem is potentially huge. There are some 44,000 New York City cabbies and more than 12,000 cabs. Drivers supply their own radios. Some 1500 or more illegal radios were believed to be in operation.

At its January meeting, the ARRL Board of Directors applauded actions by the FCC and the TLC to crack down on illegal use of the 10-meter band by taxi drivers. The Board urged confiscation of equipment and fines to drivers who fail to comply, as well as removal of illegal transmitters from all cabs.

Smith praised the "tremendous cooperation" between the TLC and the ad hoc committee, which also includes Fallon, RF engineer Marvin Bronstein, K2VHW, and attorney Arnold Katz, W2QK. A ham since 1954, Smith is a telecommunications consultant.

"The days of no fines are over with," he said, citing a pledge by the TLC to enforce its ban on illegal radios by imposing fines of up to $300. Smith encouraged hams to use 10 meters regularly as a way to deter interlopers and to report CB-type activity on the band.

Fallon hopes the success with the taxi radios indicates the "new mood" at FCC in enforcement. But he says hams will continue to monitor compliance. "The best part of the entire effort is to attend a New York City Amateur Radio club meeting and hear members say, 'Yea! The cabs are gone!' Fallon said.

VIRGINIA GOVERNOR SIGNS STATEWIDE HAM ANTENNA BILL

Hams in Virginia are celebrating that state's new Amateur Radio antenna bill that limits local regulation of Amateur Radio antennas. Gov Jim Gilmore signed the measure this week, and it becomes law on July 1.

Success followed an intense lobbying effort on the part of Virginia's Amateur Radio Community to get the bill approved by the General Assembly and signed by the governor. Bob Ham, KK4IY, of Vinton was the prime mover behind the bill. He, in turn, commended the bill's patron, state Sen John Edwards of Roanoke for "an outstanding job above and far beyond the call of duty." But victory did not come without some compromises.

For all areas of the state, the bill--Senate Bill 480, "Placement of Amateur Radio Antennas"--incorporates the essence of the limited federal pre-emption known as PRB-1 into the Commonwealth's statutes. It requires local ordinances involving the placement, screening, or height of antennas to impose the "minimum regulation necessary to accomplish the locality's legitimate purpose."

The original bill would have prohibited all localities from restricting antenna height to less than 200 feet above ground level "unless an Amateur Radio antenna clearly represents an unreasonable risk to human health or life." The version ultimately signed by the governor keeps the 200 feet regulatory minimum in localities having a population density of fewer than 120 persons per square mile according to the 1990 US Census, and provides for a 75 feet regulatory minimum height in more densely populated communities. Localities may not regulate the number of support structures in either case.

The new law would require "reasonable and customary engineering practices" be followed in erecting towers. Municipalities would still be able to set "reasonable requirements" on screening, setback, placement, and health and safety requirements.

The measure faced fierce opposition from the Virginia Municipal League and the Virginia Association of Counties. When it was introduced January 26 many observers gave the bill little chance of success. Now, its proponents are hoping it will serve as a model for other states.

"This legislation will be looked upon by the rest of the country, and--I am sure--will be emulated," said Virginia SEC and RACES Officer Frank Mackey, K4EC. Mackey acknowledged that the bill's success was built upon public service and emergency communication needs. "Only a small percentage of active hams are involved in this type of communications," Mackey said. "But without those hams justifying our cause there would be no rag chewing, DXing, contesting or the many other facets of our hobby."

Mackey urged his fellow amateurs to become involved in public service work.

Ham expressed "heartfelt thanks" to all who participated by sending e-mail, writing letters, making telephone calls, sending faxes, or appearing at the hearings. "Without the full support of the Virginia Amateur Radio community, this legislation would not have become law," he said. "We, as Virginia Amateurs, have a right to be proud of our efforts."

Ham has proposed forming The Virginia Association of Radio Amateurs as a non-profit entity to serve as a watchdog agency "to assure that the new law is implemented correctly and to come to the aid of Virginia Amateurs who might experience difficulties with a locality in the future."

For more information, see http://rbnet.com/~hamcotec/sb480.html.

HAM RADIO BUMPED FROM CIRCUS TRAIN

A Wisconsin ham radio tradition of more than 30 years has come to an end. Ham radio has been bumped from the annual run of the Great Circus Train. The train runs each summer between Baraboo--where the Ringling Brothers Circus got its start in 1884--and Milwaukee, the site of the annual Great Circus Parade (see "Public Service," QST, Dec 1995, page 90). ARES members rode the rails to help handle communication along the route and, once in Milwaukee, at the show grounds and for the parade itself.

In a letter to Bob Goldstein, K9KJT, of the Milwaukee's ARES group, the train's sponsors, the Circus World Museum, cited "severe space limitations" on the coaches for their decision to drop ham radio in favor of an offer of free commercial digital and analog service from PrimeCo. "We are attempting to eliminate as much clutter from the train coaches as possible this year and open up more space for our passengers," the museum's letter said.

Ham radio first came aboard the circus train in 1965 when ARES member Don Evenson, K9JYX, set up a VHF station that relayed to an HF mobile station chasing the train. In 1994, onboard HF operation was added. Wisconsin ARRL PIC Jim Romelfanger, K9ZZ--an indefatigable circus train booster--reports that over the past two years, hams aboard the circus train worked an average of 225 stations during the run--and fielded some questions about the circus at the same time. He said that without ham radio, the circus events and the museum would lose a tremendous public relations benefit that cost nothing. Romelfanger says he met a lot of the state's shakers and movers over the years through his association with the train. One time, he said, Ted Mack (of radio's Amateur Hour fame), rode the train and was interviewed by Evenson.

This year, the national governor's conference is in Milwaukee in late July. The train runs the last Monday and Tuesday in July, and the parade is August 3, Romelfanger said.

Romelfanger said the museum's decision surprised and puzzled him, and he expressed disappointment that the circus train would not carry Amateur Radio this year, when Wisconsin marks its sesquicentennial. "It was a privilege to work for the museum, the train, and the parade," he said.

NASA HAM WINS COVETED "SILVER SNOOPY" AWARD

NASA has awarded Matthew Bordelon, KC5BTL, with its coveted Space Flight Awareness Award--also known as a Silver Snoopy--for his leadership and technical contributions. The award was presented recently at Johnson Space Center where Bordelon works. Bordelon, who's the principal investigator for the Space Amateur Radio EXperiment or SAREX, received the award from astronaut Don Thomas, KC5FVF. The award letter cited Bordelon's "distinguished project leadership and outstanding technical contributions to the highly critical space shuttle orbiter upgrade effort." It also mentioned his efforts in training and mission support for the SAREX program.

Bordelon said the award pin was flown on STS-63. The Space Flight Awareness Award is given to less than 1% of NASA's civil servant and contract workers. Recipients are nominated by NASA management.

Bordelon's wife, Joanna, KC5OCI, won her own Silver Snoopy several years ago for her work at Johnson Space Center. Bordelon, a collector of Snoopy memorabilia, said he's been trying to get his wife to let him display her Snoopy in his display case. "But she said I needed to get my own," he said.

SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity has remained fairly high over the past week. Average sunspot numbers were up

almost 30 points, and average solar flux was about that same, at 122. Average solar flux for the previous 90 days went up another two points from 102 to 104, and flux values were above these levels on every day, indicating a good upward trend.

April 9 saw a new high in sunspot numbers for the current cycle, when it reached 192. The sunspot number has not been that high since October 26, 1992 when it was 193.

Solar flux for this weekend, April 17-19 is predicted to be 100, 100 and 95. Through the end of the month look for solar flux to bounce around between 95 and 108, then rise above 110 after May 2, peaking around 125 about a week later. Geomagnetic indices may be unsettled April 17 and also around April 24 and 25.

Higher solar activity has extended long distance 20 meter openings well into the evening. From the author's home in Seattle, New Zealand and Australia are strong on 20 meters even as late as midnight. Look for openings on higher frequencies as well, although on 10 and 12 meters the openings tend to be over north-south paths.

Next week's bulletin will be provided by KH6BZF while the author is on Maui. Listen for us at KH6X until April 25.

Sunspot numbers for April 2 through 8 were 67, 74, 70, 82, 82, 120, and 131, with a mean of 89.4. The 10.7-cm flux was 103.4, 103.6, 110.2, 126.2, 133.4, 135.2, and 140.6, with a mean of 121.8. Estimated planetary A indices were 4, 6, 10, 4, 4, 8, and 8, with a mean of 6.3.

Sunspot numbers for April 9 through 15 were 192, 145, 132, 111, 82, 83, and 79, with a mean of 117.7. The 10.7-cm flux was 139.7, 129.7, 128.3, 117, 114.8, 111.9, and 112.7, with a mean of 122. Estimated planetary A indices were 9, 11, 12, 9, 5, 8, and 4, with a mean of 8.3.

IN BRIEF:

* This weekend on the radio: The DXYL-NAYL Contest (CW), the Holyland DX Contest, and the Michigan QSO Party are on tap for this weekend. Just ahead: The DXYL-NAYL Contest (SSB), the Florida QSO Party, the Helvetia Contest, the Nebraska QSO Party, the Ontario QSO Party, and the QRP to the Field event are scheduled for the weekend of April 25-26. On Tuesday, April 21, it's the ARRL VHF/UHF Spring Sprint, 222 MHz, 7 to 11 PM local time. See April QST, pages 102-103, for details.

* NC1L is new DXCC manager: The ARRL Membership Services Department has announced the appointment of Bill Moore, NC1L, as Century Clubs Branch Manager, effective April 20, 1998. Bill came to ARRL in 1992 from the Otis Elevator Division of United Technologies Corp and lives in Newington, Connecticut. In his position as DXCC Assistant, he has represented the DXCC program at gatherings around the US. He has been serving as the Century Clubs Supervisor since 1996. Bill began the hobby through short wave listening, and has been featured in The New York Times, The Hartford

Courant, and has been interviewed by National Public Radio. He also is a RTTY DXer. The Century Clubs Branch is responsible for administration of all Century Club Awards, including the VUCC and DXCC awards.

* Job opening at HQ: There's a job opening at ARRL Headquarters in Newington, Connecticut, for an Assistant Contest Manager to work with the Contest Manager in administering the ARRL Contest Program. Job-related qualifications include knowledge about, and interest in, the League's varied contest program. The candidate should be familiar with the ARRL DXCC List, ARRL sections and divisions, and current contesting issues. An Amateur Radio license, writing skills, PC familiarity, including DOS, Windows, e-mail, and database management skills are required. Accuracy is a must. Some travel and ability to speak in forums required. Beginning salary, $18,000 to 20,000, depending upon qualifications. Send resumes to Bill Kennamer, K5FUV, Membership Services, ARRL, 225 Main St. Newington CT 06111. No telephone calls, please. The ARRL is an Equal Opportunity Employer.

* International Marconi Day special event: The Marconi Radio Club will operate W1AA/IMD on April 25,1998, from 0000-002359 UTC. W1AA/IMD will represent the Marconi transatlantic station on Cape Cod, Massachusetts, where the first two-way radio transmission took place between the US and Europe in 1903. More than 40 Marconi Day special event stations throughout the world will be on the air the same weekend, representing early Marconi station locations. This event is sponsored by the Cornish RAC of UK. A certificate is available to stations working 15 of the special event stations. For a card from W1AA/IMD, QSL direct to W1AA or K1VV (include an SASE) or via the W1 QSL Bureau.

* New W5 and Alaska QSL bureaus: Effective immediately the addresses and managers for the ARRL W5 and Alaska Incoming QSL Bureaus have changed. The ARRL W5 QSL Bureau now is the Magnolia DX Association, PO Box 999, Wiggins, MS 39577-0999; manager, Floyd Gerald, N5FG, e-mail floydgee@datasync.com. The new Alaska QSL Bureau is at PO Box 520343, Big Lake, AK 99652; manager, Roger Hansen KL7HFQ; e-mail rkh@alaska.net. The ARRL thanks former managers Les Bannon, WF5E, and John Bierman, KL7GNP, for their years of service to the amateur community.--Martin Cook, N1FOC, ARRL QSL Service Manager

* New KH2 QSL bureau: The KH2 QSL bureau now is being run by the Mariana Islands DX Association. The new address is Mariana Islands DX Association, Box 445 Agana, Guam 96932. For more information, see http://www.guam.net/pub/midxa/.--Jim Kehler, KH2D

* Former Alpha/Power employees form new company: Two former Alpha/Power employees have started up their own ham radio servicing outfit. Alpha/Power's former president and chief technical officer Dave Wilson, G3SZA/AA0RS, and former service manager Brad Focken, K0HM, have opened Frontier Engineering. "With the cost of equipment rising steadily and the amount of time to use it declining, it makes economic sense to repair or modify a rig in order to extend its working life," Wilson says. He promises outstanding service and value. Contact Frontier Engineering at Box 837, Platteville, CO 80651; tel/fax 970-785-2897; e-mail frontier@lanminds.net.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Hi Folks!

Does anyone know of any confirmed shuttle rebroadcasts that are happening in the Dallas Fort Worth Area for this week's shuttle mission?

Thanks!
-Lb

Those 10m freqs down at the bottom of the band are CW not phone. So
if you hear someone talking they are illegal. Might be a great place
to put some 10m cw beacons. General class and higher only.

```
February 20, 1998
Dear President Stafford,
You have not responded to my letter of September 27, 1997 where I
questioned why I was removed a VE. I have not violated any provisions of
97.525 or any other aspect of F.C.C. regulations that govern this hobby.
Thus unless you restore my VE status FORTHWITH I shall send the following
letter to newspaper editors throughout the country (on a staggered basis).
This is a threat. I believe fully in what follows. The only reason I have
not written this letter before was I was not motivated to actually send it.
```

Dear Editor,
There was a time when amateur radio provided a public service in training operators for military service, technicians for industry, fostered international goodwill and carried emergency communications. This rarely is true any longer. The technology has long ago left hams by the roadside. Today amateur exams are so simple children who can barely read can pass the test. All questions AND the answers are published in multiple choice format. The examinee knows the actual questions and answers ahead of time. The average age of today's ham is well over 50 whereas when I was first licensed the average age was 27. Hams are still communicating at 1200 baud when internet users fly along at 40 times that speed. As far as international goodwill, most hams rarely ask a foreign station anything more than what his equipment is, they do not care about culture, lifestyle or anything that really matters. Hams usually want the "credit" for having talked to 100 or 200 or more foreign countries (did you know both Hawaii and Alaska are separate "ham" countries?). If you have a scanner listen to frequencies between 145 MHZ-148 MHZ and listen to the content of the conversation. These are valuable frequencies that other public service and commercial interests could use PRODUCTIVELY. Cell phones have replaced the need for most emergency ham communications in this country. Hams use many other frequencies for little more than a discussion of personal medical ailments. Hams are required to serve the public but in fact they are serving themselves almost all the time. Worse they cause interference to other services (like your TV) and they erect large towers and guess what, there is nothing you can do about it. The F.C.C. is too underfunded to respond to citizen interference complaints and the ham radio lobby (American Radio Relay League) has caused both state and federal governments to pass laws that prohibit towns from controlling these large antennas.
The frequencies that hams use are for the use of everyone not their personal fiefdom. It is time Congress conducted hearings and investigated whether ham radio has become the vast wasteland (a term that former F.C.C

commissioner Newton Minow popularized).

Join us in celebrating our 40th Anniversary of WAMRAC/WACRAL the
World Association of Christian Radio Amateurs & Listeners.

Location:
Newsome South Methodist Church, Berry Brow, Huddersfield, West
Yorkshire, England

Date:
5th, 6th and 8-10th May 1998

Proposed operating frequencies +/- QRM will be:

3.747 MHz 7.047 Mhz 14.333 Mhz 18.133 Mhz 21.350 Mhz (or above)
28.333 Mhz operation also intended on 2m. Times of operation subject to
propagation and operators.

Newsome South Methodist Church at Berry Brow in Huddersfield is to host
the fortieth anniversary celebrations of the foundation of the WORLD
ASSOCIATION OF CHRISTIAN RADIO AMATEURS and LISTENERS with a special
amateur radio station and a gathering of enthusiasts in May.

Using a unique radio callsign 'GB4OWR', specially uissued by the
authorities to the organisers of the event, Christian amateurs will
operate short wave transmitters from the church location on 5th and 6th
of May and over the weekend of 8th-10th May. They will be speaking to
fellow 'hams' around the world.

During the week of celebrations, WACRAL members supported by today's
local radio clubs from Denby Dale and Halifax, will be teaching pupils
of the Berry Brow Primary School all about the magic of radio and will
be showing the Church Youth Club how it all works.

Publicity for this most unusual event has already gone out in the
amateur radio magazines and stations around the world are eager to
contact GB4OWR during its short four day life and to obtain the unique
confirmation of contact card, known as a QSL card, for their personal
collections.

Forty years agom, the Rev. Arthur Shepherd of the then Methodist Salem
Church in Huddersfield, started a unique movement to encourage Christian
fellowship through the medium of amateur radio. The Rev. Shepherd was
himself a 'ham' with his personal callsign of G3NGF and spent much of
his spare time talking to other amateurs around the world. He was also
a founder member of the Huddersfield South Methodist Radio Club - G3LQK.

In 1957 the club was invited by the World Methodist Council to become the prototype for a possible development of Methodist amateur radio clubs around the world. The Council would sponsor the launch of a new Association of Methodist Hams and the Rev. Shepherd was invited to become the organiser.

The World Association of Methodist Radio Amateur Clubs proved to be an outstanding success. In 1978, the Association became the World Association of Christian Radio Amateurs and Listeners, bringing into membership amateurs from all denominations and to include short wave listeners as well as officially licenced amateurs.

Mr Harold Turner, G4YRH of Halifax and principal organiser of the celebrations, says "WACRAL now operates around the world and is actively engaged in pursuing that orginal idea of using radio to project 'Christian Friendship and Fellowship . . . Worldwide. Our members meet regularly over the air and, here in the UK, enjoy fellowship every Sunday morning before church over a nationwide link-up".

"We are currently engaged in a project to assist a remote school in Uganda to learn about radio communications and, eventually, to obtain a licence to operate a school station themselves. Senior members are engaged in councilling distressed radio amateurs who turn to us for help and are proving singularly successful in their professional lives with Christian broadcasting, the installation of solar powered radio links in Third World countries and the moral support of amateurs in the missionary field".

"WACRAL is looking to the future and is already engaged in activity on the World Wide Web, surely an amzing result of the far sighted ideas of the Council and the Rev. Arthur Shepherd".

I spoke with my congressman, Ed Pease, on the matter. It takes a written request for a congressional investigation, so I am writing the letter. Maybe if 20 to 50 hams in different states all wrote to their representatives, we might see some action.

One point. I have noticed that many regulatory agencies are not that much into enforcement, to include BATF (really). Enforcement does not get the funding that the rule writers get. This is a problem within the FAA, the IRS, EPA and so forth. There was a reason that the founders made seperation of powers. One was to avoid having those who write the laws from having the power to enforce them. The other was to make enforcing the principle job of the executive. Policy making is ever so much more sexy, an educated mans job. Enforcement is too working class.

We only need three enforcement agencies at the federal level: US Marshalls (with the FBI as the investigators), Secret Service for tax and financial services issues and DOD to take care of matters from borders out. Agencies that make regulations need not enforce them, not that they would even to that great of a job.

Let the US Marshalls/FBI enforce radio law. They have the technical skill, as good as the FCC ever was. And there is motivation to do it. You would be surprised how many hams would clean up their act once one guy had a FBI SWAT team in his front yard. And instead of FCC attorneys, let us use the federal courts. I do not know too many hams with deep enough pockets to take on the US Attorneys office.

Instead of complaining to the FCC, write your congressman, write the local US Attorney.

Look at Klingenfuss adverts. They (used to) sell a CD with
all the main grunts and whistles recorded for recognition
purposes.

Once you have familairised yourself with the main ones, get hold
of a good decoder program such as Hoka Code 3 or RadioRaft and
see how much of it you can decode.

But aside from Wake in that group, how many have available
mains power? As I attempted to make very clear, places with
available mains power are typically also places with available
vehicles. And if you're on some godforsaken rock, you're going
to have to deal with the lack of mains power by providing your
own. It seems to make sense to me that the power you provide
should be 12 VDC instead of 110 VAC that you then have to
lug along a power supply to convert to 12 VDC. Often, the
vehicle that transported you there can provide that power.
In other cases, there are available 12 VDC generating sets
from Miller and others which would serve admirably.

There may be good reasons to carry along AC power generators,
and power supplies to convert it to 12 VDC, but I'm trying to get
people to think outside the box a bit on this. And it is good preparation
for emergency operation too. Places you're likely to be when an
emergency occurs may not have 110 VAC generators to run your
mains power supply, but they are likely to have vehicles which can
supply you with copious amounts of 12 VDC.

A nice try at dodging the clear implications of the gun-death statistics,
but it won't cut it! Another interesting statistic about US is that this
country has the higest % of people in prison of any industrialized nation.
What we are seeing in the US presently, I believe, is the high-water mark
of the right-wing-led backlash against humane social policies. Things go
in cycles, and this is no exception. The gun-toters are getting hysterical
as public opinion begins to turn against them, just as it has already done
against smokers. Their hysteria makes them even more extreme--defending
their "right" to own everything up to and including assault weapons, and
ever sillier in their arguments, as in this case. It looks to me like our
nation, born on an ever-moving frontier where guns were truly needed, and
"an eye for an eye" made sense, is finally beginning to become civilized
enough to move away from those things. I think the tide is turnining due
to the same kind of bitter learning process that makes individuals

change--suffering due to ones mistakes! We've lost so many innocent people now to crazy folks who wouldn't have been 1/10 as effective at killing if they hadn't had easy access to guns!

I could hardly agree more. I quit trying to enjoy ham radio in 1987.
Between 1973, when I became a ham, and 1987, when I packed away my
equipment. I think I had maybe 5 interesting conversations on ham radio.
The absolute, unvarying banality of ham conversation on both the low bands
and two meters never ceased to amaze me. These were presumably intelligent
people! They couldn't successfully pursue such an advanced technological
hobby if they werent! Yet they were as incapable of speaking intelligently
with each other on topics other than their health or their rigs, or of
exercising even the minimum imagination necessary to make human contact
with foreigners, as if they were children--or CBers. It took me years to
understand that this limitation was really an integral part of the ham
experience (I'm a slow learner.) Once I did understand this, I switched to
computers and then the internet, where usenet makes possible occasional
thoughtful and interesting exchanges (in between the cancerously-spreading

sex ads).

Hi Thomas,

If you have a PC you might try the NuTest trainer program. A (Novice
only) demo is available for download from:

http://www.btinternet.com/~tony.lacy/

NuTest produces sample tests just like the real thing and answers *with
full explanations* are given for every single question. The full version
includes all classes from Novice to Extra and the new General test is
covered in version 1.50 which is available from the same site.

Hope this helps. Tony Lacy, G4AUD

Bob, a partial (but certainly not total) solution is to try and use the "channelized" freqs favored by CBers. Call CQ on freqs in 10kc increments beginning with 28.005, 28.015, 28.025 etc. Part of the reason that CBers use the lower end of 10 meters is that it is quieter than the sometimes-trashed 27 mhz band, so a little activity may discourage at least some of them.

As various FCC officals have said that they are not bothered by hams who transmit over obviously illegal stations, I will sometimes call CQ in CW over some echoey, roger-beeping out-of-band CBer. (The digital modes are even more effective.)

I've read that the FCC has asked the radio importers to not sell easily modifiable ham rigs, with a threat that they may be outlawed in the future. But evidently the request has not worked, as converted 10 meter rigs are being sold widely, both in the US and the rest of the world.

I suspect the next sunspot peak will have even more pirates on 10 meters: there have been hundreds of thousands (millions?) of inexpensive easy-to-mod 10 meter rigs sold worldwide, most of which are never used on 10 meters. Typically a simple mod will allow TX over the 26 to 30 mhz range; all of these rigs put out twice the power (or even more) of a US CB radio, and they do not have the strict FCC type-acceptance standards of US CB radios.

Starting with Clear-Channel's Ranger AR-series in the mid-80s, which was followed by several Uniden models, then the RCI 2900/2950/2970 etc., the Emperor series, etc., the Asian radio makers have unleashed a tremendous problem for the ham community. In the past year I've seen ads from Copper Electronics for a sadly laughable rig: a 10 meter AM-only rig with a built-in echo box! Certainly all of these will be modded for CB, and none will ever show up on 29mhz AM.

Yes, converted 40 channel CB rigs, the occasional "export" CB have also been used by the 28 mhz pirates, but I strongly suspect they've been mostly replaced by the modded 10 meter rigs, due to their lower prices and easier conversions.

I freely plead guilty to "freebanding" with a modded Uniden 10 meter rig before I got my ham ticket! The majority of freebanders are responsible operators. But the numbers are increasing of the dirtballs who are using the lower end of ten meters.

Another ten meter problem with no easy solution is splatter from 27 mhz users. I've noticed that local hams running close to 1500 watts on 10 meters from legal ham gear and amplifiers will cause far less interference than a 27 mhz station running a claimed few hundred watts from a dubiously modded rig and cheap bootleg amp.

Some horrible mods are done to 27 mhz rigs in the name of "increased talkpower". Typically audio limiters are removed, which give the radio an overmodulated, bassy sound which is liked by most CBers, BUT also causes much more splatter, and stronger harmonics & spurs. Most "techs" that do these mods don't use typical commercial radio test equipment like spectrum analyzers.

When such a modded rig is used with the typically overpowered amplified mic and a bootleg amplifier, the results can be incredibly dirty, sometimes even interfering with six meters. Here in Santa Barbara, one 27 mhz freebander used to splatter enough to ker-chunk a six meter repeater with a 52 mhz input.

I have no easy solutions to the 11 meter splatter problem.. on one fairly recent occasion I informed a local CBer that he was interfering with 10 meters, and he simply did not care. I gather the FCC used to do much more 11 meter field enforcement, but evidently they don't have the funding to do as much as they did.

Well, this is getting long (and whiny!), so I'll close here. 73 and C U on the lower end of ten meters, fighting the QRM. DE KM6JE/Leigh Marrin in Santa Barbara, Calif.

We have written a Toroid software package for use DC to 300 MHz. Many Years of research has gone into error corrections for the low perm cores , 200 & 360 degree coverage as well as SRF for series and shunt coils. Much of this has come about as a request from Micrometals. The pin point accuracy allows us to add a custom core feature for custom shaped cores, stacking cores side by side and machining custom phenolic cores from plastic, teflon, wood, ect...
Down load a demo or just view the software main screen at our web

The Radio Amateur is:
CONSIDERATE...never operates in such a way as to lessen the pleasure of other's. (unless of course it is a contest).

LOYAL...Offers loyalty, encouragement and support to other amateurs, local clubs, and the American Radio Relay League, through which Amateur Radio in the United States is represented nationally and internationally. (unless of course money is involved or in many cases little support shall be given if the ham is old (almost always the case) and the new ham is young).

PROGRESSIVE...with knowledge abreast of science, a well built and efficient station and operation above reproach. (unless of course you have any money the you become an "appliance operator").

*FRIENDLY...slow and patient operating when requested; friendly advice and counsel to the beginner; kindly assistance,cooperation and consideration for the interests of others. These are the hallmarks of the amateur spirit. (unless of course it is a flea market (every man for himself).

BALANCED...radio is an avocation, never interfering with duties owed to family,
job, school, or community. (this is rarely true. A good contester will leave the family on Christmas if there were a contest, a local kid, known as "The breather" sits by his "hamradio" day and night talking to anything that comes along except of course a girl. Finally the only thing most hams will leave their "ham radio" for is a cup of C O F F E E.

PATRIOTIC...station and skill always ready for service to country and community. (unless there is DX around or a contest, in such cases it is accepted to ignore any emergencies).

Please visit my World Wide Web Site, you have never seen a page like it.

Amateur Certificate Service

Radio Operator License Certificates

from

"The only place you can get them"

Amateur & Commercial Radio Operator License Certificates using classic
FCC
designs are available once again from Amateur Certificate Service!
These
designs haven't been available since the 1980's. The certificates are
FCC
approved and copyrighted to protect their integrity and uniqueness.
While the
original documents may have gone away, the demand hasn't. We're proud
to make
these certificates available again! Please read on...

Fast Facts

* Certificates available for ALL Amateur Classes

* General Radiotelephone Operator License Certificate

* Meticulously recreated using Classic FCC designs

* Amateur design is a part of Ham Radio's Heritage

* The original Ham design that commanded respect for decades

* Designs not available for over ten years

* Proudly display your achievements

* Easy to frame 8 x 10 size

* FCC Approved

* Printed on the same type of paper as the original documents

* Applicants checked against FCC database for authenticity

You've Earned It!

You've worked hard to get the license you hold. Your rewards are your operating
privileges and a perfectly unimpressive document from the FCC! Considering the
time and effort you've put into studying, testing, and passing the exams, you
deserve a lot more than a small, dull card.

Show your Pride!

Imagine how proud you'll be to know your name and call sign or license number
are on THE ONLY FCC-APPROVED CERTIFICATES AVAILABLE TO RADIO OPERATORS! And,
that the designs on the certificates use the actual borders, fonts, and
verbiage of the original licenses as issued by the FCC. Take a look at the
certificates below and just imagine...

So let's see 'em already!

Amateur Certificates...printed on high quality paper: $9.95

Amateur Extra Class Certificate
Amateur Advanced Class Certificate
Amateur General Class Certificate
Amateur Technician Plus Class Certificate
Amateur Technician Class Certificate
Amateur Novice Class Certificate

Commercial Certificate...printed on buff safety paper: $9.95

General Radiotelephone Operator License Certificate $12.95

Okay, I want one! Give me details!

The Frugal Operator

* Amateur Certificates: $9.95

* General Radiotelephone Operator License Certificate: $12.95

* First Class Postage paid

* Protective Packaging

I want it ALL!

* Mounted under crystal clear glass in a beautiful, solid oak frame

* Priority Mail Shipping (A large box)

* Protective Packaging (Eight square feet of bubble wrap to keep it in one
piece!)

* Add $10 for frame, shipping and handling

* Absolutely the BEST way to display these. Awesome effect. Very official
looking.

How can I get one of these?

Choose one of these easy ways to get your certificate on it's way to you:

1. Call 407-344-1620) and place your order. Easy!

2. Click here bwolford@magicnet.net, e-mail us your name and phone number,
and we'll call you back.

3. Print an order form on your printer and surface mail it back to us.

4. Send your name (as you want it to appear on your certificate), call sign,
type of certificate you want, current mailing address, and telephone number
with area code, along with a check, money order.

Amateur Certificate Service
3242 Fairfield Dr.
Kissimmee, Florida 34743

Orders verified by telephone when possible.

I agree with Bill ... SCO's approach is FAR to tolerant of such
behavior. Do it once - a big fine (and a 1 year license suspension
would be nice). Do it a second time and lose your license on a
permanent basis and do, say 2 years, of prison time minimum.

Bill is right ... these sociopaths know what they are doing. They
simply don't care about what is right or wrong and the rights of
others.

Hi Bob,

Welcome to the hobby. I remember running out to the local R.S. to buy myself a HTX-202 the day that I got my Tech Plus license. The radio has served me well ever since as an HT, in-car mobile (with magnet mount antenna), base radio (with power supply and j-pole), and packet radio.

73,

Warren

Yes. I'm sure that they could tell the difference, but in the stress of the
situation they fell back on their training. That's perfectly normal. And
their training was primarily to make the contact at all costs, even if that
means stepping on others who might have more important traffic. As
Dave Heil said in another meassge, a contester can't afford to wait if
he wants to win. That's deeply ingrained through years of training and
practice.

Message-ID: <1998041923583700.TAA14264@ladder01.news.aol.com>
Source record: 173782

That's going to depend on the mixer. IF the "phono" input is designed to accept the signal from a phono cartridge directly, then you have two things to deal with. One, obviously, is level. The other is equalization. Phono preamps boost not only the anemic level output of the phono cartridge to useable voltages, but they also shape the contour of the sound to compensate for the hot high end and weak low end of the cartridge's sound. For this kind of mixer, you would have to build a voltage divider with an RIAA network after it, to get usable sound from that input. From the sound of your request, this sounds like it may be the case. This is a tough one. And can be somewhat complex. The best solution, as I did with one of my stereo systems is to bypass the RIAA net work and then deal directly with the issue of levels.

If your mixer does not accept a phono cartridge directly, but rather accepts the output of a phono preamp, then all you need to worry about is levels. You need to know your impedance input for the mixer and the impedance output for your source and build a network of resistances that will allow the source to see its desired impedance, and the input to see its desired impedances. That means you need to provide more information than you have provided here, in order for us to help you.

Odds are pretty good, though that if you have a mixer that does not provide for RIAA correction, you can probably get away with using a 50kohm potentiometer, with ground returns commoned to the low side; the center (wiper) contact to the input of your mixer, and the high side of the pot to your line level source. It may not be elegant, but it will get you started. And in many, not all certainly, but many cases, you will not be able to tell the difference.

846. Re: 10 Meter -CB problem ??? What to do...

Cutie Boy (cute@radiotelephone.net.ham) wrote:
: so what ??
:
: the vast majority of people in the world are NOT interested in DXing
: on CB. Moreover on 10m on CB.
:
: what's your problem ?? if someone is a ham and purchases a ham gear,
: then it is not a problem to use 10m but otherwise not ??

"Cutie Boy", in your .sig you give two ham calls, VA2QRU & VE7JPN, which in the QRZ database, both come back to a Masataka Noda. So you evidently are a licensed ham, whom I assume has had at least some on-air experience, probably on VHF or UHF repeaters.

How would you feel if your favorite repeater had a decades-long problem of interference by unlicensed operators? You studied hard to get your license (perhaps with some langauge barrier problems) and spent several hundred dollars to get a decent FM rig. When you tried to use your hard-earned privileges & equipment, you would feel the same frustration I feel sometimes when trying to use the lower end of 10 meters.

Without widely followed band plans and gentlemen's agreements (like that of most 11 meter freebanders who will not go above 28.00 mhz) radio is not a useable medium of communication.

A few jerks have used high powered gear on 49mhz: how'd you feel about not being able to use your convienent cordless phone?

How'd you like to be in a plane/jet landing at night in a storm at a crowded airport, and the pilot is having trouble copying the control tower because of bleedover from CBers using dangerously splattering amps? (This has happened.)

Were you ever in an emergency situation, how'd you like to have the police or fire department or ambulance delayed, because some jerk is jamming the public safety channels with a modded VHF/UHF ham rig, or stolen police/fire rig? (This has happened.)

: your are a typical person who tries to kick the bees out... and
: helping destroying the ham radio.

By calling CQ over an illegal signal, I'm destroying ham radio??? I'd say you are doing more to destroy ham radio by ignoring interference problems with your "so what?" attitude.

: it's better to be active [freq]. if they just want to say CQ when
: no one listens (like nowadays... too busy with the internet etc.),
: just let them do so.

"No one listens"?? 10 meters is starting to have more DX stations as we get closer to the sunspot peak, and there ARE a lot of legal stations who are trying to work them, and are being interfered with by illegal operators.

"Just let them do so"?? If your favorite repeater was being trashed by unlicensed stations, I'm certain you would feel differently.

These girls are sick.
Having sex with a ham.

Burt

I agree! This is not the future of our hobby ... it is the future of our society! We are increasingly intolerant of those with whom we disagree. We cloak ourselves in some kind of moral superiority by pointing out why what the other says is so "incorrect" and intolerable that we are justified in silencing them. We behave like self righteous pedants when we are called to account for our self centered arrogance. I have regretfully come to a tentative conclusion that all of this culture war stuff will, sooner or later, be settled by violence. Look back at what the attitudes were in this country were just prior to our Civil War. Look a wee bit familiar? God save us from the true believers on either side!

Your wife did the same Burt, are you and her somehow the exception and it's
just the rest of us that have a problem?

Isn't your daughter also a ham, will you call her boyfriend sick for having sex
with her?

Just curious Burt, your comments always seem not include yourself and your
daughter, two more hams.

Tim

I have 8 GE MASTR Executive II Base Stations for sale. The combination number is: F156LFS56A they are currently on 140.xxx Mhz The dial shows 8 channel positions. However, only 4 are accessable. I'm not sure what the power output is but I was told it was 110 watts.
Units are in good condition. Photo E-Mailed on request. price is $ 50.00 each or best offer.
Thanks
Richard

From: "Dr. Gar Ko" <komudo@feist.com>
Message-ID: <6hejji$jn1$1@supernews.com>
Source record: 173790

Please find below the listing that you requested:

The following is a list of Electronic Equipment, some Reference Standards, and some Ham Gear that are FOR SALE. This equipment is being made available on a first come, first serve, basis.
All operation and service/maintenance manuals as well as historical data pertaining to their certification history and traceability will be provided on items where applicable. No warranties implied. Offers are being considered. Buyer is responsible for all packaging costs, handling and shipping
charges/expenses.

Contact: Dr. Gar Won Ko at (316) 651-5050 or komudo@feist.com

1.) Hewlett-Packard Model 10543-60010, Quartz Oscillator, 5 MHz, utilized in
many of the Atomic Resonators, e.g., 5062C, 5065, 5060A, and 5061A Cesium Beam/Rubidium Gas Frequency Standards. This metal can oscillator is brand new and in its original HP box.

Condition: Excellent (new in HP Box) Price: $ 850.00

2.) Smith-Florence (Honeywell) Model 951, S/N 150, Precision Potentiometric Micro-Voltmeter and Nullmeter.

Condition: Good Price: $ 250.00

3.) Fluke Model 873AB, S/N 351, AC/DC Differential Voltmeter/Nullmeter, 0 to 1100 Volts AC/DC, +/- 0.02% DC and +/- 0.2% AC.

Condition: Fair (needs repair) Price: $ 100.00

4.) Hewlett-Packard Model 415E, S/N 719-02825, SWR Meter with 60 dB attenuator. SWR and dB scales for use with square law detectors. 1 kHz input frequency.

Condition: Excellent Price: $ 400.00

5.) Tektronix Model 107, S/N 001824, Square-wave Generator and Risetime Source, 3 nS risetime, squarewave amplitude from 0.1 to 0.5 volts into 52
ohms. Frequency range from 0.4 to 1 MHz.

Condition: Good Price: $ 150.00

6.) Tektronix Model 105, S/N 2002, Square-wave Generator, Frequency range from 25 Hz to 1 MHz. Output amplitude from 0 to 100 Volts into 600 ohms with

less than 15 nS risetime.

Condition: Good Price: $ 125.00

7.) Tektronix Model 114, S/N 1751, Pulse Generator, 10 nS Rise/Fall time, 10 Volts output into 50 ohms. Variable pulse period from 100 nS to 10 mS, Duration, with + and - output polarities.

Condition: Good Price: $ 225.00

8.) Hewlett-Packard Model 412AR, S/N 3858, DC Vacuum Tube Voltmeter, built-in probes, manual, and rack mountable.

Condition: Fair Price: $ 60.00

9.) General Radio Model 1605-A, S/N 891, Impedance Comparator.

Condition: Fair Price: $ 50.00

10.) Tektronix Model 190B, Constant-Amplitude Signal Generator with signal/power attenuator.

Condition: Excellent Price: $ 125.00

11.) Eldorado Electronics Model 1607, Frequency Counter/Timer, 0 to 25 MHz in frequency counting mode, 0 to 2 MHz in period measurements (4 ranges),
1.0 uS to 9,999,999 uS in time interval measurements.

Condition: Good Price: $ 125.00

12.) Hewlett-Packard Model 5210A, S/N 1136A02048, Opt. 001, Frequency Meter.

Condition: Good Price: $ 150.00

13.) ARC (Aircraft Radio Corporation) Model H-16, S/N 430, Standard Course Checker, VOR Modulation, with Model P-11, S/N 606, Power Supply and interconnecting cables.

Condition: Good Price: $ 150.00

14.) Hewlett-Packard Model 7030AM, X,Y,T Plotter with time base.

Condition: Fair Price: $ 175.00

15.) EICO Model 235, VTVM, AC RMS and P-P Ranges, Resistance and + and - DC Volts including a 0.5 Volt DC F.S. range, probes and manual.

Condition: Good Price: $ 75.00

16.) Tektronix Model 7A13 Differential Comparator Plug-in for 7000-Series Display Mainframe. Mechanical Readout.

Condition: Excellent Price: $ 300.00

17.) Hewlett-Packard Model 400EL, S/N 536-04003, RMS AC Voltmeter, Analog (average responding) meter with 12 ranges from -60 dB to +50 dB or 0.001 to

300 Volts RMS, 10 Hz to 10 MHz.

Condition: Good Price: $ 250.00

18.) Systron-Donner DataPulse Model 101, Pulse Generator,

Condition: Good Price: $ 275.00

19.) Fairchild (Electro-Metrics) Model EMC-10 Electromagnetic Receiver and Interference Analyzer. 20 Hz to 50 kHz.

Condition: Good Price: $ 350.00

20.) Fairchild (Electro-Metrics) Model ESC-10A, Scan Control Head. Used with EMC-10 listed above.

Condition: Good Price: $ 100.00

21.) Tektronix Model 184, S/N 1490, Time Mark Generator for calibrating oscilloscopes. 21 Markers from 2 nS to 5 Seconds, 1 Volt output into 50 ohms, 7 triggering times selectable with its own output into 50 ohms. stable
oscillator as time base.

Condition: Good Price: $ 350.00

22.) Hewlett-Packard Model 8553B Spectrum Analyzer RF Section, 0 - 110 MHz.

Condition: Good Price: $ 450.00

23.) Hewlett-Packard Model 8556A Spectrum Analyzer LF Section. 0 to 30 kHz and 0 to 300 kHz.

Condition: Good Price: $ 550.00

24.) B & K Model 1076 Television Analyst (Flying Spot Scanner).

Condition: Good Price: $ 75.00

25.) Gould-Brush Model Mark 280, 2-channel strip chart recorder,

Condition: Fair Price: $ 150.00

27.) Hewlett-Packard Model 197A, Options 001 and 008, Display Camera Assembly.

Condition: Good Price: $ 175.00

28.) Hewlett-Packard Model 197B, Display Camera Assembly.

Condition: Good Price: $ 225.00

29.) Hewlett-Packard Model 2401A, S/N 444-01493, Integrating Digital Voltmeter, Rack mountable.

Condition: Good Price: $ 150.00

30.) Victoreen Guarded 10 MegOhm Standard Box, +/- 0.25%, with Triax Connector,

Condition: Excellent (newly constructed) Price: $ 150.00

31.) Hickok Model 14, 0 to 30, 0 to 300, and 0 to 3,000 milliAmpere DC meter, portable with handle.

Condition: Good Price: $ 50.00

34.) Hewlett-Packard Model 423B, S/N 1822A10811, Low-Barrier Schottky Crystal Detector, N-male connector on one end and female BNC on the other end. Frequency range = 0.01 to 12.4 GHz.

Condition: Excellent Price: $ 100.00

35.) Conrac Model RND-9, 9-inch High Resolution Monochrome Video Monitor, all solid state.

Condition: Good Price: $ 75.00

36.) RCA Model PXB-8, 8-inch High Resolution Monochrome Video Monitor, Vacuum Tube design.

Condition: Fair Price: $ 25.00

37.) Hewlett-Packard Model 3722A, S/N 943-00520, Noise Generator, providing two types of random noise outputs in binary signal and a continuous analog waveform of approximately gaussian amplitude distribution. Also, this unit generates pseudo-random versions of the binary and gaussian signals. This HP3722A is a low-frequency broadband noise generator designed primarily for the simulation of random disturbances, as in vibration analysis utilizing
a shaker table and accelerometers. A calibration signal source for a sound and vibration test bench would be another use and application. Brain wave noise-masking generation would be another use. Complete with manual and power cord.

Condition: Excellent Price: $ 950.00

38.) Micronta Model 22-211, Volt-Ohm Meter, 20,000 ohms-per-volt DC and 10,000 ohms-per-volt AC.

Condition: Excellent Price: $ 35.00

39.) Hewlett-Packard Model 350A, Decade Attenuator, 500 ohms impedance, 110 dB dynamic range, 5 watts.

Condition: Good Price: $ 50.00

40.) Sencore Model MU-150, Mutual Conductance/Transconductance Vacuum Tube Analyzer.

Condition: Good Price: $ 250.00

41.) Hewlett-Packard Model 1230A, Logic Trigger Kit, with manual and carrying case.

Condition: Excellent Price: $ 175.00

42.) AlphaLab TriField Meter, Three Ranges, High/Low Magnetic B-Field Ranges, Electric E-Field Range, and Radio/Microwave RF Energy Range, hand-held portable personal dosimeter. Covers Frequency Range from 50 Hz to 3,000 Hz and 50 MHz to 3 GHz.

Condition: Excellent (new) Price: $ 225.00

43.) Beckman Model 6148, EPUT (events per unit time)/Timer,

Condition: Fair Price: $ 25.00

44.) Shibaden Model VM-903U, 9-inch Monochrome Video Monitor,

Condition: Good Price: $ 75.00

45.) Cambridge "Simpli-Scribe" Portable EKG Machine, Model 0-209445, (Genuine Antique Electrocardiograph),

Condition: Good Price: $ 450.00

46.) Hewlett-Packard Model 5011T Logic Troubleshooting Kit, with Model 10529A Logic Comparator, and Self-Test Card, and 10 Reference IC Cards, carrying case and manual.

Condition: Excellent Price: $ 250.00

47.) Tektronix Model 7623A Display Storage Mainframe, with original manual.

Condition: Excellent Price: $ 650.00

48.) Tektronix Model 7B53A, Dual Time Base Plug-in, with original manual.

Condition: Excellent Price: $ 450.00

49.) Tektronix Model 7A26, (Quantity: 2), Dual Channel Vertical Amplifier Plug-in, 100 MHz bandwidth with original manual

Condition: Excellent Price: $ 350.00 each

50.) Tektronix Mobile "Scope" Cart with slanted top shelf and flat bottom shelf.

Condition: Good Price: $ 95.00

51.) Hewlett-Packard Model 3582A, FFT Spectrum Analyzer, ELF and Audio, 0.02 Hz to 25.5 kHz Frequency Range. Original manuals and application notes from HP. Dual channels, dual memory, averaging, various filtering.

Condition: Excellent Price: $ 3,200.00

52.) EMCO (Electro-Mechanics Corporation), Model 6640 (MFIM) Magnetic Field Intensity Meter with probe and calibrating Helmholtz Coil. Original manual, portable (field) operation.

Condition: Excellent Price: $ 12,500.00

53.) WaveTek Model 111, Function Generator with original manual

Condition: Good Price: $275.00

54.) Realistic 32-2031A amplified speaker, 12 VDC required or 4 "D size" batteries.....$ 18.00

55.) Collins 30 L-1 Linear Amplifier with manual (wired for 220 VAC) (Winged).....$ 650.00

56.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

57.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

Howdy! Just got an Alinco DJ-G5TH (was on sale), and so far I like it.
I would like to hear from other owners, likes and dislikes as well.
Also, does anybody know or have any mods for this baby? I've
checked everywhere on thr net and cannot find squat!
Is this not a popular radio? or have they not figured out the mods yet?
Please advise.
Thank you much!

Bruno, N1RXL

Looking for an inexpensive 2M handheld such as an old IC-2A or 2AT or
Tempo S1. Don't need anything fancy. Physical condition not important
as long as it works ok. Does NOT need to have a PL since it will be
used mainly for simplex operation. Please state what you have and your
asking price please when emailing. Thanks.

I am most concerned with jammers. If we could find them we should be
able to notify them one time to stop, if they continued fine them one
or two or three times ($500 the first time, $5,000 the second time,
and $50,000 the third time), then seize their license, then seize
their equipment, and finally seize the property upon which the offense
happens if they don't stop.

From: n7uqa@gte.net
Message-ID: <6hblc4mjm1@gte1.gte.net>
Source record: 173828

Copper Electronics and a few other companys are the the biggest contributor to the problem. I don't know any HAM that would buy their co called "10 Meter Radios". I put forth to Copper Electronics, why are you purposely marketing there radios at CB'ers? The answer is they're the only ones who buy them. Also, the warranty must be voided for them to use them. Thus returns are probally non-existant.....

860. Help - Realistic HTX-202

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-19 00:00:00 UTC
From: bstephens1@mindspring.com
Message-ID: <353955b0.966145@news.mindspring.com>
Source record: 173829

Helllo, I am a new ham and just upgraded to tech plus. This morning I bought a used HTX-202 from a local ham dealer. I was attempting to program in a non standard off set when the LED went blank.

Here is what I did: (ok till # 7)

1: pressed VF & tuned to the output I wanted to store (standard Memories)
2: pressed F and rotated TUNE until 2 showed in the display
3: pressed F + M-WR fot a couple seconds
4:: pressed MR & tuned to transmit
5: pressed F + M-SET (the display was supposed to show TF but it looked more like EF to me)
6: rotate tune to change the transmit freq.

so far so good - at this point I was listening to the inpute to the receiver

7: I then tried to change the sub aud tone. I was supposed to just press SC but instead I pressed F + SC. Then I released the F key and the LED srcreen went blank. I could still hear the inpute to the repeater. Then I turned the rig off & when I turned it back on , I was no longer receiving the inputed to the receiver. Finally I pushed clear & that had no effect.

Can any one please tell me how to remedy this mess ?
Thanks & 73, Bob KB1CIW

p.s. to save b.w. you could e-mail me thanks

Even more interesting - YOU can transmit wherever necessary, in an
emergency. It does not matter if you have a license for the frequencies.

When the tornados hit Atlanta the local cell system almost died due to
overload. The public police systems (911) almost collapsed too. They
are not trained to handle such communication overload.That is when the
local Amateur Radio Emergency System was activated to take over
emergency communications for the Red Cross and Fire Depts.

: !!!!!

Were they on the same frequency? Most likely, you just have a wide
passband receiver, and heard all of them.

: >contest?
:
: Based on Gary's description about the real emergency that just happened in
: Atlanta, I'd say, yes, that's EXACTLY the problem - they COULDN'T tell the
: difference.

I don't think that Gary's post implied that. They most probably could tell the difference - it is rather obvious. The problem was that they could not adapt to the completely different requirements for emergency operations.

I suspect the primary difference is: In a contest - you talk all you can. In an emergency - you only talk when you have to. It is hard for a lot of people to remain silent when they have a microphone in front of them.

Dick Harper (dharper@sprintmail.com) wrote:
:
: I'm trying to find the publication (I believe it was within the past 12
: months) where I read about the possibility a communications (HBO
: TV)satellite was possible killed by a meteorite. The article mentioned
: it was observed spinning with an observatory telescope. It mentioned
: how programs were moved to another satellite until another one could be
: brought into the damaged one's station (possibly G5).

Or space junk from launching all those satellites. It wouldn't take
much to tumble one of the birds.

: The article also mentioned how within the not too distant future the
: Earth will be passing through an asteroid belt that could damage many
: commercial satellites.

This is crap. If they claimed that, then it casts the accuracy of the
rest of the article in question.

: The same or another article was accompanied by a drawing of an early
: American setting with meteorites looking like fireworks in the sky.

They are called meteor storms. It happens when the Earth passes through
the path of a comet. Most of the meteors (not meteorites - those are the
ones that reach the ground) are a few millimeters to a few centimeters in
size - when they enter the atmosphere.

: Is this the right group to post to for soliciting information on how to
: get started in ham radio--if not, which is?
:
: My 13-year-old son would like to get started in the hobby and we
: purchased the next-to-most recent edition of "Now You're Talking!" about
: a year ago to study up for the license exam, but the electronics covered
: in the book seems pretty daunting despite the author's insistence that
: even 8-year-old kids can easily pass the test and that ANYBODY can be a
: ham. I don't have any electronics background and bogged down in the
: book, so wasn't of much help to my son. Is all that depth really
: necessary to take and pass the test? What parts are best to focus on
: and what best to skim or leave alone?

Go to Radio Shack, and purchase the Novice Study Guide. It will contain
all the questions that can be on the test, and the answers.

There is actually very little electronic knowledge needed to pass the
Novice exam - and it could probably be passed without any at all.

Have him learn the code, to at least 5 wpm at least. That will give
him HF (high frequency) privileges - so he will be able to communicate
around the world on any day of the year.

You might consider getting your license, as well. It is a good hobby
for father/son.

:
: I am most concerned with jammers. If we could find them we should be
: able to notify them one time to stop, if they continued fine them one
: or two or three times ($500 the first time, $5,000 the second time,
: and $50,000 the third time), then seize their license, then seize
: their equipment, and finally seize the property upon which the offense
: happens if they don't stop.

Why so liberal? Do they have to be trained like dogs undergoing
Pavlovian conditioning? They are not 3 year old children, even if
they act like them.

There are provisions for fines in the vicinity of $5000 for the first
offense. It should be used - along with confiscation of equipment.
A second instance should result in loss of license and prison time.

These are intentional acts of disruption - not accidental. The people
know bloody well that they are violating federal law and interfering
with the communications of others.

so what ??

the vast majority of people in the world are NOT interested in DXing
on CB. Moreover on 10m on CB.

what's your problem ?? if someone is a ham and purchases a ham gear,
then it is not a problem to use 10m but otherwise not ??

your are a typical person who tries to kick the bees out... and
helping destroying the ham radio.

it's better to be active [freq]. if they just want to say CQ when
no one listens (like nowadays... too busy with the internet etc.),
just let them do so.

876. Freeware Spectrum Analyzer Update

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-19 00:00:00 UTC
From: Richard Horne <rshorne@mnsinc.com>
Message-ID: <3539E7F6.54BC@mnsinc.com>
Source record: 173845
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.amateur.equipment

Spectrogram version 4.2 is a freeware dual channel audio spectrum analyzer for Windows 95 which can provide either a scrolling time-frequency display or a spectrum analyzer scope display in real time for any sound source connected to your sound card. Spectrogram allows unlimited recording and playback of sounds from the audio spectrum display and can provide very high resolution spectrum analysis of wave files with a wide choice of frequency bands and frequency resolution and either linear or logarithmic frequency scales. Spectrum data logging capability is also provided. Version 4.2 replaces 4.1.2 and adds useful new features including spectrum averaging for noise reduction and more flexible scanning and recording capabilities. Spectrogram is ideal for any purpose related to sound spectrum analysis including

Analysis and identification of biological sounds
Analysis and identification of human speech
Analysis of musical performances
Tuning of musical instruments
Evaluation and calibration of home audio systems
Ham Radio audio reception and tuning

Spectrogram 4.2 includes many features comparable to those of expensive commercial programs. If you need to be convinced, compare Spectrogram 4.2 to commercial audio programs described at the following locations.

http://home.t-online.de/home/raimund.specht/avisoft_.htm
http://www.telebyte.com/pioneer/index.html

Half of contesting is talking. The remaining half is listening (and interpreting). Contesting is about hearing correctly, interpreting correctly and moving on to the next QSO. It is also the logistics of knowing when to be on which band. Finally, most contesters are not contesters only.

Wow, imagine that the conversations of others bore you.

Something nobody could have ever imagine, eh?

I'm sure your thoughts, ideas, and words, even though interesting to you,
would probably bore a lot of people out of their skulls.

If enjoying all of the words of others were a requisite for a
ham license, few of us would qualify (myself included).

People are people, on- or off-air. 73 and go experiment.

** Replace "gateheap" with "g8eap" to reply**

BURY RADIO SOCIETY - LECTURE PROGRAMME 1998

The Bury Radio Society is pleased to announce its Lecture Programme for the remainder of 1998 as follows:-

21st April - "Packet Update - A User's Perspective" Keith G3RTU

12th May - "RSGB Update" Linda Jopson G6QA (Regional Representative

9th June - "The CIA and RFE/Radio Liberty" Gordon Adams G3LEQ

14th July - Pedestrian Excursion with Radios

11th August - Vehicle Outing with Radios

8th September - "Inter Club Quiz" (Details to be announced)

13th October - "Construction Competition" (Multi Section)

10th November - "Surplus Equipment Sale" (Biggest Ever!)

8th December - "Annual General Meeting"

The Lecture in April will commence at 8.30 pm, following the R.A.E. Class, but why not come along a little bit earlier and enjoy the Informal Gathering from about 7.45 pm.

The Lectures in May and June will commence at 8.00 pm.

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, near the Town Centre of Bury, where it has its own Rooms for Lectures and other Society Activities such as 'On Air' Nights etc. On Evenings when there is no Lecture there is an Informal Gathering from about 7.45 pm onwards so why not come along and meet the Members. Visitors and Prospective Members of all Ages will be most welcome.

The Mosses Centre is located near the Town Centre, adjacent to Angouleme Way and just a few minutes from Junction 2 of the M66 Motorway. There is a large Public Car Park next to the Centre and there is reasonable Access for the Disabled. The Entrance is on Edward Street, just off Cecil Street.

The Licenced Bar at the Centre is set in a comfortable Lounge Area and is open from 7.30 pm to 10.30 pm and has a wide range of Alcoholic and Soft Drinks at reasonable Prices.

73 de Keith G8EAP and G0WQD

Bury Radio Society, C/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB. Telephone 0161 761 2079 (Office Hours).

I've already proved you wrong. Maritime operators participated in
a worldwide "contest" every six hours of every day, trying to make it
through pile-ups in order to pass their time-sensitive WX. Yet, you
couldn't find better radiomen for handling distress situations.

Luckily, real life doesn't coincide with the fantasy world in which
you reside.

>to their representatives, we might see some action.

I am most concerned with jammers. If we could find them we should be able to notify them one time to stop, if they continued fine them one or two or three times ($500 the first time, $5,000 the second time, and $50,000 the third time), then seize their license, then seize their equipment, and finally seize the property upon which the offense happens if they don't stop.

I have an ICOM-2340H dual band mobile. I can not switch from the VHF VFO to the UHF VHO. All other functions of the radio seem to be working correctly.

I don't know if there is some way to 'lock' the UHF VFO in an inactive state.

If you have any ideas that can help me solve this problem, please reply.

I've got two of them if you want one I'll let it go cheap. This is a double conversion extra high impedance unit which will work with your Icom 706. It has all gasfet audio sections (that means great audio dude...) with RJ-11 jacks to connect directly to your phone line also a motorola jack if you want to use it with a cell phone. It has two audio transformers wound with platinum plated wire for extra efficiency.Additionally it has 12 state of the art PLL audio decoders, each on it's own circuit board for tone decoding. I'll throw in the VOTRAX speech synthisizer chip for another $45 this is the hottest synthisized speech available in an autopatch.

This is one of the finest autopatches available Masa, I'd like to get at least $1500 for it, a check is fine I have an acct in Windsor But you'll have to wait until it clears before I send the patch.

I have a Motorola SP50 UHF Radio used only 5 times in Brand Spankin' New Condition with antenna, full capacity Nicad pack & drop-in rapid charger. This is a two channel radio and will transmit from about 400mhz to 470' something mhz. The radio is about 1 year old if that and is a full powered radio with the option button programmed for low powered 1 watt setting when full power is not needed.

No reasonable offer will be refused.

I would be willing to trade it for a Yaesu FT50R, ICOM 706MarkII or any HF base radio that is is either last years model or current model.

Remove the 'X' from my EMAIL address to reply. Send all offers to me in email: xandrew@tropicom.net

So you think that radio operators can only be trained to operate under one set of circumstances? A contester who has trained himself to operate a certain way at contest time cannot have also trained himself to operate in a completely different mode under vastly different conditions? This goes back to your old saw of "Pavlovian" conditioning. That's fine for puppies, but contrary to your evident opinion, you aren't the only ham who doesn't possess a dog's intellect. Ask any public safety communicator how he shifts gears when the ship hits the sand.

We run a club station at Bombay India called JNA Wireless Association.
The association is named in the memory of OM Jamshed (VU2JNA)and we also
have the same call. This was because we inherited his estate.

Among the many equipments that we got we also have one SB 200 linear. We have
been trying to fix it ourselves and get it going. However our efforts are
hindered due to lack of users manual, service manual and circuits.

Would any one be kind enough to let us know where this could be got from.
If someone can photocopy them and send them to us we would be very highly
obliged. Expenses, if any, will be met by us.

To know more about us visit our web page at
http://members.tripod.com/~VU2JNA/index.html

Thanking the good soul in advance.

P. Venkatraman

> So you think that radio operators can only be trained to operate under one set of
>circumstances? A contester who has trained himself to operate a certain way at
>contest time cannot have also trained himself to operate in a completely different
>mode under vastly different conditions?

Richard has this one absolutely correct. I know many contesters who are excellent emergency operators (including emergency net control stations).

As I have been following this discussion of Contesters vs. Emergency Ops, I have been struck by the foolishness of the idea that people can only do one thing well. We all should know better. We train ourselves to do what is important to us and to accomplish what we enjoy. I've known bankers who are great golfers, and ministers who are cabinetmakers in their spare time -- and if they run into a problem, these latter don't preach at the wood or take a hammer to their members.

Even working on radio communications, we work in a "mindset" according to the kind of work we are doing. If you are rag-chewing (CW, SSB, RTTY, or whatever), it's a different mindset from contesting, which is still different from emergency operations.

Now this is not to say that every contester makes a good emergency operator -- nor does every ragchewer or PRS operator. It is not important what your preferred pleasure operation is, but what you have trained yourself for and prepared yourself to do.

Stereotyping and generalizations accomplish nothing.

The best emergency operators are those who have practiced and prepared to handle emergencies. Period.

I have got a Yaesu FT 757GX and all of a sudden yestaday about 7:00pm, I got a carrier throughout the mids, about 27.000 to 27.285. I was wondering if it is the radio or something else. The radio recieves fine everywhere else and if I take the aerial out of the back I don't seem to get the carrier. ANY suggestions?

Ok so are you saying there was this big fat carrier 285KHz wide or the carrier would appear randomly thoughoutthis part of the band?

> I was wondering if it
> is the radio or something else. The radio recieves fine everywhere else and
> if I take the aerial out of the back I don't seem to get the carrier. ANY

Well your in the middle of the CB band so I would expect to hear LOTS of carriers there, is this a surprize to you?I can't help but feel this is a troll but OK I'll bite.... If your removing the antenna and the signal goes away then it's NOT a birdy or something internal.

> and two meters never ceased to amaze me.

Did it ever occur to you that it takes two to make a conversation? It's not new to bow out whenever the content of the exchange gets so light as to be uninteresting, but I've frequently been surprised what a seemingly unrelated comment by me brought out of the other party and what interesting "threads" it sometimes led to. Frequently other hams join in who were just monitoring when the interesting stuff started, and who now find reason to join in.the proceedings. This frequently leads to extensive roundtables that go on for some time, interesting all the way, on most any subject you could think of. Don't blame ham radio for your own shortcomings as a conversationalist.

One of the most interesting on-the-air groups I get into is headed up by a fellow who is a wheelchair quadriplegic, has very limited usage of his upper extrremities and still builds amplifiers and tuners. He is also an accomplished machinist and gunsmith, and is knowledgable in a wide variety of subjects. Throw a comment out for this crew and it draws anything but dull responses....There are a lot more people like that on tha air than you evidently could imagine.

Hi Leigh,
Masa, better known as Cutie Boy and a couple of other names is a young man going to school in Canada from his home country Japan. Cutie Boy's goal in life is to troll the amateur news groups with totally off the wall statements that make no sense. Other than being an internet troll he does not seem to have any real activity in ham radio. Most of the folks on the news group have learned to just ignore his outburst.

Cutie Boy's time here is probably limited. If his grades in school are anything like his participation here, he will soon flunk out and be on his way back to Japan.

Aw, c'mon now - he's good for a chuckle at any rate.
He's one of THE BEST Trollers I've ever seen! Gets a
big rise outa the unsuspecting (and/or the self-righteous)
EVERY time. You gotta - grudgingly, I admit - respect
that kind of talent, even if it is saturated with p**s 'n vinegar....

I worked with a guy like that once; watching his effect
on those around him was a real hoot, too. Harmless sort,
as long as you didn't take what he said personally or let
it get under your skin. If you did, you'd just painted a
big target on your forhead as far as he was concerned.

Hi Randy,I don't think anyone who has read "poor Burt" on these news groups
has any doubts why he was removed.

> This type of press we could do without.

True, but it doesn't take very long to figure out that Burt is a few bits
short of a byte. Not too many will take him seriously.

Has anyone seen his "letter to the editor" actually published in any paper?

> Actually, I think this guy's name
> is, really, Wayne Green!

Naw, At least NSD has been known to say positive things about ham radio.
Burt has never been known to do such a thing.

> One last remark, children have ALWAYS been able to pass a ham test (it's
> just that they were better educated back in the old days).

We see lots of young people taking the ham exam and passing all the time. I
do, however, worry about Burt's students, if he poisons them on amateur radio
the same way he tries with the news groups.

Hi Scott,
Good Show!!!
I had the opportunity to work a station on 15 meter cw this last weekend that was only running one watt. He was in Maryland and I was in Colorado. When I found he was running QRP I cranked my power down to 5 watts and we were able to talk for about 45 minutes. Kinda fun...

ExpressPCB makes prototyping electronics with printed
circuit boards easy and inexpensive.

Here's how it works:
1) Downloads their PC board layout package for Win95.
It is available at no cost.

2) With this very easy to use software, design
two layer boards with plated-through holes.

3) Order your custom boards using the "Order Boards
Via The Internet" command directly from the layout
program.

4) Within 2 or 3 business days, an overnight courier
delivers your boards, often for under $100 plus
shipping.

For all the details, check out: http://www.expresspcb.com

CARL DOMANICO <cmd-dell@worldnet.att.net>

For Sale: Crown International PSA-2X Professional Self-Analyzing
Stereo/Mono Power Amplifier....

If your looking for a Super-Powerfull,Highly Reliable, Amplifier you
came to the right place.....It's a Cream Puff, Mint Condition, I'm the
Original Owner. It's very Powerful, Rated at: 275 Watts RMS Per Channel
into 8 Ohms...460 Watts RMS Per Channel into 4 Ohms...700 Watts RMS Per
Channel into 2 Ohms. These are very conservative Ratings...more like
335 at 8 Ohms.... 640 at 4 ohms 840 at 2 Ohms...Per Channelï¿½.
It Weighs 57lbs/W Rack Handles. Dimensions: Height 7" Width 19" Depth 17
1/2"..*..I also have the Optional Balanced Input Module Installed, So in
the event you want to feed the Amplifier with a Balanced Input Signal,
from a Preamp or Mixer you can. Or your can just feed it with a Standard
Un-Balanced Signal Bypassing the Module...It also has a Built in Cooling
Fan, complete with Filter to keep Dust out...But it runs Cool Even at
Power Levels that would fill an Auditorium....If your familiar with
Crown International, Their Name has been Synonymous with High Quality,
and High Reliability, for the Past 50 Years....I really would rather
keep it than sell it...but since I've moved back into a smaller
apartment...I have no room...I've already sold all my other Stereo Gear.
The Amplifier is Ideal for a Super Home System, Commercial Sound System,
such as a School or Church, Perfect for those who Perform Disc Jockey
workï¿½
*Balanced Input Module has complete Adjustments for Compression ,
High and Low Filters, AGC Automatic Gain Control Threshold Adjustment,
Test Tone Signal Generator 50Hz to 20KHz. Extremely useful for System
Troubleshooting..
I paid $2300 New...I'm asking $1200 Firm, in Original Box, You Pay
Shipping

I've had considerable higher amount of interesting QSO's, several QSO's
with LA7MI or LA6VM on 80/40m ssb lasted over 5 hours, I might even had
many interesting 2m FM QSO's, even some on repeaters!!!

>Conversation is a two-way street. If you have nothing to offer, chances are
>you will get nothing in return. It's that simple.

it is perhaps not too difficult to find somebody to make an interesting
conversation with, the problem is all the breakers (read: Intruders),
interrupting an interesting conversation without having anything to add
to the discussion. I usually overhear intruders, but unfortunately the
opposite stns does not.

Still remember a G-stn I worked on 144320 some 20 years ago, we had so
much to talk about, but so many angry stns waiting to work to LA

Hi,

During the first week of May I'm going to take part in a trans-Sierra backcountry ski trip. I'll be skiing through Yosemite and, for safety, I've been thinking about taking along my 2 meter handheld.

The route we'll be following goes from Mt Lyell on the east side to Merced peak, to the Clark range and drops down into Yosemite valley.

Can anyone tell me about repeaters in this general area?

Thanks,

-Scott

I am dying to get on CW and so I need a keyer! I'd love to chat with
you if you have some old straight keys or old paddles laying around that
are just collecting dust. If so, I will take one or two of them off
your hands. Help out someone new to HF keep CW alive!!!

Thanks.

Your 2340H is broken! Best thing to do is send it to Icom, and we'll fix
that particular problem at no charge.

Hosfelt Electronics, latest catalog, page 11. Rare 14 volt grain of wheat bulbs are 35 centts apiece in quantity of one. Part no. 25-220. They will probably make better price in more quantity. Phone no. is 1-800-524-6464. You can get a free catalog (186pages), and their prices are very good. Their service is fast and accurate. In addition to the Rare 14v grain of wheats, they have a bazillion lamps and almost all general electronics parts as well as some surplus items. I dont think they have a web page yet, but I have bought from them for over 10 years with no dissapointments.
Regards, Don

Brad, digital modes ARE legal beneath 28.100. Several years ago I had several AMTOR QSOs around 28.085 or thereabouts. My suggestions also apply to Novices and Tech+ licenses, as illegal ops are also found above 28.100.

Only for US stations --- we can do whatever we like - there is only
the 'gentlemen's' agreement here for most countries and 10m skip
is occurring daily now. The CBers will be everyones problem soon :-(

If you are in the Houston area, near the NASA mission control, then tune your scanner to 171.15 mhz. That is the live audio feed for air to ground radio traffic for the shuttle missions.

: regulations regulations as a "responsible" person.

Doug, were we discussing dangerously reckless, speeding drivers, we would be wasting our time by dwelling on the majority of speeders who only go a couple of MPH above the speed limit and otherwise drive responsibly.

While "freebanding" is illegal, the section of 27.405 to 27.700 has almost no legal users worldwide, and the majority of its illegal users have reasonably clean signals and don't interfere with 10 meters. Compared to the unlicensed jerks who trash the lower end of 10 meters, the majority of freebanders are "responsible."

Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12
volters. These are 14 volters and put out just about the same amount
of light on 12 volts as the 12 volters do. They should last virtually
forever once replaced in your rig. This voltage is quite hard to find.
Mostly one ends up using 12 volters only to have to replace them again
in a short time. These bulbs draw apprx. 60ma. at 12 volts. I found
these at Dayton one year and bought up all the guy had. Lot of 12
grain of wheat bulbs $10 postage paid to you.
Email me if interested. Also have some of these up on eBay if you want
to play the auction bidding game.

Hi, folks,

After spending about three months trying to figure out the best way to operate HF from my car, I've sort of come to the conclusion that a 10 meter mobile rig would be the way to go. Can anyone recommend one?

It really ought to be under $200 if at all possible. Anything more than that, and there's the problem of, gee, I might as well save up for a multiband rig. I don't have a lot of $$$ & I just want something workable (primarily for SSB and CW) that will get me on the air from my car.

Or should I hold my horses and wait for the hamfest about 3 weeks from now??

I would wait fot the fest but also keep your eye out on the swap group
for a 2510 or a 2600. I have a 2510 in the truck that I paid 150$ For
about four years ago and it performs very well. I had a 2600 which I
got for the same price but foolishly I sold it. They are not world
class rigs but they are OK for the money and they do everything on
TEN.
Actually the 2510 won't do repeater splits but it will do simplex FM.
If your lucky you might find one for 150$ or even less, but with the
bands getting good I think the price will be going closer to 200$

You could also do what I did for my backup rig, and that is pick up a
Cobra 148GTL and modify it for Ten. They actually work pretty well if
you find one of the older vintage ones

Good luck and good DX!

Rich

Source record: 173801

Jason

I have the same problem and managed to reduce the interferance, but never stopped it.
I aslo tried different monitors, earthing straps etc etc - no difference..

The best solution was to open the monitor casing, and very "carefully", glue aluminium wrapping to the inside of the case.

This stopped about 70% of the interference.

I then got some steel shelving, and with the help of a few guys, a press and a hammer - we made a cavity box for the screen to slide/fit into- and about another 20% was reduced.

It was then fine.

All the best.

Hams...

After a long absence from HF I have fired up the HW-101 (I said LONG absence 8^)) and the thing cracked and zapped and spit at me. But I fixed it with some black vinyl tape. (ain't tubes wonderful?)

Having the rig operational again I am thinking of putting up a 80-10 meter vertical.

What's out there, what works, what would you do over again if you had the chance?

Discussion, please.

Scott,
Try 147.000+ (107.2) and 147.030+ (107.2). These are listed as linked
repeaters in Yosemite. I have not used them myself so cannot offer
any clues as to their coverage. Have a nice trip!

950. USA Reciprocal licenses

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-21 00:00:00 UTC
From: geertj@solair1.inter.NL.net
Message-ID: <6hhtpd$rrc@solair1.inter.NL.net>
Source record: 173662

An advance warning for those who are trying to get an American Reciprocal license: I sent in a FCC form 610A, dated February 1996 (exp 8/31/98), which was bounced.

I should have used a FCC form 610A, dated September 1997 (exp 8/31/98).

If you apply for a reciprocal license, please be sure to use the later form to avoid delay.

The changes are minimal:
- Reference is made to the RF safety thing
- Reference is made to the fact that one should not be a USA citizen
- The guy to complain to about paperwork reduction now also has an email address..

In any case, if you apply for one, you might as well do it right.

Geert Jan

951. Re: Q: How Did You Get Into HAM RADIO?

Newsgroup: rec.radio.amateur.misc

From: ritzman@aol.com
Message-ID: <1998042111184801.HAA10070@ladder03.news.aol.com>
Source record: 173663

Well, I can thank my Grandfather. When I was all of 10 years old he took me to the then brand new Worcester Science Center in Worcester, MA. It just so happened that a couple of young men were operating a special events station that day and I was amazed by their ability to talk to people all over the world. I must have spent the whole day standing there listening!

Now, my Grandfather wasn't a ham, but he did know that the radio had a real impact on his grandson. Several days later I was presented with a practice oscillator that he had built out of a slab of wood, some spring steel, a wooden drawer knob, an old brass dog tag and door buzzer. Along with the oscillator came several ARRL publications that my Grandfather had managed to track down. It was like Christmas in the middle of the summer! I knew at that point that someday I'd be a ham.

I'm glad to say that that dream didn't die and, while 26 years have passed, I finally found the time to earn my license this past winter. I am presently a no-code Tech, have passed my General written, am working on my code to hit the 13 WPM mark and studying for the Advanced written. At age 36, it feels great to have finally achieved a childhood dream and I know that somewhere my Grandfather is smiling!

That's my story, thanks for reading!

Why is this drivel posted to the "boatanchors" discussion group?
What does it have to do with discussing classic tube-type gear?
Shouldn't this kind of thing be posted to the "policies" group?

There are none. Whats more Yosemite is in a caldera so TV,FM
radio,cellular don't work. However there is a park ranger who
monitors 2m (146.52 I believe?) from his tower. Interesting
fellow. Believe the work crews use business band radios around 160m.

Source record: 173673

Greetings- I just got my General license and want to start working 20 meters.

Money is a little tight right now, and I don't have access to the roof of my apartment building to mount a permanent antenna. I was wondering if anyone has any experience with the MFJ-9420 "travel" radio.

From what I've figured, the rig, power supply, and a dipole antenna should run about $350 plus shipping. I've heard good and bad things about MFJ products.

Any opinions or suggestions are appreciated.
Thanks!

> Who and/or What got you into Ham Radio?

I wish I knew. If it's a disease, I may have been born with it. I've been fascinated by radios ever since I can remember (age 4 or 5). I remember building crystal radios at age 7, and playing with electronics kits at age 8 or 9.

I finally found out about ham radio at age 11. It was a book I brought home from the library. Don't ask me exactly how I knew there was one to be found there. It may have been that my mother mentioned once that my Uncle was a ham. Of course, he lived on the other side of the continent, I'd met him only once before, and radio was never mentioned. I passed the Novice exam just after my 12th birthday. The rest is history.

Moral: Keep donating those books to libraries. I was already very interested in the whole idea of radio. If there's one thing that hooked me in to the hobby, it was the ham radio book on the shelf there. It found me, and I haven't been the same since.

As you probably already know, a vertical (short) is a severe compromise on 80
especially. Id recommend saving ur money and just hang a wire for that band.
As for the others I hightly recommend GAP verticals. Good mechanically and
an excellent performer.

Sorry I can't. BR68 specifically excludes messages 'for the benefit of
any religious organisation'. Or are you suggesting that there is no
benefit in what you do, in which case why waste power and bandwidth?

Don't get me wrong, I've nothing against Christianity, or any other
religion. It's just that Amateur Radio is about radio, not personal
faiths and credos.

Try 147.00+. (I don't know if it needs a tone)

I don't know if it is still there. I think it is/was located at one of the park entrances so I can't tell you if it covers the entire park. I also can't tell if its "open" or "closed". Used to be open.

When I lived in the central valley I recall a local repeater in the Modesto area being linked to it. I know that I was able to talk regularly with people in the Yosemite Valley over that system.

As for Yosemite's geology - I am not geologist but Yosemite is not a caldera. Its a valley that cut by a glacier, not a volcano.

Gee, Mike ... if you really feel that way why don't you do
yourself (and all of us) a favor and give it up?

You would save yourself the boredom of dabbling in something
that's "passe'" and you'd stop being such a negative influence
on the future of the service.

Arrrrgh. I was commenting on Yellowstone, not Yosemite.
Yosemite isn't a caldera, and may have a repeater.

Hi. I am looking forward to hearing the opinions (suggestions) (or if you have one, let me know) about next following items for the autopatch. I would like to set up the patch by connecting to the mobile or handheld rig (is it possible ?)

CS-1688, DTMF REMOTE CONTROL BOARD
CS-700, SIMPLEX SAMPLING AUTOPATCH
CS-800, LOW COST FULL-DUPX PATCH/CONTOLR
CS-900, VOX OPERATED SIMPLEX PATCH
RAMSEY SDP-600

If you have one and don't want it or have any suggestions, please let me know.

>Someplace to tap for PL detection

If you research the 500 alittle more you'll find out that it can easily be made into a repeater with out all of what your looking for. I have the RCA 1000 which is the same as the 500 but mine is on 440 and not VHF-Lo band. But there the same type of radio. All the repeater mods are done on the IF board and to get the Controller to work it just takes a simple little Circuit to trigger the Controller from the Squelch line. If you want more info write back or call me voice between 8am and 1pm EST and I'll help you out with it

You know, considering conditions, we might be able to at least parallel internet email via TCP/IP with Tropo, meteor scatter, and the like, especially with the new 5GHz Part 15 Subpart E Lan allocation for local distribution before rollover hits us.

The only problem is that I don't think there are any commercial manufacturers of this equipment yet, and I believe home brewing is not authorized. This could get interesting with Part 97 stations as the backbone and Part 15 devices as the local networks. A lot of the backbone is already in place as NTS-packet.

FCC Report and Order Docket 96-102 Adopted 9 January 1997: I have a copy for those who are interested, or you can find it yourself at http://www.fcc.gov/

Hello,
Can anyone out their give me some info on the heath SB220 linear amp?
Mine puts out 800 watts cw pos and 900 watts ssb pos..I'm told this is on the low side for this amp.Supposed to go as much as 1200-1300 watts on ssb peak. My plate voltage is at 2100v.in cw & 2750v. ssb no load.Full load it goes down to 1750v.cw & 2300v. on ssb..Is this normal? Would new capactor bank mods from Harbach give me more plate voltage and more power out. Or could my finals be soft? I just bought the amp at a ham fest and really don't know too much about it,but I'm under the impression it should put out over 1KW in the ssb pos.
Any repleys, comments, or suggestions will be greatley appreciated....TNX

982. Re: Locating QRN Source

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-21 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6hih0j$ocb@news.Hawaii.Edu>
Source record: 173694

John makes a useful arguement for treacking down QRN which is the result of arcing and corona discharge on 4, 12 or higher KV distribution lines. However, not all QRN has significant energy at high HF thru VHF/UHF frequencies to take advantage of the directional characteristics of a small yagi antenna for example. The classic cause for lower frequency QRN is rectification of power line induced currents in corroded utility pole hardware and ground connections. Signal strength measurements with a variable "deafness" receiver is the only useful method for finding lower frequency QRN. A small AM portable works wonders because you can identify a noise source by listening for its characteristic sound. Using a Grunding Yacht Boy 400 multiband portable I went hunting for a 6 Mc noise source by driving a cross hatch pattern for several city blocks. I eventually developed a circle pattern at the edge of noise fade out. I drove to the center of the circle and ended up in a trailer park where I located a pole that was emitting the same characteristic noise but barely readable at 28 Mc. A couple of days later the utility company trouble shooter showed up with his 318 Mc direction finding receiver and clould hear nothing at my location. I took him to the faulty pole and then he could hear the same offending noise. When he went to adjacent poles he heard noises but not the one I was compalining about. The only way he could have found the noise with his UHF receiver would have been by trancendental meditation and enough luck to win the lottery. Chasing QRN, like pounding brass, is still an art and practice yields more results than theorey.

I'd say you were unlucky, I've been licensed since 1965, built many pieces of
equipment, synthesized multiband transceivers, test equipment like a spectrum
analyser module and the like. I never owned a commercial rig until 1992 when I
saw them at a price Stateside that was hard to pass up on.
Over the years I've had skeds with many parts of the world, seen a few of those
I worked when on my travels. I even had a good long chat with the skipper of a
Varig 737 flying between the Capital of Amazonas State and Recife. It depends on
what interests you have, I enjoy chats on general things, airplanes (sexiest
things on 3 legs), radio and lots more, I shun the computer chats except with
people I know, the ones who will go on about how wonderful Windoze XX is and
it's outstanding packet software, poor blokes salivating over Microdro$$
operating systems.
Anyway, got a CT-2 to fix and get packet back on the air and if it stops
raining, get drilling a wall to pur that 2m antenna up above the roof.
One day soon I hope we can make the jump to 56K packet and shift some real
stuff, we keep moving an inch at a time modifying ex-PMR stuff, but think we
need to build from scratch.
Regards

Let me second this. I ran into Fisher on a local 10 meter repeater one night and then we QSY'd to 75m where our QSO was quite cordial, I thought. But then he turned around, in usual Fisher fashion, and posted his sour grapes to this newsgroup complaining that I did not debate him. What for? If he wanted a debate why didn't he start one? Instead he put the monkey on my back and blamed me. Well he can have the monkey and I blame him for his own dissatisfaction with amateur radio....and life in general. Fisher is a very unhappy person and will probably live out his days and die that way....in typical Fisher fashion.

In the January and April, 1998, issues of QRP Quarterly, there is about a cumulative 8-page description of solar events and exactly how and why they affect HF propagation on Earth.

Besides the fact that the each journal is a solid 80+ pages thick and costs under four bucks, it's a good read.

And yes, I'm a QRP ARCI member but have no stake in the magazine other than I occasionally end up mentioned in it, and read it with great interest.

P.S. Looking for homebrewing? QRP may be the place...

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <620>

.....
>From the Editor's Desk:
It was great to see so many people who attended the memorial service for Stan Harter on Thursday in Sacramento. Most had a Stan or a Delmar story to tell, and
I'm sure that Stan was there in spirit. His condolence page will remain open through May 1st; if you haven't done so as yet, drop by his Memorial Page at http://www.garlic.com/oes/harter.htm
and leave your thoughts. We printed over 130 responses from the page, and Cary Mangum presented them to Stan's family on Thursday. We'd like to express our sincere appreciation to South Valley Internet (www.garlic.com), GuestWorld.com and Alan Chase from APCO, who quickly came forward and helped make Stan's Memorial pages come together so quickly.

Ken Bourne has been selected as Incident Commander for the Emergency Response Institute - South. Ken is in the process of selecting his ERI Staff, and we're looking forward to bringing the ERI learning experience to Southern California.

Bill Pennington, WA6SLA has posted suggested operating and training manuals for
REACT organizations on our ACS Home Page. Come by and take a look!

>From the mailbag:

Paul Chistensen replies to one of Stan Harter's last emails, regarding the use of 'rubber ducky' handheld antenns in our last issue of the newsletter -ED.

From: paul.christensen@nellcorpb.com
Re: ACS Newsletter 4/11/98

I have abandoned the rubber duckie almost immediately upon using the first one I owned. I have found a bandaid that reduces the telescoping antenna destruction rate and adds considerable convenience.

Install two right angle connectors between the antenna and the HT. This allows the antenna to move in multiple directions rather than snapping immediately. (In use it is a bit floppy once the connectors ahve a bit of wear)

The telescoping antenna I use for everyday is a 1/4 wave that is about as long as my HT is tall. The right angle connectors allow me to fold
the antenna around so it is alongside the radio when not being used. The connectors allow the antenna to be offset slightly when in use with the radio in a pocket or on a belt so as to gain a slight distance from my body which greatly increase ERP AND reception. I then carry a 5/8 telescoping antenna for even better handheld performance. For those REALLY tough jobs I take a pack of alkaline batteries (AA for compact, D for longer term) and an outboard Power Amp that will operate in the range of 6 to 18 volts.

The D cell pack I use is a modified MagLite flashlight that has an RCA type phono jack to allow access to its battery stack. (I have 4,5,and 6 cell versions of this.) [fairly simple to make... uses a double-sided PBC with a hole drilled thru the PCB to connect the two sides; the outter most 1/8 of copper is removed to avoid shorting to the case; this is added inside the battery compartment with the phono jack attached to it and anchored to the flashlight's case; a hole is drilled into the case to allow access to the jack]

....

April 7, 1998 - The Federal Emergency Management Agency (FEMA) announced today it has published a new version of Answers To Questions About The National Flood Insurance Program.

The 63-page booklet, last updated in 1987, is designed to provide the public with basic information about flood insurance and how to obtain it.

The document addresses all facets of the National Flood Insurance Program (NFIP) administered by the Federal Insurance Administration, a part of FEMA. It includes sections on flood insurance requirements for property owners, details of coverage, procedures for filing claims, and community requirements involving floodplain management, flood hazard assessments and mapping.

The new version reflects changes mandated by the National Flood Insurance Reform Act of 1994, which increased coverage ceilings, extended the waiting period before new policies become effective and strengthened lender compliance rules, among other provisions.

"Demand for this document has grown enormously since its introduction 25 years ago," FEMA Director James Lee Witt said. "Although it was primarily intended for individual property owners, it has become the primary reference for everyone involved with flood insurance, including insurance companies and agents, lenders, regulators, realtors and other government agencies."

In addition to answering the most frequently asked questions about flood insurance, the booklet lists other NFIP publications; addresses and telephone numbers of NFIP and FEMA regional offices and state coordinating agencies; and sources of technical data and materials including floodplain management studies, flood insurance rate maps, and flood mitigation guidelines for individuals and communities.

Copies of Answers To Questions About The National Flood Insurance Program (FIA-2/November 1997, Inventory # 084) may be ordered by contacting the FEMA Distribution Facility, 8231 Stayton Drive, Jessup, Md. 20794; Telephone: 1-800-480-2520; Fax: (301) 497-6378. The full text is also available on FEMA's Internet site http://www.fema.gov/nfip/

Under the NFIP, federally backed flood insurance is available in communities that adopt and enforce floodplain management regulations to reduce future flood damage. Currently there are more than 3.9 million flood insurance policies in force in over 18,700 participating communities nationwide, representing nearly $443 billion worth of coverage.

Current Events:

Partners in Response '98 would like to extend an invitation to all list members visit our web site or come to visit us in person on Friday, May 8th and Saturday, May 9th in London Ontario. In its fifth year, Partners marks Canada's National Emergency Preparedness Week.

This unique Emergency Response and Preparedness Exposition brings together over 75 agencies from Police, Fire, Ambulance, Industry, Search & Rescue, Military, Amateur Radio, and other organizations involved with assisting the Community in times of emergency. Over 100,000 visitors are expecting to take in the outside vehicle displays, demonstrations, and inside booths at the Westmount Shopping Centre.

It is an excellent opportunity for people in the Region to see the wide range of response organizations that operate in this area. It has also provided excellent opportunities for the participating organizations to get to know each other better in a non-emergent situation.
Some of them even utilize the demonstrations as training opportunities.

Check our web page at: http://www.execulink.com/partners for more information. Please be sure to sign our guestbook when you visit...

Organizations interested in providing related vehicles or displays can

What's New on the Web:

If you're interested in building your own, real-time weather map, go
to the University of Illinois Urbana-Champaign's webpage at
http://covis1.atmos.uiuc.edu/covis/visualizer/

The university has created a "map maker" online (called the "Weather
Visualizer") that allows you to build regional weather maps with an
enormously broad range of potential weather features, e.g. fronts,
wind directions, dew points, temperatures, isotherm, isobars, etc,
etc, etc.

Just point and click what you want on your map and the "Weather
Visualizer" builds your map in a few seconds (depending on the speed
of your connection). If you're using a 28.8 or slower modem, it may
take a bit longer than that.

This week's EMCOMM Bulletin:

EMC128 A Tsunami True Event 1/2 For release 4/21/98

---- Dedicated to the life and work of Stanly Harter who
passed beyond the veil April 2, l998 in Sacramento,CA
This is from his life while at Hawaii ----

"It was around 7 a.m. in Hawaii on a Saturday morning when the
telephone call jingled me awake. The call was from Clifford
Almeida at Hawaiian Airlines. He said a tsunami warning had been
issued for all Hawaiian Islands, because of a massive submarine
earthquake offshore Alaska.

Cliff and I were members of the Hawaii Wing Civil Air Patrol (CAP) communications section. All of the populated islands are equipped with outdoor civil defense warning sirens. The county policy is to sound the sirens two hours before the estimated time of arrival of the series of waves.

Cliff suggested I use the CAP radio to call the Hanalei Squadron on Kauai as they meet at the community center on Saturday mornings. He said that Captain Per Kai Davis and his CAP Squadron cadets were probably aware of the warning, but it would be a good idea to double check.

I turned on my HF radio and began calling the Hanalei Squadron. I called time after time without reply. That was a good sign, I thought. It meant that they had all safely fled the valley. Hanalei Bay was the site of the movie "South Pacific." History had proven that the bay acts as a funnel for tsunamis, forcing the ocean to rise up to a hundred feet as it bores into the valley. Hanalei had a population of 300 and cultivated their taro patches.

I was about to make my final radio call when I heard a carrier come on the air and a girl's voice reply to me. The cadet's voice reflected her unfamiliarity and apprehension with the two-way radio. When she said "Over", the carrier remained on the air. "Oh, God," I thought, "she doesn't know that the transmit toggle switch isn't spring loaded. She would have to remember that. "Please remember!" I mentally pleaded. While the transmitter was on she could receive nothing. Finally, after what seemed an eternity, the carrier dropped.

"Be sure and turn off the transmitter after you say 'over'," I said. "I am calling because there is a tsunami warning. The ETA on Kauai is less than an hour. Are you aware of this? Has the civil defense siren sounded? Over."

"No. No." she repeated softly, "We don't know anything about that. Captain Davis is not here right now, and the other cadets are outside practicing for the drill team competition. Over."

997. Solar Disturbance Early Warning System Software Announcement

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-22 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <6hldkp$l7q1@mars.online.uleth.ca>
Source record: 173612
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.swap,sci.astro

We are pleased to announce the release of Version 1.5 of SWARM (Solar Warning And Realtime Monitor) Early Warning System. SWARM is the worlds leading and most sophisticated PC-based software package for monitoring solar activity, space weather conditions, and geophysical activity in REAL-TIME. It will fetch, archive and display a prodigious amount of information as well as sound a large number of user-selectable audible warnings for such things as the impending Earth-bound impacts of solar coronal mass ejection disturbances, energetic proton bombardments, increased geomagnetic and auroral activity, and MUCH more.

This software is being used in research activities as well as in amateur applications. Anyone requiring advanced and realtime notification and display of solar and space weather activity will benefit highly.

If you are new to SWARM, please check our web-page for a comprehensive list of features at:

http://solar.uleth.ca/solar/www/swarm.html.

I got into it from being an SWL for a number of years.

I started to get kinda bored with all of the propaganda stations on
the broadcast bands, and migrated towards the "utility" bands, which
led to learning CW, which eventually led to getting my license!

Message-ID: <6hlfrr$k9r@news.cc.oberlin.edu>
Source record: 173614

After some initial difficulties getting the right person at the
FCC via their web site I finally got a reply from Mr. Richard D. Lee,
Chief of the Compliance and Information Bureau, about the current
enforcement policy of the FCC with regard to rules violations on
the Amateur bands. Mr. Lee said that he is frustrated and
disappointed about the lack of enforcement on the part of both the
FCC CIB and the ARRL Enforcement Task Force. Mr. Lee said that he
hopes to increase enforcement efforts in the months ahead.
Think we'll see more FCC vans and more issuing of pink slips?
Pity the FCC agent who must knock on the doors and confiscate equipment
belonging to dangerous and unstable people...I hope they have plenty
of backup with them if and when they do. --Bill KB8USZ

I have had excellent results with the Butternut Vertical. I chose it after discovering that the best signals from vertical antennas were from stations running the Butternutt.

They send you a slick way to make three radials out of 300 ohm ribbon line, plus one for 80 meters.

My Butternutt was outperformed slightly on 80 meters by my G5RV, and on 10 meters by the Antron 99. However, if you can have only one antenna, the Butternut is an excellent choice.

That's because you failed to ask the right questions - you failed to show the other operators you were interested in conversing with them. Did you ask about their military experience? Did you ask if they had any patents? Their profession? What books they'd recently read? Their thoughts regarding solar or steam power? Chess? Did you try to learn *anything* from and/or about the other fellows? Once you find the what the other person is interested in, you'll gain quite a bit of knowledge in an area that you possibly knew nothing about prior to the QSO.

Look for a speciality net to check into, such as the old Astro-Net which used to be on 3885 kc - amateur astronomers in their backyards all peering at the same celestial body through their telescopes (with a name like Moonman, you would have fit right in...). Call CQ CHESS to hook up with another chess player. Turn down your power to say, 1 W, and try for the Thousand Mile Per Watt award (or the 10,000 MPW award).

Geez, the list is endless. Your problem is that you have no imagination! It's no wonder your QSOs appeared so boring to you; I can imagine how the other fellow felt!

1008. ANNOUNCE: New NSS Transmitter tour webpage

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-22 00:00:00 UTC
From: Jim Hawkins <jimh@exit109.com>
Message-ID: <353E9C96.CC542C04@exit109.com>
Source record: 173623

On April 18, I visited the NSS Naval Radio Transmitter site in
Annapolis, MD which
recently ceased operation. Many other hams and radio enthusiasts from
all over the
country were there.

I have created a webpage showing 22 pictures from the tour and
information derived from
presentations given by former engineers of the site.

The transmitter input power was 1 million watts at a frequency of about
20 HZ to
communicate with ships and submarines.

The URL is:

http://www.exit109.com/~jimh/nss.shtml

Enjoy,
73,
Jim Hawkins - WA2WHV

Try to find a HTX-100 from Radio Shack. I know, Radio Shack, but it's a good radio. It'll will do both CW and SSB at 25 watts PEP.

I have a Yaesu VX-1R version A105 that I would like to trade for a A106 version. The A105 has full 800mHz and the A106 has a little better Broadcast
band reception. If you have a new 1R that is a A106 and wish you had full 800 let me know.
My VX-1R is in good condition, some scratches but nothing major. I did the software mod from http://www.icongrp.com/~sllewd/ so the radio has never been opened.

There is an article in one of the 97 QST's for a MCW keyer circuit that hooks up to any HT, or modle FM rig. Real simple to build and use. Our local club uses them for our code classes.

E-mail me and I'll find the date/issue.

Source record: 173701

Wanted to do this ever since I was a little kid. Finally decided, amidst the mid-life crisis, to pursue some of those dreams that I had never had time for. Here's the deal...I like futzing around with antennas and radios trying to get them to work optimally. I like building qrp cw rigs and playing with them. I don't keep them long, just long enough to try them out and move onto to other things. I like trying to design some antenna mount for my car that works better than the other 25 I have already built. I also like to drive to mountain tops with the whole shack, hf, uhf,vhf and talk to anybody I can find.

Sitting in front of a computer chatting with anonymous goof-balls just doesn't cut it. Too much bullshit, too many whackos, no challenge to it at all. In fact, n all 15 to 20 times I have tried it, the "conversations" have ALWAYS ALWAYS ALWAYS degenerated into some anti-american/government rant or some sort of kinky sex come-on. But I digress...

My dad was a ham. After he passed away I inherited his radios and decided to
"grab gustos". I did the usual no code, tech plus and, ta-dah, last week, passed the general written and 13 wpm code test. I have to tell you that studying the code was worth every painful minute I spent (1 month 1.5 hours per day). 30 meters is an absolute blast.

The most important thing for a person wanting to do this is to have a clear goal in mind and BUDGET THE TIME. There is simply no other obstacle in the way.

>Mine puts out 800 watts cw pos and 900 watts ssb pos..I'm told this is on the
>low side for this amp.

If the power output is consistent between 80 meters and 10 meters, the finals are not "soft". With soft finals, I notice the power dropping first on 10 meters.

The power difference you are experiencing may be a problem in the measurement technique. It is difficult to get an accurate reading without using a dummy load and an expensive meter. The 300 watt difference (at these power levels) would be undetectable on the air. If you are running 300 watts less than the design output, you are taking some of the load off the power transformer, etc., without a noticable effect on the receive end of the QSO. It may be a blessing--especially since it's hard to find replacement parts for the SB-220. Let it "loaf" a bit. It's not hurting anything!

For more information, you can contact Bill K4BWC at Omega Electronics. He repairs Amateur amps for a living and has seen a lot of SB-220's.

I have a pair of Kenwood TH22AT handi talkies for sale. They each come
with the stock NiCad and charger plus an alkaline battery pack and
speaker mike.
These are modern, full featured, very small 2 meter HT's and have
performed flawless for me.
I am selling them simply because I need the money to buy more toys!

Cost: $175 each or both for $335.

Good rigs for a good price.

Greetings..

I have 95 Chevy Lumina Sedan that I need to install an Alinco DR-610 in. I have already mounted an on-glass Larson KG-2/70 with good results, but having trouble getting power and finding a place to mount the radio. I do have a 10 foot remoting cable to help, but the problem is that I have a console gear shift that takes away the usual under dash location that I use. I have thought of mounting the radio under the driver's seat and using the power seat power lead to get +12 VDC.

Anybody had experience with this type of install? Any of you professional 2 way guys got any tricks to installing radios in one of these 95 Lumina Sedans?

Please respond by e-mail or via the group.

73 es tnx for the help

My OM got a scanner around the time of the LA riots. A short time later, I got a handheld scanner to keep in my car (my car had been attacked), while he was listening to the scanner, he was listening to the ham frequencies. I asked him if he didn't want to talk back to some of the more intelligent conversations. He shortly began studying for his "ticket". He received his in Nov. 93. His first contact was a long time ham just up our street (all we had at the time was an HT with a "rubber ducky". Since the long time ham wanted to talk for a long time, my OM ran out of things to say and passed the radio to me as third party. I started studying that afternoon. I will never forget how I got my license, I took the test and passed January 15, 1994. I had an Alinco DJ-560 and could hardly wait to be able to make my first "real" contact with my own call sign. The OM teased me that since I had passed the tests, I could get on the radio. This was Sunday night. I told him that I still could not get on the radio unless we had an earthquake or something.

On Monday morning, January 17, 1994; at 4:35 A.M. I sat up and said "I REALLY DIDN'T WANT TO BE ON THE RADIO THAT MUCH!" If you don't connect with the reference, that was the time and date of the Northridge earthquake.

I have my vanity call now and a club which I founded to teach new hams how to work MIR and SAREX space shuttles. I have done it myself, and get a thrill every time one of my "net" make a first contact.

1026. UALR Callsign Database Inaccurate

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-23 00:00:00 UTC
From: dick@libelle.com
Message-ID: <dick-ya02408000R2304982054580001@news.newsguy.com>
Source record: 173465

On March 2, 1998, my wife's license was upgraded. Within 48 hours, all of the various online callsign servers reflected that upgrade. All, that is, except for the server at the University of Arkansas at Little Rock (UALR), one of the oldest of the online callsign servers.

Interestingly, subsequent changes to the FCC database +have+ been reflected in the UALR database, but for some reason, hers didn't show up. After a week, I sent e-mail to the webmaster and club President responsible for the server to let them know that lat least one record hadn't been updated. As a computer type, I know that +I+ would be interested in knowing if there was a crack that one or more record updates could have fallen through. I received no response to either e-mail.

What bothers me isn't that her record isn't current in the UALR database, but that if one record can be inaccurate, then others could be, too. If the UALR management isn't sensitive to correcting errors in one record, could they have ignored similar advisories from others who also might have noticed errors? After seven weeks, her record still doesn't match the FCC's. Are there no procedures in place at UALR to periodically assure the accuracy of their database?

Obviously, the various online callsign servers aren't responsible for errors in the FCC database, but their own databases should accurately reflect it or theirs is of limited value.

I desperately need some info (schematic layout, manufacturer) about a Ham Radio 2m VHF linear amp: Brand=Bias Electronics (urbania, Italy), Model=VHF 160

It's a black metal box with cooling frame on top, One switch (middle position off, down=SSB, up=FM) on front right, and two red LED's on the left ("on" and "tx"). There a double side PCB inside that looks a bit "home-brew" (maybe it's a KIT???).

The amp is based on a MRF 245 that should be able to do 250 watts (absolute max). 160 watts (see model) will probably what it's supposed to give me. It's doing now only 50 watts and switching (the relais) and vox is not working properly. While it looks quite simple on the inside, I'd like to give it a go and let the thing do it's normal job (QRO!).

For Dutch HAM's: Ik heb 'm gekocht van PA3FRD (Friesland?) uit nalatenschap van PA3EQU (silent key) op de markt in Meppel 1997. Misschien is daar nog wat info te vinden?

CAN ANYONE HELP PSE? PSE EMAIL TO: PE1RVK@VRZA.ORG

Tnx very much de PE1RVK (JO21WT)

I got interested in ham radio when in high school
and got a novice licence in 1964, (WN9NEI) was
never able to upgrade, dropped out under the
rules which required novices to upgrade or get out
after a year.

34 years later my oldest son gets interested in
it because a friend at school had a tech license.
I took this as an excuse to get back into something
I had always wanted to do. We enrolled in a community
education class taught by a couple of hams and took exams
in December. My son passed the technician license and
I found that enough code came back with a couple hours
of computer program practice to pass the 5 wpm test for Tech +.

I continued working on code by listening to tapes
while walking to work and jogging and was able to
pass the General exam 3 months later. I estimate
I spent about 2 hours/week over 3 months to get
from 5 wpm to 13.

Didn't get on the air with CW until AFTER I passed
general and found a used HF rig. My son continues
to enjoy 2 meters & 70 cm as well as packet. We're
having a lot of fun together and its been a great
father-son activity.

The hams in this area (Rochester, MN) have been very
encouraging to younger kids getting tech licenses. I
have sensed NONE of the disdain for the no-code license

that is so common here on usenet.

Greets, OMs and YLs...I moved down here to Columbia, South Carolina from Virginia about nine months ago and am looking for a local ham radio club to get involved with. My interests tend to run mainly toward local 2m/440 nets, public service event work, ARES/RACES, and Skywarn. For some reason I get a kick out of standing around with an HT in my hand watching other people run or bike by me. :) I did a lot of event work with the Lynchburg (VA) ARC--great bunch of guys.

I checked out the ARRL club list for South Carolina but there don't seem to be any ARRL-affiliated clubs here in the Columbia area. If anyone has any leads, please e-mail me with the info. Thanks and 73.

A vertical is an excellent choice for 80 meter DX but isn't all that great for short-haul work, such as a state-wide net. They can be built for relatively low cost and don't take up a great deal of acreage.

A good ground screen is essential for high transmitting efficiency, especially for a loaded (shorter than 1/4 wave) vertical. As a rule of thumb, you should put twice as much "sweat equity" into your ground system as the antenna itself.

I recommend avoiding commercially manufactured verticals due to their high price and "do all bands" design philosophy. There are a number of dealers (among them, Texas Towers) will sell aluminum tubing in variety of sizes. From one of these dealers, you could purchase enough tubing to make a full-size (1/4 wave) vertical at a lower cost than a short commercially made antenna. Tubing is available in sizes such that the OD of one size is slightly smaller than the ID of the next bigger size, which allows a telescoping or collapsible design.

If you decide to use a shortened antenna, place the loading coil about 1/3 of the way from the top, and use a capacitive hat. Also, solder all of the radial wires together, as it is desirable to maintain high conductance near the base and use aluminum anti-corrosion grease on all mechanical connections.

Good luck and good DX,

jEFF

Hello
I have a HTX 100 Radio Shack moblie with the Radio shack SWR/POWER meter (2000 watt max) forsale or trade. I'm looking for a good working Kenwood 201a or better Kenwood 2 meter rig. I'm looking for another 2 meter rig fo my packet station. Anyway I'll take 150 bucs plus shipping for the pair. The radio is in fine shape its a 7 on a scale of 1 to 10 and the watt meter is brand new in the box. The radio comes with mic, power cord, and owners manaul if you are interested drop me a line at oris@dirtball.com.
thanks for reading

1033. FS: SOLID STATE HF PA AMPS

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-23 00:00:00 UTC
From: Norman Hockler <norsan@bright.net>
Message-ID: <6hmmdtcvb2@cletus.bright.net>
Source record: 173632

Hi All,

I have some solid state PA amps for sale. They come from
the medical field and are shown as 600 watt and were used
in a pulsed mode. I have operated them at 400 watts for short
periods of time and the heat sink is much to small for
continuous operation and will need changed or a fan added
for SSB operation. They require 48 vdc for main power and
5 vdc for bias. BNC in and out. Uses 3 transistors, 1 driver
and 2 bipolar in the finals. The transistors are rated to
30 mc, however, output at 30 mc is very low. Unit has max
output at around 14 mc...I think the 2 transformers are not
broad banded enough and would need to be rewound or the c
changed to get a wider bandwidth. There is no output
filtering and would need to be added if you used alone
or would make great driver for larger tube amp.

Cost is $95 including shipping...contact me direct for
further information.

de Norm N8RGR

Hello Rick,

Some points on the SB-220:

This amp was designed under the old rules of "1 KW input to the final amplifier". This meant 1000 W key-down CW and 2000 W on SSB voice peaks. Because of this, the amp is operated under somewhat different conditions for the two modes. Also, although the 3-500Zs will each take a kilowatt CW, and 1200 watts SSB (input), the power supply in the SB-220 doesn't have that kind of capacity. (There was no point to it under the old rules). Some improvement can be had by using 240V supply instead of 110.

Most grounded grid class B triode amplifiers will give 60-65% efficiency - at best. This means that at 1 KW input, 600 watts output is pretty good. You didn't specify the plate current readings in your post, so I can't say what your efficiency is.

Most important is the fact that RF wattmeters aren't all perfectly accurate. Many are rated "plus or minus 10% of full scale" which means that on the 2000 W scale, the meter may be reading 200 watts high - or low. I've known several folks who have gone bonkers working over a rig because of "low output" - only to find that they assumed that their RF wattmeter was deadon accurate, which it wasn't.

Hope this helps. The 220 is a wonderful amp, but it has its limitations. A real steal in its day - the full legal limit for $360!

Source record: 173638
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.space

I have experience with a home made 2 meter egg beater and one on 10 meters. Best I could figure
from the crude measurements as compared to a single diamond quad it has a 3 DB gain and is omni
directional. It must compress the Horizantal plane to do that, and in so doing lowers the angle of
radiation I suspect.

I replaced a single diamond quad for 2 meters with the egg beater and every one in town said
my signal came up. I did not have a VHF SWR meter whern I built it and later found out it is
too long, but worked well anyway.

I made some crude tests against a 10 meter diamond quad and the results are in my antenna
program. If you want to take a look at what I did it is in an free antenna program that I wrote
and is downloadable at my web site. If you go there take the download link and the the antenna
program. I would send you a direct link rather than send you around the horn except I like to know
how many hits I get for the programs.

Thanks for reading....

Our school is starting a HAM radio club that, hopefully, will grow into an actual class for credit.
If you have any informative posters or things that would help teaching junior and senior highers about the basics of HAM radio, we will try to find a use for it.
To be sure we don't end up with duplicates, please check by e-mail before sending anything to the school.

Thanks in Advance!

The following is a list of radio gear that I am offering for sale. All equipment is being made available on a first come, first serve, basis. E-mail offer to me, and all reasonable offers will get a reply if the item is still available.

Icom 706 with remote cable and mounting bracket for face

SG-231 SmartTuner - antennr coupler 1.8 to 60 MHz.

SOLDKenwood TM331A 220 MHz mobile radio. Excellent shape. No bracket or manual.

Yaesu Vertex 2011 commerical VHF radio - Brand new condition
Yaesu Vertex 7011 commerical UHF radio - Excellent condition
These radios are based on the Yaesu 2500M chasis. I have the programming cable and software. Each radio has 99 channels that can be placed into 10 groups.

MFJ 1276 packet/pactor tnc - Brand new condition

DX-390 shortwave radio. - Brand new condition

PRO-39 scanner - restored cellular excellent condition

Icom IC-W31A duel band handie talkie with 800 MHz RX includes cellular
3 batteries - Tucker fast charger (incomplete needs cup)

Uniden Bearcat 895XLT - Includes home made computer interface cable and some collected
software. Brand new condition

3 element 6 meter beam

6 meter Ringo Ranger

Buyer is responsible for all packaging costs, handling and shipping charges/expenses.

How Did You Get Into HAM RADIO?

I used to drag race. Since I got married, my priorities have changed.
I needed to find a safer hobby, and one that allowed me to be at home
with my family.

I had already sold my race car--but had not replaced the hobby. I
knew I needed something to take 'refuge' from the stresses of work,
etc. I actually made a list of criteria I wanted my new hobby to
have:
1. Allow me to be home more often.
2. Not dangerous to life and limb.
3. Challenge my intellect.
4. Allow me to tinker and build.
5. 'All-Weather' activity, unlike racing.
6. Most of my spare time is during late-evening (after dark)
7. Beneficial to my family.
8. Beneficial to my community. (I live 20 miles from town)
9. Not terribly expensive, like a $15,000 bass boat.
10. Ability to build friendships with variety of people.
11. Ability to diversify within the scope of the hobby.
12. Integration with computers.
13. Friendly competition.

With these criteria continually in mind, I decided to find a new
hobby.

A close personal friend, W5LA, knew I was looking for a hobby. I did not know very much about ham radio. I did know that he was a ham, but that was all.

He invited me to his shack for a visit. After he completed several DX phone and CW contacts, I was hooked! I ran out to get a QST (July 1997 issue) and a TechPlus study manual. 19 days later, I became KD5CAS.

W5LA gave me an old 2 meter rig, and the night before the FCC issued my callsign I built a 3 element Yagi for 2 meters from these plans:
http://www.qth.com/antenna/tiny3.htm
I mounted the antenna on a shovel handle about 6 feet above the ground. My very first transmission keyed up a repeater about 150 miles away! WOW! What a way to start!

I started shopping for a used HF rig. A couple a hams had me over to their shacks to see their equipment. By September, I was set with a Kenwood TS-430s to a home-brew tri-band (40-15-10) dipole. W5LA was in my shack with me for my first QSO. I was so nervous I could hardly copy the CW, and had to rely on his copy to repond to the other station! W5LA offered encouragement and support as I entered 'frontier' territory.

I had already joined the local ham club. W5LA challenged me to a "Worked All States" contest. To make things more equal, he set some rules:
Novice HF bands only (to match my license priviledges)
CW or SSB
CW could not be faster than 10 words per minute (he can send/receive 30+ wpm)
wire antenna only (he has a beam, I do not)

I was ahead by several states at the November club meeting. Another ham brought the contest up during the club business. Boy, I was proud to know that I was 'beating' an Extra class ham. The club members have become a 'cheering' section for the contest. So, the contest also served to help me meet other hams in the club.

Every person that I have met or talked with face-to-face has been extremely helpful and patient in answering my questions or helping me build my shack.

And, on April 18, just eight months to the day since I was first licensed, I upgraded to General. My elmer was also at the test session, still encouraging me.

I don't regret becoming a ham!

Of course your first mistake would be listening to ANYTHING Cutie Boy has to say about the hobby, a QRP or low power kit can be had for around $50 from NN1G, Wonder Labs, one or two watts and a simple wire dipole will get you many hours of enjoyment working other stations around the world in morse code. You can also find older used tube gear for $50 or less and a wire dipole will cost around $15 including the coax to connect to your radio, insulators can be made out of a simple piece of PVC 5" long,
No it's not state of the art but like anything else you start with something simple and work your way up.

Yes you can spend tens of thousands of dollars on the hobby if you wish, but by no means is it required. Find a ham friend who can show you whats available at the local hamfests, or just go to one and ask the guy at the door if he knows of an experienced ham who can help you find your first rig, I'm sure he will find a club member who would gladly walk the hamfest with you.

You can find out where the hamfests are by going to :

www.arrl.org

they have lists of many hamfests in your area.

Ok, this is kinda stupid, but..... Have a friend with dual band radio, remote head. Not sure, but think it's an Alinco (about 8 yrs old) if not, it's kenwood, either way, this should be a generic question. Concerning the 'new' push and hold for what I suppose is relayed power on/off like most newer radios are, what would make this radio refuse to turn off?? It had to be wired thru ignition switch so it will turn off and on with the vehicle. Radio works perfectly, but it just won't turn off! Ohm meter says the switch itself on the control head is fine. any ideas??
thanks,
Randy

1066. Cross Posting to CB Newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-24 00:00:00 UTC
From: yrac@aol.com
Message-ID: <1998042410472200.GAA10467@ladder01.news.aol.com>
Source record: 173478

From time to time, unfortunately, someone starts a thread like the one about the CB operators who try to operate on 10 meters, and cross-posts it to the CB newsgroup.

This offends the CBers, probably none of whom are participants in operating illegally in the Amateur 10 meter band. Those who are "freebanders" usually take great care to remain below 28.0 MHz. The rest stay on the channels assigned to the CB radio service.

Out of respect for those who operate legally, and recognizing that many of our present and future Amateurs have CB radio experience, please use caution when cross-posting between the ham and CB newsgroups. Thanks in advance for your help and cooperation. The content below is reprinted from a posting in the CB newsgroup to illustrate the point.

My only question is what the hell do you Hams who come to a CB news group expect
when you start with your preaching here? I can tell you I don't like it at all! When I go on a Ham news group from time to time I know where I'm at and talk ham, that's the difference. I have personally never seen a CB operator on the ham groups of fido, but every echo I have ever been on since way back has always
had some self apointed ham bothering the people in the group! That's why I have little patience for it myself, want to come here fine, just be another 11 meter operator when your here. Don't know how this thread started just adding my two cents. There are a few good hams out there, but most of them are hanging around with the other good hams..... N1IUZ 738

When I was assigned my vanity call, the UALR database entry for me
read: "KH6HZ ..... (Previously KD1HZ, Technician)" Obviously a
1-land 2x2 is not a tech call; I sent them e-mail about it letting
them know they have an error in their import routines. I didn't get
a reply, but a couple of weeks later I noticed that they removed the
(Previously...) from my entry. In fact, if you look up my old call,
it doesn't even exist.

I had a callsign change in late February, about the same time that the FCC computer was down for several days. Likewise, my new call showed up on the other callbook servers, but not the UALR server. I checked again this week, and my new call was not listed in their database. FYI, you can search the FCC's database directly, not only for amateur calls, but commercial license information, also.

1070. How I got into ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-24 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6hq4soqnq1@w3eax.umd.edu>
Source record: 173482

I am currently 29.

I started blowing up LEDs at age eight. It was only then that
I discovered the current-limiting value of the resistor.

At 10, I got an old shortwave at a yard sale, and listened to
Radio Australia on 9.something MHz on a Sunday morning. Then
of course, there were also individuals talking, and what sounded
like Morse code, although you had to turn the BFO on to hear them.
On my 5' hank of wire, of course, I couldn't hear much, but WOW,
there was a lot of stuff out there, and from all over the world.

My cousin had a better shortwave radio than I did - we got to
listen to Radio Beijing every day.

I got a CB radio at 12, and it was neat, but the language was
pretty much appalling, esp. when mom & dad heard what was going
on. Not that I'd never heard that language before, but it was
pretty offensive and inane stuff.

At 15, dad (still not a ham, even after years of threatening to
get his license) introduced me to Chuck, W3GQY, who had just
installed a Clegg 2m rig in his car and was chatting via the
146.64 repeater in Rockville, MD.

He then showed me HF radio.

Within a month, I was in a class at the IBM Gaitherburg ARC.
We got to listen on the old Collins setup after instruction.
Eventually, I passed my Novice exams, and the proceeded to
wait 8 weeks for KA3NJI to be assigned to me.

Radio-less and heavily into the college entrance thing, I
remained inactive until after graduation. I thought I'd
found a radio, and it blew up on the bench...then found
a nice TS-520S at a hamfest and experimented with antennas
all summer.

Working from a townhouse with an attic antenna was frustrating
yet gratifying. I had to work for every contact, and because
the antenna wouldn't get onto 80 meters, I was basically
relegated to 40, meaning that without a CW filter, I had to
learn to listen REALLY hard to pick out the signals between
the heterodynes from the shortwave broadcast stations from
Europe.

I pity new hams who never have to "work" for a contact.
There are so many ways of making "easy contact" with people
that require virtually no skill whatsoever...this most
definitely made me a far better operator than if said
contacts had been easy.

I held two jobs that summer, working 50+ hours a week,
and on the weekends and LATE at night, worked probably
thirty states on 40 meters.

After that, I proceeded to get up thru Extra in a period
of three months. Fortunately, this was in my first
semester of college (before the onslaught).

Also, fortunately, my practical experience gained through
ham radio allowed me to have a better understanding of
what they were trying to teach me in Engineering school.

This person, from whom flows endless stream of badmouthing
ham radio, hams, and everything related to ham radio, has
chosen a "VA" call terminating in

"QRU"

Any serious CW op or tfc handler knows that QRU means

"I have nothing for you."

Could it be that Masa is keenly aware that he truly has
nothing additional to give to ham radio or any of its
participants?

Nothing wrong with digital modes Masa, I was responding specifically to your comments regarding spending lot's of money on the hobby. Additionally who ever said ham radio was supposed to be fast or efficient, your right about one thing, morse is fun.

My multi-element dipole at my parents home is still in the air. Been there since 1978. By the way Masa do you know of ANY hobby that is immune to the forces of mother nature?

> > 7. Beneficial to my family.
>
> yes, by spending the money.

My sons and I enjoy radio together, just like fishing and bike riding so I can say that radio is definatly beneficial to MY family.

> > 8. Beneficial to my community. (I live 20 miles from town)
>
> likely in the small place, but not in the big city.

I can't believe how stupid you are Masa, in one breath you tell us how all the 2m FMers in Montreal pulled together to save the day and now your telling us that radio is not beneficial in the city only in a 'small place' Your such idiot Masa, do you ever stand by your statements or just argue the opposite of what anyone says?

He's saying $15000 IS expensive you idiot, how in the hell are you getting through college without the ability to comprehend what you read? Must be a pretty easy University.

Ever actually RUN a contest Cutie Boy? I doubt it, ever apply for any awards on HF, if so tell us more.Ever get involved in a Field Day event? If the answer is no, no

and no then your not in a position to comment about 'friendly competition'

Poor underpaid federal employe's. They should seek
an executive position with the ARRL. then they could
make more money, and their uselessness will always
have plenty of company, from the ARRL executives.

Actually, Masa, I *don't* say that *anyone* has to learn Morse because someone says so. What I *do* say, is that if they want to increase their Morse Code speed so that they can pass the 13- or 20-wpm Morse code *requirements* for General or Extra Class FCC Amateur Radio licenses, I can help them.

It's time you started thinking, Masa.

Source record: 173491

You folks should quite whining about how useless the FCC has become, and understand just who, and what, caused this "once proud agency" to end up in it's presently reduced circumstance. The total blame for what you are crying about should be put squarely on Uncle BILLY CLINTON, and his hireling ALGORE. When he first entered the Whitehouse, Uncle Billy appointed his best buddy, and FOBH (friend of Bill and Hilory) Reed Hundt to the commission and named him Chairman. He then gave Mr. Hundt a mandate to gut the commission, and turn it into a revenue producing agency to help balance the budget, by selling off spectrum and bandwidth. Komrade Hundt took his task very seriously and forceably retired, fired, riff'ed, and or reassigned most of the then FOB staff, closed all the monitoring stations, closed over half the field offices, and distroyed a once proud agency. The remnents now called CIB, doesn't answer any phone calls from the public, because they just don't have the staff for it, and the Public must run the Telemarketing Maze of HQ's 800 number Call Center. There isn't anyone left that has time to deal with anything short of " Life and Death" situations, and those people that are still out in the field are mostly tied up doing the paperwork required to just keep the remaining field offices open. The travel budget just doesn't exist for what few field agents are left to go out and be effective outside any areas local to their offices. Komrade Hundt tried to kill the CIB altogether, but didn't quite have time to finish before he scatted out of DC one step ahead of the DOJ lawyers. The new guy, is an unknow, so far, but he seems to have no plan for the CIB, and is following the route of his predecessor. If you really want the FCC to be effective, call your Sentors and Rep's, and complain. Tell them unless they fund and fix this agency you are not going to vote for them again. Call that jerk Senator for the south who wants to kill the whole comission and tell him to take a flying leap. If you really don't care, then do nothing, and the DC boys will continue to trash and gut this agency until they finally kill it off completely.

From: mattlinn@hotmail.com
Message-ID: <6hqoc8$3k1$1@nnrp1.dejanews.com>
Source record: 173494

I saw an ad for a plug in tv antenna about a year ago.
It was a small rectangular device which plugged into a standard wall outlet
and used the power lines as the actual tv antenna. I don't know how it works,
but the ad said that the reception was very good, so the power must not cause
signal disruption.
Unfortunately, I can't remember what it was called.
Anyway, does anyone knows where I could get one of these? (new or used)
Thanks.

1084. Dealing with users such as Cutie Boy a.k.a. Masa

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-24 00:00:00 UTC
From: KD5CAS**SPAMHATER**@iamerica.net
Message-ID: <3540e879.24344244@news.iamerica.net>
Source record: 173496

All --- Reap what you may from this information.

Internet Service Providers are becoming more and more aware of the detrimental facets of allowing abusive users like Cutie Boy a.k.a. Masa to remain on their service. Most ISPs object to Unsolicited Commercial E-mail, SPAM, Usnet abuse, improper Netiquette, etc.

The best way to address these problems is to notify the person's Internet Service Provider. ISPs usually have an e-mail address set up to accept reports of objectionable nature. This address most often is: abuse@domain.com

When reporting improper activity, be sure to include FULL HEADERS in any e-mail that you send to an 'abuse@domain.com' address.

Internet WhoIs Query--- http://rs.internic.net/cgi-bin/whois
---use this to find ownership of a particular domain name and to find the DNS host of that domain. Notice also that the results include telephone, fax, and e-mail addresses of the Administrative contact (the owner), the Technical contact (the DNS host/ISP), and the Billing contact (usually the owner)

To send a report of improper behavior, e-mail:
abuse@namesecure.com

Also, send an e-mail to the upstream ISP:
abuse@alter.net

Cutie Boy includes several domain names in his messages. Each of those domains are hosted by someone, who in turn has an upstream ISP. Here are the domain names that he references. Do a WHOIS an each of them. Then do a WHOIS on their DNS host (domain name servers), and so on. You get the idea.

radiotelephone.net
geocities.com
nocode.org
total.net

The headers of a newsgroup posting reveal much also:

From: cute@radiotelephone.net.ham (Cutie Boy)
Newsgroups: rec.radio.amateur.misc,rec.radio.amateur.policy
Subject: Re: How Did You Get Into HAM RADIO?

[1079]

Closed Circuit Advisory

The following advisory is not for transmission over amateur radio. As spring and summer approach, we are again forced to ask our listeners for their financial support. According to our Support Fund Administrator, we currently have only enough in the bank to keep going through the middle of May. And that does not take into account our fixed annual expense in presenting the annual Young Ham of the Year Award to some worthy young radio amateur. Our administrative costs in that area alone is in excess of a $2,000.

So please help by contributing what you can, as soon as you can to the Newsline Support Fund. The mailing address is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1079 for release on Friday, April 17, 1998 to follow.

<*>

The following is a QST

Hams take the lead when a powerful tornado rips through central Alabama, mandatory bandplans may be on the way and the ARRL says it wants hams to arbitrate rather than litigate. These stories and more on Newsline report number 1079 coming your way right now.

<*>

Birmingham Tornadoes

At least 30 people were reported killed in the wake of a devastating tornado that tore through residential communities in Jefferson county, Alabama. Before, during and after the storm, amateur radio operators played a major role.

The first amateur radio report of Alabama's worst tornado to strike since 1932. It was a storm of rare magnitude, impossible to see in the night sky. An F5, packing winds estimated at over 260 miles an hour. The tornado rips a nearly 30 mile path of destruction as it plows through neighborhoods barely 10 miles west of Birmingham. 1200 homes are destroyed or damaged. With rescue crews unable to get through streets covered by fallen trees and power lines, some storm victims lay trapped in debris for hours. That leads to calls for help on the 147.140 repeater. One of those responding is emergency medical technician Janice Rock, KF4PVR:

"There was a ham radio operator who was on the scene. He couldn't hit the repeater with his HT. So we, as soon as we got there. We were all simplex, were able to talk to him and relay information back about how bad it was. And he warned us before we got there about how bad it was. I've never seen anything like that." KF4PVR

A man bleeding from a head injury needs to be taken to an ambulance. But debris covering the ground makes vehicular access impossible. Rock and two others find a front door in the debris. They take turns, carrying the man on the door through nearly a quarter of a mile of downed trees and pieces of homes to an ambulance.

"We spent a lot of time going from house to house asking people to put candles out. The gas was just

hanging in the air. Multiple gas leaks. There was one lady that we went after who was in a storm shelter who was injured trying to get to the storm shelter. And when we got there they had already gotten her out. From what we understand she didn't make it." KF4PVR

A veteran of disasters turns out to be a victim himself. Mark Parmley, WA4UHC, is the Birmingham Amateur Radio Clubs Director of Emergency Communications. Parmley lives in Edgewater, one of the communities pounded by the deadly storm:

"I knew about the warning about twenty minutes before it actually hit. They were talking to the Skywarn Net Control at the time and heard it coming. Just fifteen seconds to react. There was a real dull roar off in the distance. But, I could tell it was coming toward us. And it was real low frequency. The ground was shaking. We were praying like crazed and had our fingers crossed. That was about all we could do." WA4UHC

Parmley and his girlfriend ride out the tornados attack while sitting in a bathtub with a large cushion over them. They escape injury, although the house sustains damaged.

As the storm moves northeast, its fury never lets up. Members of ALERT, the Alabama Emergency Response Team, stay on the air, helping the National Weather Service track the storm. Five churches within a one mile area are leveled. The tornado offers stark displays of its awesome power. One home is gone, while the house next door might have lost a shingle. Canceled checks from storm ravaged areas are found nearly 150 miles away in Georgia.

"Roger, had to park and walk over to the old building which is and eighth of a mile maybe. With radios in hand."

Members of HEART, the Hueytown Emergency Amateur Response Team, activate on VHF and UHF frequencies. They stay busy for nearly 2 days, providing communications support for emergency management and Red Cross operations. President Clinton and Vice President Gore visited the disaster scene. They promise to do everything possible to help victims rebuild from a disaster Alabama will never forget.

The mighty storm barely missed making news elsewhere. Had it maintained its course on the ground, it would have hit high rise buildings in downtown Birmingham just four miles to the east, and two miles beyond that, the Birmingham Airport. To learn more about what the Birmingham amateurs did, go to the ALERT website at:

www.bandmaster.com/alert

(Via Newsline)

<*>

Nashville Tornado

Hams went on alert as a series of deadly tornadoes swept across parts of the south on Thursday, April 16th. The worst of the twisters was rated at an F3. It set down near Centennial Park in Nashville,, Tennessee. That's where it ripped off roofs in the downtown area, knocked over at least one eighteen wheeler on the nearby interstate highway and splintered mobile homes in rural areas.

Ham radio severe weather spotters have been active since the first warnings were issued by the National Weather Service early in the day. As we go to air about 12 hours after the twisters hit, hams are still at work. Some are providing back-up relief communications across Tennessee. Others are donating their time as storm spotters in Alabama, Georgia and western North Carolina.

The National Weather Service says that the worst may be yet to come. This is because mid April is traditionally the worst month for these kind of killer storms.

More on this tornado story in a future Newsline report.

(Via Newsline compiled from various reports.)

Cincinnati Storms

Another area hit by the wrath of Mother Nature were parts of Indiana, Ohio and Kentucky. There, hams went on alert wondering if tornadoes were on their way.

Severe weather rocked the tri-state during the early morning hours of Tuesday, April 7th.

Amateurs from northern Kentucky and Cincinnati, Ohio were awakened from their beds to an early spring storm. Many amateurs checked in to the Cincinnati Skywarn Net held on the 146.88 repeater.

"Yes, I'm here in Lakeside Park. Do you copy? We are having very large hail. Appears to be at least 3/4 inch in diameter. It is very windy. I'm at a high point, my second floor. I'm not seeing any rotation or nothing. There is an awful lot of lightning and it's very windy.

Roger, Lakeside Park in Kenton County. 3/4 inch diameter hail, very windy. Net stand by."

The storm, with golf ball sized hail and high winds caused frayed nerves and some minor property damage. But, luckily no personnel injury.

Possible mandatory adherence to bandplans

The ARRL has filed its long awaited request to the FCC to codify adherence to what have been till now, voluntary bandplans. Following up on action taken at the January ARRL Board of Directors' meeting, the League has asked the Commission to equate observance of voluntary band plans with good amateur practice.

The League filed its request for a declaratory ruling on April 3rd. In it, the national society asks for codification of several points of ham radio operation. First, it wants the FCC affirm that any amateur radio operation that conflicts with established voluntary band plans, and which causes interference, or, adversely affects those operating in accordance with these band plans to be considered as being in direct violation of FCC rules. It also requests the Commission direct that hams should be familiar with current voluntary bandplans and that they are required to abide by them. Finally, the ARRL wants the FCC to state that those radio amateurs who don't operate in harmony with those band plans are not operating in accordance with good amateur practice.

The League has asked the FCC to issue this Declaratory Ruling as fast as it legally can. Other hams who oppose mandatory bandplans are vowing a

court fight if the Commission proceeds without first issuing a Notice of Proposed Rule Making and permitting them time to comment.

As previously reported, Newsline will be presenting a live to the internet debate on this ARRL request from Hamvention '98 next month. This netcast takes place at 10 AM Eastern on Sunday, May 17th. A hot link to the Real Audio server will be available from our website at:

www.arnewsline.org

ARRL to hams: Arbitrate - don't sue

The American Radio Relay League is going to try and stop the escalating level of ham versus ham lawsuits. This, by getting radio amateurs to first try arbitrating their ham radio related disagreements.

The League has inaugurated an arbitration service for hams, ham organizations, citizens and other groups having disputes relating to Amateur Radio. The ARRL Arbitration Service offers a substitute for litigation by providing binding arbitration to settle disputes. Arbitration will be arranged through the office of Chris Imlay, W3KD, the League's General Counsel. Arbitrators will include ARRL volunteer counsel. Potential cases could involve neighborhood interference situations, disputes within local radio clubs, disagreements between a hamfest committee and an attendee or exhibitor, or even the use of a frequency, typically, but not necessarily, involving one or more repeaters.

Creation of the Arbitration Service is the first step toward a complete Alternative Dispute Resolution system, as envisioned by the ARRL Board at its January 1997 meeting. The ADR system ultimately could include mediation and non-binding arbitration.

Cases may be instituted under the ARRL Arbitration Service by filing a signed Arbitration Agreement together with the $50 per party filing fee with the Leagues' General Counsel. For complete details on this service, contact:

ARRL General Counsel
Christopher D. Imlay
5101 Wisconsin Ave North West
Suite 307

Wireless privacy bill passes house

From Washington, word that HR 2369, also known as the Wireless Privacy Enhancement Act of 1998, has passed the House of Representatives. The house passed version of the bill includes a report that specifically resolves concerns that the Amateur Radio community raised with the staff of the House Telecommunications Subcommittee.

When HR 2369 was first introduced, the American Radio Relay League feared that it unintentionally could have outlawed all out of band operations including MARS and Civil Air Patrol, as well as most scanning and short wave listening. Working with the office of the bills sponsor, representative Billy Tauzen, the ARRL and the hobby radio industry got the language changed so as to protect the legitimate concerns of radio enthusiasts.

The bill now awaits action in the Senate.

No I-Phone fees

If you use Internet Phone for repeater linking, we have some good news for you. For the time being, making calls over the Internet will remain free of tariffs other than regular Internet Service Provider fees.

In a report to Congress, the Federal Communications Commission, says it is not ready to conclude that the long-distance calls carried over the Internet or other data networks should be regulated as a telecommunications service. That could change, says the FCC, but not anytime soon.

(Via published news reports)

FCC Electronic filings

The FCC has amended its rules to allow the public to file comments and other pleadings electronically via the Internet in many rulemaking proceedings. Starting later this spring, the FCC will permit electronic filing in most notice and comment rulemaking proceedings, most proceedings involving petitions for rulemaking, Notice of Inquiry proceedings, and petitions for reconsideration.

(Via FCC release)

<*>

ULS Comment deadline announced

The FCC has also set May 7th as it's the deadline for you to file your comments on the agency's proposal to expedite the creation of a Universal Licensing System. Your letters must address WT Docket 98-20. Reply comments in that proceeding are due at the FCC no later than May 22nd.

McKim killer sentenced to life

Alan Eugene White, KA0QNB, has avoided the death penalty for the brutal bludgeoning deaths of a 5 year old boy, his grandmother and his great grandmother, but he will spend the rest of his life in prison.

Alan, Eugene White, KA0QNB, avoided the death penalty on Friday, April 10th for a triple murder in Salina, Kansas in 1996. White, 27, pleaded guilty to the murders of Christopher Abercrombie, Carol Abercrombie and Dolores McKim. The widow of Jim McKim, W0CY. He will spend the rest of his life in prison. White was sentenced to 157 years without the possibility of parole.

Prosecutors decided not to seek the death penalty after relatives of the victims accepted a plea bargain in which White agreed to a video taped confession and to answer any questions that the victims families might have. And to give up his right to appeal or to seek clemency.

When asked by the judge, if he understood that he would spend the rest of his life in Prison, White answered yes.

There will be no appeals and no more court appearances.

White was arrested several months after the crime at a homeless shelter in Boston after being profiled on the Fox television program America's Most Wanted. While the plea bargain spares his life, it also means he will never again see the light of day outside of prison bars.

APRS World Internet Network

Turning to APRS news, Bob Bruninga, WB4APR, the father of the mode and winner of this years Dayton Technical Achievement Award reports that his working group is making good progress in established an Internet linked ground station network for amateur satellites. As we go to air, Bob says that there are full time sites on line in Maryland and in Mexico city with others scheduled to join from Texas, Illinois, Argentina and South Africa. There is also progress with reporting stations in California, Hawaii, Taiwan and Australia.

Still needed are feeds from Japan, eastern Europe and any other areas more than 1000 miles from any other site. Those interested in taking part can contact Bob at his call book address or by e-mail to:

bruninga@nadn.navy.mil

You can also get to meet Bob if you attend the Dayton Hamvention.

<*>

Marconi Day to be celebrated on April 25

And this year International Marconi Day will be celebrated on inventors actual birthday. That date is Saturday, April 25th and numerous radio clubs around the world have announced that they will be active with commemorative stations. How many? Far to many to list all of them here.

(Via International Marconi Day Commission news release)

<*>

DX

In DX, I4LCK reports that his recent operation from Mozambique netted almost 11,000 contacts. The operation ran for thirteen days, used the callsign C91LCK.

(Via I4LCK)

And the U.S. Islands Awards Program club station KL7USI will be active from Islands On The Air location NA-041. That's in Alaska with the station operational from June 6th to the 13th. 14.260 MHZ will be for phone contacts. QSL direct or to the operations website at:

www.eng.mu.edu/~usi

(Via IOTA)

And a new world-wide six meter world wide dx club has been formed. According to N0EDQ and KA0NNO, you can get information about it by going to their site on the world wide web at:

http://6mt.com/club.htm

(Via VHF Reflector)

Also 3W5FM in Vietnam has been heard on 20 meter CW. Check around 14.007 MHZ beginning at 13:30 UTC and also between 23:00 to midnight UTC. 3W5FM can be heard daily on 1.826 MHZ on 160 meters around his sunrise. QSL via:

UA0FM
P.O. Box 66
Vladimir City,
630011, Russia

(Via Modern DXer)

And listen for Nepal coming this summer to 160 meters. Word is that 9N1AA, is nearly done building his new home. Once completed, he will have the capacity to be active on all bands and all modes. He hopes to be active by the end of July or early August. The good news is that he already has permission to go over his neighbor's property to tie off the far end of his 160 meter wire antenna.

(Via OPDX)

<*>

Foxhunting Weekend

And finally, do you want to be a world champion? International style radio direction finding, or foxhunting, is coming to America. The ARRL recently appointed Joe Moell, K0OV as the United States Amateur Radio Direction Finding Coordinator. Here he is with the third and final report in his series on the National Foxhunting Weekend.

Last week I told you how hidden transmitter hunts in many countries of Europe and Asia closely resemble Orienteering meets, when hunters run or trot or walk--through a large woods looking for hidden fox transmitters. There's a movement afoot to bring this kind of radio orienteering to the Americas, so we can compete for World Championship medals.

There have been two such formal events here in southern California, and more are in the works. But the biggest force behind international style foxhunting is the Friendship Amateur Radio Society, or FARS.

Founded in Portland, Oregon about ten years ago, this organization now has chapters in the USA, Canada, Japan and Asiatic Russia. They have held five multi-national get-togethers for camaraderie and ham radio contests, including QSO parties and on-foot foxhunts. They're called the Friendship Radiosport Games.

The last one was in Khabarovsk, Russia last year, and the next will be next year in Portland. If the FARS folks have their way, it will also be the first International Amateur Radio Union Championship hunt to be held here in Region 2, which encompasses North and South America. If you think you have what it takes to be an international radio-athlete, a good way to get started would be to make this kind of transmitter hunting a part of your club's National Foxhunting Weekend activities.

There's more information in the April issue of CQ VHF Magazine, and also on my Web site, which you can access via link from the Amateur Radio Newsline site. See you on the hunt!

Remember, the National Fox Hunting Weekend takes place April 25th and 26th. All the details can be found in the April issue of CQ VHF Magazine.

Bruce & Debora Gordon wrote in message <6hqgmkojb1@

Much of what the above poster says is true. However, the
sorry untold part of the story is the way the spineless,
back stabbing CIB (formerly FOB) managers back stabbed
and trashed their own people, just to kiss Reed Hundt's ass.

Viet Nam veterans were trashed, while people like
Carl Pyron, already a rehired annuitant and the former
Southest Regional FCC director, were protected.
The story of the Pyron outrage should be told over and
over. It is a disgrace. King Pyron lost his region in the
1996 reorganization. His CIB (FOB) manager buddies
protected him though, by hiding him in an office out in
Texas (golly, Pyron's home state). Pyron was transferred
to the FCC Dallas office at government expense and set
up in a lavish private office, just to save his worthless ass.
To this day, King Pyron plays chess on his computer and
micromanages the coke mess for $75,000 a year!

Meanwhile, while Uncle Carl was being protected,
veterans with veterans' preference were be shit canned.

There were other atrocities too, perpetrated by the
corrupt CIB managers. Like the former manager's
son in Powder Springs, Ga. who had no veterans'
preference and no seniority, yet, golly, he was kept on
the payroll, while much more senior, better qualified
Viet Nam vets lost their jobs.

The FCC CIB managers could have handled the 1996
downsizing in a fair and equitable manner. They chose
not too. They chose corruption and back stabbing, lies,
and cheating instead. AND this will NEVER be
forgotten!

Ironically, most who lost their jobs formed the quality
backbone of the CIB (FOB). Thus, private industry
now has these quality people, while the FCC CIB has
the worthless trash it fought so hard to keep!

Who was the loser in the 1996 downsizing? The
tax payer, who now has to pay the exhorbitant salaries
of the worthless shit that was retained on the public
payroll! Who was the winner? Private industry
was the winner, they now have some fine quality

former FCC employees!

TENNESSEE HAMS VOLUNTEER AS TORNADO BLASTS MUSIC CITY

Music City--Nashville, Tennessee--found itself at the heart of a maelstrom
April 16 when a tornado struck and caused extensive damage in the downtown
area. Other twisters caused damage in outlying areas. Delta Division
Assistant Director Jack Hill, W4KH, says hams were active on
weather-spotting nets and later supported relief and damage assessment
efforts as well as the Red Cross.

Early on the morning of April 16, as the first tornadoes struck Dickson
County in middle Tennessee, various spotter nets were activated, and some
```

hams went to the National Weather Service office. After a day of tornadoes throughout middle Tennessee, the twister that hit Nashville struck in late afternoon, wreaking havoc. Among the damaged buildings was the Tennessee American Red Cross Building. Hill says the storm hit the historic Edgefield neighborhood, ripping apart houses and destroying entire streets.

"More tornadoes were spawned out of the main storm and hit different parts of the city and continued active several miles to the east--beyond Lebanon, Tennessee," Hill said.

Several ARES nets were activated in Davidson, Rutherford, Maury, and Sumner counties and coordinated with the NWS weather-spotters' net, with Robert Harris, N4PQV, as net control. Hams from Nashville and surrounding counties reported storm damage and funnel cloud sightings and helped to confirm the observations of the NWS Doppler radar. Hill says these nets stayed active into the night as the temperature dropped and the risk of additional storms rose.

The following day, the Red Cross asked for ham radio volunteers, primarily to coordinate communication. The contingent dispatched to chapter headquarters found non-functioning radios and damaged antennas. The team managed to locate the Red Cross's 2-meter transceiver and a power supply and connected it to the antenna on the rubble-strewn roof. Hill says local Red Cross resources and personnel were stretched thin because of the Alabama tornado just a week earlier.

Working with the Red Cross, some hams manned radios and provided directions to the Red Cross Emergency Response Vehicles (ERVs). Others handled logistical tasks, repaired equipment and installed new antennas as needed, and set up a portable tower (borrowed from the Nashville ARC) to help provide communication at the primary shelter and feeding facility. At one point, Hill says, he found himself up a tower repairing the 2-meter and VHF low band antennas and rebuilding the HF antennas. As the weekend wore on, hams became active in damage assessment. Hill says 19 hams supported the teams of Red Cross assessors in the field and helped to cut the time needed to do an accurate survey.

Red Cross volunteer Chet Hallberg, K0TCB, of Kansas City, was among those dispatched to help in Tennessee. Hill says Hallberg and other Red Cross personnel turned out at the April 20 meeting of the Radio Amateur Transmitting Society--with several other clubs represented--to express appreciation for the hams' quick response and solid support. "We are still supporting the regular communications needs of the Red Cross teams who have settled in for the long, hard grind of helping Nashville get back on her feet," Hill said, adding that far too many hams worked the disaster to mention each one, and "everyone played an important role."

LEAGUE SUPPORTS LOWER VANITY FEE SCHEDULE

The ARRL says it supports the proposed lower fee to obtain a vanity call sign. The FCC proposed recently in its fiscal year 1998 fee schedule that vanity filers would pay just $12.90 for the ten year term, once the new

schedule goes into effect later this year. That's the lowest fee in the history of the vanity program. Originally, vanity applicants paid $30 for the privilege of selecting a specific call sign. The fee jumped to $50 in September of 1997, just in time for Gate 3 filers but not in time for Gate 4 filers to take advantage of the $30 fee.

In comments filed April 22 with the FCC, the League called the wide variation in fees over the life of the vanity program "clearly inequitable" and said the FCC should have handled the matter differently. The League called the proposed $12.90 fee "reasonable" and urged its adoption "as soon as possible."

PREPARATIONS CONTINUE FOR NEXT WRC

With WRC-97 behind us, preparations already are under way for the next World Radiocommunication Conference. In fact, WRC-97 was barely over before the first Conference Preparatory Meeting for WRC-99 was held last fall. While it's not entirely clear right now if the next WRC will be held in 1999 or 2000, it's still being referred to as WRC-99. The ITU Council may decide the question of when WRC-99 will be held when it meets May 20-29 in Geneva. The decision could even be deferred until the 1998 ITU Plenipotentiary Conference in Minneapolis October 12-November 6. At least for now, planning will continue on the assumption that the next conference will be held in the fall of 1999.

The FCC WRC-99 Advisory Committee held its initial meeting in February. It will meet again on April 27. FCC informal working groups have been meeting over the past few weeks.

Earlier this year, ARRL Technical Relations Manager Paul Rinaldo, W4RI, represented the League on US delegations to several ITU Radiocommunication Sector (ITU-R) meetings in Geneva, Switzerland. Working Party 7C met in late February. This committee is responsible for studies relating to the Earth Exploration Satellite Service that has been eyeing the 430 to 440 MHz band for use by synthetic aperture radars (SARs). These systems are capable of penetrating the upper canopy of a rain forest to monitor ecological changes. Ken Pulfer, VE3PU, who represented the International Amateur Radio Union, introduced an IARU paper expressing concerns with respect to the 420 to 450 MHz band. An ARRL-authored paper also was introduced by the US, expanding on the theme and reviewing the status of technical sharing studies.

Working Party 8A met in mid March. This group--Amateur Radio's "home" in the ITU--is responsible for the amateur and the amateur-satellite services, among others. Representing the IARU at this session was ARRL International Affairs Vice President Larry Price, W4RA. He introduced an IARU paper detailing progress in HF data communication in the Amateur Service and setting out the characteristics of PACTOR I and II, CLOVER, and G-TOR. Several ARRL papers also were submitted by the US to update existing documentation.

Something called "fixed wireless access" (FWA--and sometimes called wireless local loop) could become a hot topic for Amateur Radio at the next WRC. The

idea is to connect user telephone or data equipment via radio instead of wirelines to an access point in the public switched telephone network. FWA proponents are looking at the suitability of more than 100 frequency bands between 27 MHz and 66 GHz--some of which involve amateur bands. A committee called Joint Rapporteur Group (JRG) 8A/9B is looking at FWA issues. Participants include those involved in the mobile and amateur services--from WP 8A--and the fixed service. Price also represented the IARU on JRG 8A/9B.

For more information on WRC-99 preparations, see http://www.fcc.gov/wrc-99.--thanks to Paul Rinaldo, W4RI, and Steve Mansfield, N1MZA

SUCCESSFUL MIR-SCHOOL SERIES CONTINUES

Pupils at Newman Elementary School in Needham, Massachusetts, were the latest to get a chance to speak with US astronaut Andy Thomas, KD5CHF, aboard the Russian Mir space station. On April 13, 14 fifth graders asked questions about life aboard Mir, Mir-shuttle dockings, and the duties of the Mir crew. AMSAT/SAREX Technical Mentor Randy Becnel, KC5YJI, called the contact "highly successful." The QSO was made possible via a telebridge with Ellen Baker, KB5SIX, in Houston, Texas. Students got to speak with Thomas for the full 10-minute pass and without interruptions that have plagued some recent school contacts.

Becnel said having Baker as the station operator turned out to be "an added and unexpected bonus" for the youngsters. A relative of hers attends Newman Elementary, and she has visited the school previously to talk to the students about life in space. Teacher-coordinator Angela Dinapoli also had met with Baker during a visit to Johnson Space Center. After the contact ended, Baker talked about ham radio and encouraged the kids to consider it as a hobby.

On hand for the occasion were local media as well as parents and other teachers and students. In an effort to involve as many of the youngsters as possible, teachers assigned several student reporters to cover the contact and write an article for the school's magazine, Dragonfly.

Since Mir-school contacts resumed earlier this year after a one-year hiatus, schools in several states have had a chance to chat with Thomas, a native of Australia. Two Connecticut schools remain on the schedule for Mir contacts in May. Additional contacts are possible before Thomas returns to Earth in June. As it now stands, Thomas will be the last US astronaut to serve a tour of duty aboard Mir. Thomas' Russian crewmates, Talgat Musabayev, RO3FT, and Nikolai Budarin, RV3FB, have performed a series of space walks in the past couple of weeks, to make repairs to the aging space outpost.

COLVIN AWARD TO SWISS GROUP FOR 3B7 DXPEDITION

An international group has received an ARRL Colvin Award grant to help fund a DXpedition to St Brandon (Cargados Islands) planned for May. St Brandon is part of the Republic of Mauritius in the Indian Ocean and is number 17 on the most-wanted list of DXCC entities. The ARRL Colvin Award Grants Committee voted to grant the Canton of Zug branch of the Union of Swiss

Short-Wave Amateurs $5000 for the DXpedition. The group, under the leadership of Karl Graetzer, HB9JAI, has additional financial and in-kind support from Yaesu and Cushcraft, as well as from various DX clubs and commercial sponsors.

"We are very happy to have the contribution of the Colvin Award," Graetzer said this week. "It will help a lot."

Graetzer says all preparations have been completed and the team now is busy with flight cargo, customs formalities, and other activities. The group plans to arrive by boat on May 6 (gear will be ferried to shore by small boats) and to operate as 3B7RF from May 7 until May 17. Operation is expected to be continuous on all bands, including VHF, depending on propagation. Modes will include CW, SSB, RTTY and SSTV. Two individual sites will be set up with four operating positions. Fifteen operators from Switzerland, the US, Japan, and Israel will share on-the-air duties.

More information on the St Brandon DXpedition is available at http://www.3b7-brandon.ch.

ARRL PRESENTS AT HURRICANE CONFERENCE

Field Services Manager Rick Palm, K1CE, Palm was a presenter at the National Hurricane Conference, held April 6-10, in Norfolk, Virginia. Palm opened the program entitled "The Role of Amateur Radio in Hurricane Communications" with an overview of Amateur Radio disaster operations.

Subsequent presentations on local plans and operations were delivered by Virginia SEC Frank Mackey, K4EC, Norfolk EC Dan Bigio, AD4ZK, North Carolina SM Reed Whitten, AB4W, NC Assistant SEC Bernie Nobles, WA4MOK, and Dare County (NC) EC Harry Bridges, K4UOR.

Hurricane Watch Net Manager Jerry Herman, N3BDW, discussed the role of his net during the 1997 hurricane season. Don Mahan, KD4WGV, covered amateur operations in support of the National Red Cross's Disaster Operations Center.

Palm explained the role of ARRL Headquarters in supporting local Amateur Radio disaster operations. He then led a roundtable discussion to conclude the four-hour session.

The audience of 40 was made up of both emergency planners and amateurs. Palm attended the general session April 8, opened by Virginia Gov Jim Gilmore and then-Acting National Hurricane Center Director Jerry Jarrell, who gave a summary of the 1997 season. As it was last year, disaster mitigation was a dominating theme of the conference.

Commerce Secretary William M. Daley this week named Jarrell as the sixth director of the National Hurricane Center. He'd been serving as acting director since last September. An announcement from the Center called Jarrell "a friend of Amateur Radio and always acknowledging the efforts of the volunteer Amateur Radio operators at W4EHW," the Center's ham station.

Next year's hurricane conference will be held in Orlando, Florida, and the League has been invited to be a sponsor.--thanks to Rick Palm, K1CE, and Julio Ripoll, WD4JNS

MIREX SCHOOL DAY TEST SET FOR APRIL 27

MIREX President Dave Larsen, N6CO, says the MIREX team has authorized a special MIREX School Day test on April 27. The test will start at 1000 UTC and conclude at 2300 UTC.

Larsen says the purpose of the test is to improve students' understanding of the Russian Mir space station and to use ham radio to demonstrate the factors involved in space communication. Even schools for the deaf and disabled will be able to experience the event through their computer displays, Larsen said.

There is no limit to the number of stations that can participate, since any Amateur Radio station at any school may monitor the downlink of the test. All stations will be able to capture and log communications from Mir and from those schools authorized to transmit. Because of limited uplink capacity, the number of stations authorized to transmit will be limited to under 100 per footprint area.

Bob Bruninga, WB4APR, has donated a special packet software version called MIRMON for unlimited use during this experiment. MIRMON will capture all position reports, bulletins, and messages, and provide schools with a constant display of the event. The software, further test details, and a replay of the last school experiment are available on the Naval Academy/MIREX Web page, http://web.usna.navy.mil/~bruninga/mirex.html.

Schools equipped with at least a 25 W 2-meter FM radio, omnidirectional antenna, and conventional TNC should have no problems participating. MIREX asks individual amateurs in North America desiring to participate to monitor the test in receive only, or to visit a school and set up a demonstration station to qualify for test transmit authorization. Some stations outside the US also are expected to participate.

Schools without current ham radio equipment can monitor the event via the Internet. Bruninga reports the first Internet-linked Mir ground station is on line and capturing all Mir passes over the east coast of the US and posting the information on the Web. According to WB4APR, the Internet site also removes all the connect-request-disconnect-busy traffic, allowing those on the Web site to see who is currently connected and what was downlinked on the last eight passes. The MIREX team wants to establish dedicated ground stations, (at least one per continent), that can link a receiver to the growing MIREX network. Currently, stations in the US, Mexico, Taiwan, and Spain under construction.

For additional information, visit the MIREX Web site or contact Bob Bruninga, WB4APR, at wb4apr@amsat.org.--thanks to AMSAT News Service and Dave Larsen, N6CO

ADE WEISS, W0RSP, TO KEYNOTE QRP "FOUR DAYS IN MAY"

Noted QRPer and author Ade Weiss, W0RSP, will be the keynote speaker at the QRP Awards Banquet May 15. The event is part of the QRP Amateur Radio Club International (QRP ARCI) "Four Days in May" during the Dayton Hamvention. Weiss is a member of the QRP Hall of Fame and author of The Joy of QRP and The History of QRP.

The banquet is Friday, May 15, at 7 PM. Banquet tickets are $22. For tickets or information, contact Scott Rosenfeld, NF3I, 4015 Sparrow House Ln, Burtonsville, MD 20866-1333; e-mail ham@w3eax.umd.edu.

A healthy showing from the QRP community is expected for the Four Days in May event, held each year in conjunction with the Dayton Hamvention. Headquarters for the event is Days Inn Dayton South, Miamisburg, Ohio. This year's FDIM begins Thursday, May 14 with a QRP Symposium featuring multimedia QRP presentations by renowned ARP authors and designers. "If you have ever wondered what happened to the building spirit, you'll find it here," said Ron Stark, KU7Y. Stark, a QRP ARCI member, writes the "Contesting for Fun" QRP colum in NCJ and edits the QARP ARCI newsletter.

On the schedule for this year's symposium are presentations on antenna feed lines, a low-cost antenna analyzer, alternatives to using printed circuit boards, modern components for homebrew design and construction, coherent CW, and much more. Presenters include such luminaries as Gary Breed, K9AY, George Dobbs, G3RJV, and L. B. Cebik, W4RNL. Last year's event had a standing-room-only crowd of 125, so additional space has been made available this year. Symposium registration is $10 if paid by May 1, and $12 after that date or at the door. To register, send a US check or money order made out to QRP ARCI and an SASE to Cam Bailey, KT3A, FDIM Symposium Registration, Box 173, Mt Wolf, PA 17347; for information, e-mail kt3a@juno.com. Registration includes a copy of the symposium Proceedings. These also will be available for sale during and after the conference.

Other activities include the FDIM QRP Vendor Social on Friday evening and Saturday's QRP building contest sponsored by the NorCal QRP Club. This year's contest will highlight awards for QRP rigs based on the venerable 2N2222 transistor--in honor of the transistor's invention 50 years ago.

For additional details, contact FDIM 98 publicity chairperson Bob Gobrick, N0EB; e-mail rgobrick@worldnet.att.net or visit http://www.qrparci.org.

CLEVIS O. "CLIFF" LAVERTY, W1RWG, SK

Former ARRL New England Vice Director and Maine Section Manager Cliff Laverty, W1RWG, of Norway, Maine, died March 29 following a long illness. He was 80. Laverty served as Maine Section Manager from 1980 until 1987, and as New England Division Vice Director from 1989 until 1991. Laverty also held other field volunteer positions, including Maine Section Traffic Manager. A graduate of the University of Maine and the University of New Hampshire, Laverty was a retired teacher. Previously he worked as a flight radio officer for Pan American Airways and for the military during World War II. He also served as a Merchant Marine radio op and as a telegraph operator for the Boston and Maine Railroad. Laverty belonged to the QCWA and was a longtime member of the Yankee Radio Club in Maine.

ESTHER I. GIVEN, W6BDE, SK

Ham radio columnist Esther I. Given, W6BDE, of Sebastopol, California, died March 13, 1998. She was 86. A New Jersey native raised and educated in Colorado, Given enlisted in the military in 1942 and became a high-speed radio operator. She was one of only 14 WACs especially trained for sea duty, and served as the chief radio operator aboard the US Army hospital ship Chateau Thierry. She was licensed in 1946 and later became a director of the Quarter Century Wireless Association. For many years was a columnist for the QCWA Journal and for Worldradio. In 1997 she received a Distinguished Service Award. Memorial contributions are welcome to the YLRL Scholarship Fund, c/o Marte Wessel, Route 1, Box 73, Liberal, KS 67901.--thanks to Lee Savage, W6AQR, and Brad Wyatt, K6WR

In Brief:

This weekend on the radio: The DXYL-NAYL Contest (SSB), the Florida QSO Party, the Helvetia Contest, the Nebraska QSO Party, the Ontario QSO Party, and the QRP to the Field event are on tap for this weekend. See April QST, pages 102-103, for details. Just ahead: The Connecticut QSO Party, the Massachusetts QSO Party, the ARI International Contest, the Ten-Ten International Net Spring CW QSO Party, the Danish SSTV Contest, and the MARAC County Hunters CW Contest are the weekend of May 2-3. See May QST, page 96, for details.

Vanity update: The FCC in Gettysburg reports it has processed all vanity applications from March 3 through March 23 and is working on the work in process (WIPs) stack. The FCC reports 294 new grants in the latest batch, and 332 WIPs.

FCC assigns RM number, seeks comments on ARRL petition: The FCC has assigned a rulemaking number, RM-9259, to the ARRL's request for an FCC declaratory ruling equating band plan compliance with good amateur practice (see "ARRL asks FCC to support voluntary band plans," The ARRL Letter, Vol 17, No 15). The action is considered a bit unusual since RM numbers generally are assigned only to petitions for rulemaking, not to requests for a declaratory judgment. Comments on the League's request are due to the FCC by May 21. A complete copy of the League's petition may be found on the ARRLWeb at http://www.arrl.org/announce/declreq.pdf.

N9GL to head RF Safety Committee: ARRL President Rod Stafford, W6ROD, has appointed Greg Lapin, N9GL, as chairman of the RF Safety Committee. He succeeds Bill Raskoff, K6SQL. Raskoff, who's served as chairman for several years, is stepping down but will continue to serve as a committee member. Lapin holds a PhD in electrical engineering from Northwestern University and is a member of the IEEE. His e-mail address is glapin@nwu.edu.

March QST Cover Plaque Award: Thomas Kuehl, AC7A, won the March Cover Plaque Award for his article, "Build Efficient Short Vertical Antennas." Congratulations, Thomas!

New astro-hams! US astronauts Winston Scott and Daniel Tani are newly licensed hams. Scott is KD5DXD, and Tani is KD5DXE.

DARA to handle QSLs for October SAREX flight: The Dayton Amateur Radio Association has agreed to handle QSL duties for the SAREX space shuttle STS-95 mission. That's the October flight that will carry once-and-future astronaut John Glenn into space for the first time since the 1960s. Two hams are among the STS-95 crew members.--Rosalie White, WA1STO

The New RTTY Journal debuts: A little more than a year after the demise of Digital Journal (formerly RTTY Journal), Bill Henry, K9GWT, has debuted The New RTTY Journal. Henry, the president of HAL Communications Corp, purchased the assets of the failed publication from Dale Sinner, W6IWO, who published the magazine from 1986 until 1994 and to whom ownership had reverted when the International Digital Radio Association (IDRA) ceased publishing it last year. Until the January 1997 issue, the publication had published continuously for 45 years. Henry says he'll try for a "leaner" magazine, and has suggested a quarterly publication for starters. He called the short issue, Vol 46, No 1, as "the first step in the recovery" of the magazine and expressed hopes to begin regular printing this summer. The introductory price for an annual subscription (four issues) will be $12.00 in the US, Canada, and Mexico and $17 elsewhere. After June 1, the price goes to $15 for US and $20 elswhere. All issues will be sent air mail. Henry says he plans to put out 16-page issues in February, June, August, and November. For more information, contact Bill Henry at HAL Communications Corp, 1201 W Kenyon Rd, Urbana, IL 61801; tel 217-367-7373; e-mail ghenry@halcomm.com; http://www.halcomm.com.

Two-meter TE propagation reported: What could be the first 2-meter transequatorial propagation in the current solar cycle has been reported. JR4ENY/1 reports that on April 16 at 1059 UTC, JH4JPO in Yamaguchi, Japan, monitored the Darwin, Australia, VK8VF CW beacon on 144.480 MHz. The distance involved was approximately 5000 miles. The signal--heard using a TS-790 and a 16-element beam--peaked at 599. The opening lasted until 1125 UTC.--RAC

FCC grants Little LEO licenses: The FCC's International Bureau has granted--subject to certain specified conditions--authorizations to four companies to operate non-voice, non-geostationary mobile-satellite systems in low Earth orbit (NVNG MSS or Little Leo systems). None of the operating frequencies are within amateur bands. Little LEO systems will offer data communications services, including two-way data messaging, vehicle tracking and remote meter reading to earthbound users.--FCC Digest

SARL beams ham radio into classroom: The South African Radio League is taking science and technology into the classrooms of southern Africa with a weekly half-hour shortwave broadcast, Talking Science with Amateur Radio. The program is broadcast to schools Tuesday mornings (7205 kHz) with repeats on Wednesdays, Thursdays, and Fridays. The program is a joint venture of the SARL and the South African Amateur Radio Development Trust and is sponsored by Sentech, the common carrier for broadcasting in South Africa. The program will cover a variety of scientific and technological subjects. Amateur Radio and shortwave listening as educational aids in the classroom also will be

featured.--SARL/SAART

==========
The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Hooray for you Scott,KD5DAS and welcome to the Amateur community. And lots of praise for your 'Elmer' , W5LA. This is amateur radio as it has always been and should be. You will find a few losers out there as well such as the little demented Japanese boy called "cutie Boy". Most of us just laugh at his antics in the hope that someday he too will grow up . In the meantime ,enjoy the hobby and if there is any way that I can help you with the hobby, let me know. 73 and the best....
Lee St.Clair W7AX in Montana..

>having trouble getting power and finding a place to mount the radio.

A couple of us with '96 Corsicas had the same problem. Got through the firewall okay on the 94 Corsica, but it's too busy under the hood on later models.

The solution: Took the vehicles to an auto audio shop. They ran a high current line into the vehicle and terminated it under the front seat in mine, under the dash in another. They did a great job. Cost: $40 to $45 for parts and labor.

Paul K5PF

How did I get into HAM RADIO? It took me a long time to finally get around to getting a licence. I used to watch the HAM stations that would operate at various boy scout camps when I was a kid. Though the mode that got my facination was RTTY. I'm not much of a talker. And, this was before the availability of home computers.

But, as it was my parents were fiercely opposed to HAM radio, so I wasn't allowed to pursue it. And, eventually home computers materialized and took up most of my time.

Years earlier I had chatted with people I couldn't see on a terminal at my dad's office....and the idea that with RTTY the person could be on the other side of the world was intriguing.

Years after I left home....a friend who was into computers a lot got his ham licence...and stirred up the interest that I had in doing it. Though the fad of the time was packet and NOS.....which seemed interesting because I first brought the Internet to Medicine Hat....and it was costing me $1500-$2500 a month in long distance bills to do it. Packet was fun for a while....I even ran the local packet BBS (F6FBB + JNOS under a BPQ switch) for a couple years (the locals took the machine back with plans to setup an Internet gateway on it, but they never got it off the ground).

But, being that I was heavy into volunteer work...the public service side of Amateur radio replaced my original interest. And, this is where I became most active. I also did one real emergency....Medicine Hat Floodwatch '95.....it all started on Thursday noon, when the police started the callout and I went to the Red Cross for assignment....I was sent to establish communications at the backup evacuation center. And, then the rest of the flood I was just at the Red Cross center with the regional coordinator....

One of our favourite parts was after the cellular system crashed....which we kept telling the city EC wasn't going to be reliable during a real disaster, and he finally admitted that we were right.....and the phone company was coordinating the repair and upgrade of cell sites over amateur radio.

If I remember correctly, three local hams work for the phone company, plus the guy that came down from Calgary to do the work is a ham.

Actually, I haven't been very active since last summer when I helped with the Bike for Breath race (I worked one of the check points....I wasn't crazy enough to try riding a bike around the whole course with radio....which Bob VE6QOR did). Maybe after I get settled after my upcoming move I'll try to get back into it....depends on how long it takes for me to get around to getting an FCC license (moving from Alberta to Ohio).

Lawrence

Aint that the truth. I do belive that its the same everywhere in the US government. Get as much money as you can and do as little as possible. The only thing I think we can do is write our Congressman and Senator and let them know about the crummy job the FCC is doing. Have you seen you phone bill? I just got a letter telling me they wanted to know if they could add another 10 bucs on my phone bill. Take a look at your phone bill. Here in my county they just raised sales tax to fund a new 911 system. Geuss what I pay $3.11 a month for 911 access so where did my tax money go? Just another example of those in the FCC rapeing the American public. So its not only in enforcment of The ham bands but everything the FCC touchs costs us the tax payer more money. Here is another one for you look at your cable bill its gone nothing but UP! They even promised us that it would cost less money, just another lie out of washington. Here is anotherone for you after the fcc seizes CB equipment some of them turn right around and sell it back to pulbic. Not nessacarly hams if you get my drift. We have a FCC offical, who will remain nameless, pulled seized equipment out of the dumpster and resold it. This guy worked right out of the powder springs listening post. This same offical would inform certain CB radio operators that The FCC was going to make a bust in their area. The FCC wants to give these guys access to mine and yours SSN. I think before the FCC does anything I think they need to clean up their own act.

Hello. This is to follow up someone's article.

I would like to mention that I will post no more articles regarding to code/nocode etc. articles as you will try to shut my voice down by force.

I remember many people who expressed themselves here were removed by those who were inconsiderate (CB Rambo, Malissa etc. who eventually disappeared). If one disagrees with the majority, h/she must be removed from us.

Unfortunately, it seems it is going to happen the same thing for myself. Not mentioning Mr. Burt. As far as I know, his account is also almost cancelled.

Just you be alone. We don't care. If you want to feel superior over others and if you think you are the best person in the world, feel so. We just don't care. Maybe you will have a few friends. Not many.

Remove us. Remove everyone. You are alone as always.

-> No follow ups wanted. <-

This is my last message. (don't say anything here. it's not funny.)

PS: If your point is to cancel my access to ISP like you have done to the others, you are wasting your time. I already forwarded my actions to be done to my ISP as well as domain providers. You must be an idiot if you think you can shut my account down by saying you don't want to see the article that you don't agree (my opinion is highly relevant and no spamming as long as the content is concerned. I don't post xxx binaries here).

ARRL Bulletin 27 ARLB027
From ARRL Headquarters
Newington CT April 24, 1998
To all radio amateurs

SB QST ARL ARLB027
ARLB027 League supports lower vanity fee schedule

The ARRL says it supports the proposed lower fee to obtain a vanity call sign. The FCC proposed recently in its fiscal year 1998 fee schedule that vanity filers would pay just 12 dollar(s).90 for the ten year term, once the new schedule goes into effect later this year. That's the lowest fee in the history of the vanity program. Originally, vanity applicants paid 30 dollar(s) for the privilege of selecting a specific
call sign. The fee jumped to 50 dollar(s) in September of 1997, just in time for Gate 3 filers but not in time for Gate 4 filers to take advantage of the 30 dollar(s) fee.

In comments filed April 22 with the FCC, the League called the wide variation in fees over the life of the vanity program ''clearly inequitable'' and said the FCC should have handled the matter differently. The League called the proposed 12 dollar(s).90 fee ''reasonable''
and urged its adoption ''as soon as possible.''

QST de W1AW
ARRL Bulletin 28 ARLB028
From ARRL Headquarters
Newington CT April 24, 1998
To all radio amateurs

SB QST ARL ARLB028
ARLB028 FCC assigns RM number, seeks comments on ARRL petition

The FCC has assigned a rulemaking number, RM-9259, to the ARRL's request for an FCC declaratory ruling equating band plan compliance with good amateur practice. The action is considered a bit unusual since RM numbers generally are assigned only to petitions for rulemaking, not to requests for a declaratory judgment.

The League's April 3 request asks the FCC to affirm that amateur operation that conflicts with established voluntary band plans and causes interference or adversely affects those operating in accordance with applicable band plans would violate FCC rules. The ARRL wants the FCC to acknowledge that hams should be familiar with--and should abide by--voluntary band plans applicable to the bands they operate and to state that those who don't operate in harmony with those plans are not operating ''in accord with good amateur practice.''

Comments on the League's request are due to the FCC by May 21. A complete copy of the League's petition may be found on the ARRLWeb at http://www.arrl.org/announce/declreq.pdf.

To all radio amateurs

SB PROP ARL ARLP017
ARLP017 Propagation de KH6BZF

Solar activity continues it's downward trend this week with the possiblity of a 27.5 day cyclic bottom in the mid to high 80's centered around the 26th to 27th of April. Average sunspot numbers were down this week from last week's report, and the average solar flux was down to a daily mean of 100.6.

Wednesday's Solar Flux at 2000UTC was 87.6. The Solar Flux peaked this month on April 8th at 140.6 level at 2000UTC. The previous high level in this rotational sub cycle was on March 15th of this year, at 141.8 at 1700UTC.

Solar flux for this weekend, Friday through Sunday, is forecast at the mid to high 80's with the return to the East limb of the visable disk of several previously active regions. Look for some DX activity on 10, 12 and 15 meters.

Next week look for flux values to drift slightly upward from mid to upper 90's. Look for some unsettled conditions centered around April 24th and again around May 8th. One cannot predict solar pertubations or sudden active occurances. But, always ''expect the unexpected, and expect the expected''.

Now that the solar activity is slightly lower than in early April, 10 meters should be opening for a shorter period with fair north south paths and an occasional north south, possibly on 6 meters as well. Check 10 meters at 10AM local time, as I always say, ''check 10 at 10''.

For the 30 meter band it is expected to be open to somewhere at any hour. The only drawback for this band is QRN/QRM from some of the 6,000 lightning strikes every minute, worldwide, according to NASA data. Ditto for 40 meters, however some DXpeditions are succeeding on the low bands. The low bands are always worth checking on the

gray and night time path.

For 20 meters occasional worldwide openings during a 24 hr period with some polar paths open after Sunset to EU, Asia, with good JA openings from the east coast. However, there was a Satellite Proton Event beginning on 20/1400UTC with a Polar Cap Absorption beginning 20/1615UTC and is expected to continue in progress through Friday.

Also 17, 15 and 12 meters have had occasional worldwide openings over the daylight paths as daylight hours are extended in the northern hemisphere and shorter in the southern hemisphere.

Sunspot Numbers for April 15th through 21st were 79, 59, 70, 28, 35, 35, and 47 with a mean of 50.4, lower than last week. The 10.7 cm flux levels were 112.7, 106.4, 101.3, 98.5, 95.8, 97.7 and 92.0 with a mean of 100.6, also lower than last week's report. The Alpha planetary indices were 04, 07, 15, 06, 04, 10 and 07, with a mean of 7.57.

Tad, K7VVV, will be back from his Maui honeymoon next week and we hope he'll be up and around for more of his data and stats. Thanks for the opportunity.

ARLX003 Clevis O. ''Cliff'' Laverty, W1RWG, SK

The ARRL has received word that Former ARRL New England Vice Director
and Maine Section Manager Cliff Laverty, W1RWG, of Norway, Maine,
died March 29 following a long illness. He was 80.

Laverty served as Maine Section Manager from 1980 until 1987, and as
New England Division Vice Director from 1989 until 1991. Laverty also
held other field volunteer positions, including Maine Section Traffic
Manager.

A graduate of the University of Maine and the University of New
Hampshire, Laverty was a retired teacher. Previously he worked as a
flight radio officer for Pan American Airways and for the military
during World War II. He also served as a Merchant Marine radio op and
as a telegraph operator for the Boston and Maine Railroad. Laverty
belonged to the QCWA and was a longtime member of the Yankee Radio
Club in Maine.

ARRL Bulletin 29 ARLB029
From ARRL Headquarters
Newington CT April 24, 1998
To all radio amateurs

SB QST ARL ARLB029
ARLB029 Colvin Award to Swiss-led group for 3B7 DXpedition

An international group has received an ARRL Colvin Award grant to help fund a DXpedition to St Brandon (Cargados Islands) planned for May. St Brandon is part of the Republic of Mauritius in the Indian Ocean and is number 17 on the most-wanted list of DXCC entities. The ARRL Colvin Award Grants Committee voted to grant the Canton of Zug branch of the Union of Swiss Short-Wave Amateurs 5000 dollar(s) for the DXpedition. The group, under the leadership of Karl Graetzer, HB9JAI, has additional financial and in-kind support from Yaesu and Cushcraft, as well as from various DX clubs and commercial sponsors.

''We are very happy to have the contribution of the Colvin Award,'' Graetzer said this week. ''It will help a lot.''

Graetzer says all preparations have been completed and the team now is busy with flight cargo, customs formalities, and other activities. The group plans to arrive by boat on May 6 (gear will be ferried to shore by small boats) and to operate as 3B7RF from May 7 until May 17. Operation is expected to be continuous on all bands, including VHF, depending on propagation. Modes will include CW, SSB, RTTY and SSTV. Two individual sites will be set up with four operating positions. Fifteen operators from Switzerland, the US, Japan, and Israel will share on-the-air duties.

More information on the St Brandon DXpedition is available at http://www.3b7-brandon.ch.

Well Mr. Dickson, while Cutie Boy may have a few screws loose and has, in my humble opinion, viewpoints which are far enough in orbit they deserve to have NASA elements on them. I don't care for the guy and think he's quite childish in nature for someone attending a University. He is however, far from abusive. I would not want everyone running to my ISP customer service dept. because they disagree with my views, would you?

Hello. This is to follow up someone's article.

I would like to mention that I will post no more articles regarding to code/nocode etc. articles as you will try to shut my voice down by force.

I remember many people who expressed themselves here were removed by those who were inconsiderate (CB Rambo, Malissa etc. who eventually disappeared). If one disagrees with the majority, h/she must be removed from us.

Unfortunately, it seems it is going to happen the same thing for myself. Not mentioning Mr. Burt. As far as I know, his account is also almost cancelled.

Just you be alone. We don't care. If you want to feel superior over others and if you think you are the best person in the world, feel so. We just don't care. Maybe you will have a few friends. Not many.

Remove us. Remove everyone. You are alone as always.

-> No follow ups wanted. <-

This is my last message. (don't say anything here. it's not funny.)

PS: If your point is to cancel my access to ISP like you have done to the others, you are wasting your time. I already forwarded my actions to be done to my ISP as well as domain providers. You must be an idiot if you think you can shut my account down by saying you don't want to see the article that you don't agree (my opinion is highly relevant and no spamming as long as the content is concerned. I don't post xxx binaries here).

I'm helping set up my university's club station, and have a few questions.

What are the operating practices limited to on the club station.
Specifically, what license class does one assume while operating the club
station?

Personally, I think it should be the class of whoever is the control
operator. At the most, the highest license holder present in the shack.
Can the station trustee be the control operator, even while not present?
Ex: Could a no-code technician operate an HF rig at the club shack without
anyone present? Could a general class licensee operate in the Extra portion
of a band without anyone else present? (the trustee IS an extra class
lisensee)

Our first club meeting was this afternoon, and we only had three people show
up. We've just barely got our station setup. We have some pretty nice HF
equipment (IC775, TH11DXS up 60' on a 3 story building), but no VHF/UHF
equipment donated yet. I think it's going to be kinda hard to stir up a
bunch of students to study the 13/20wpm code. I wish they had some satelite
stuff donated first, at least then the no-coders could operate.

hi dave i have a ft980 in the repair shop. the warble is because you need to net the sideband cristol back on frequency. their are trimmer capacitors to do this ..
a frequency counter can help you get it more exact. as far as no output. atleast 3 possable causes. pre driver transistors, driver transistors, or finals. the pre drivers in a matched set are about $15.00. the drivers in a matches set are about $20.00. the matched set of finals are between $110.00 and $165.00 it depends on which ones are in the rig. i have a ft980 in a repair shop now trying to get it going. so far my bill is over $400.00 and still going. someone sure butchered it and i did not know until it got in trouble. good luck with the project. i think the finals are matched mrf422 transistors. the service shop is about 200 miles south of me. i have done a lot of driving back and forth. 73 s kw9x jim.

-What are the operating practices limited to on the club station.
-Specifically, what license class does one assume while operating the club
-station?

Read over part 97. Note that the control operator MUST be present
at the control point at all times when transmitting. One may use the
privileges granted by his license or that of the control operator.
There are special ID rules used when the control op has a higher class
license than the station licensee and is using those privileges.
You also have to take third-party rules into account when operating outside
your license class.

>lisensee)
>
>

Andy:
Here is some information which you should find helpful. I'll also throw in a bit of Amateur trivia.

First, you are correct about the club station. One cannot exceed his personal license class restrictions, even though the club call may be held by an Extra. However, if the Extra is present and is serving as a control operator that is a different story.

Which brings up the trivia question: When is an Amateur radio operator considered to be "Third Party Traffic"? Answer, when he is exceeding his operating privl. under another's control; i.e., operating in the Extra portion of the band while the Extra is serving as the control operator. Most hams think that Third Party traffic refers only to unlicensed persons who speak over a ham radio setup or autopatch. They don't realize that a licensed person can be Third Party Traffic. Try this brain teaser at your next club meeting. It comes straight from the FCC Rules and Regulations Handbook.

As an interesting side note, all of this applies to Field Day operations, as well as to club stations.

Can the station trustee be the Control Operator when not present? No. The FCC is quite specific on this point.

Hope that answers your questions. And good luck with the club!

73,
Paul K5PF

You MAY wish to rethink about the ARRL site. They too now list others. I as recently as today, have seen them advertising exams given by groups going through W5YI. Maybe others as well. They started this about a year ago. When I was an ACTIVE (monthly examiner), I was asked to submit my schedule to W5YI for submission to the ARRL's list.

So, give it another try.....

Lou

-
Here is a summary of news items covered on edition #265 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 1-May:
-
1. Mir Works Massachusetts School, Two More QSOs Scheduled
2. Dayton ARA to Handle QSLs for John Glenn's STS-95 Mission
3. ARRL Supports Lower Vanity Fee Schedule
4. FCC Cranking Out New Vanity Call Signs with 30 Day Lead Time
5. Next Month's 3B7RF DXpedition Gets $5,000 Colvin Award Grant
6. FCC Assigns RM-9259 to ARRL "Good Amateur Practice" Request
7. Greg Lapin, N9GL, Gets ARRL RF Safety Appointment
8. RAC Appoints John Simpson, VE3NJU to Joint EMC Committee
9. Joe Craig, VO1NA, Elected RAC Newfoundland and Labrador SM
10. "The New RTTY Journal" Debuts a Leaner Look
11. Special Event Station Calendar
12. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
13. "The RAIN Report" from Chicago
14. Weekly Propagation Forecast
15. "Packet's Best Kept Secrets" with Bill Baran, N2FNH
16. "This Week" to Venture to Dayton and Wyoming Conventions
-
Transmission and production expenses have been underwritten by a
grant from Ray Clare, KB0QDF, of Brooklyn Center, Minnesota,
where "This Week in Amateur Radio" is heard live via satellite
every Saturday evening at 8:00 PM as part of the "Saturday Ham
Talk Net" on the WB0BWL and N0BVE repeaters serving the Twin
Cities area on 53.45, 145.21, 145.45, and 444.0 MHz. Uplink
costs paid to the W0KIE Satellite Network have been underwritten
by a grant from Mike Reed, N7ZEF, of Sinclair, Wyoming.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up to 12.031
```

GHz. Program audio is on the 6.2 MHz analog subcarrier.
-
On the WorldWide Web, program audio can now be found in several formats (including streaming audio) at http://www.roava.net/twiar through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA; at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN; and at http://www.ionet.net/~michaelr provided by Mike Reynolds, W0KIE. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Here in the Capital District, "This Week in Amateur Radio" is heard on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz, courtesy of the Niagara-Mohawk Amateur Radio Club. The program is repeated Mondays at 8:00 PM.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, W2XBS, at 518.283.3665 (packet @ WA2UMX.FN32AW.NY.USA.NA or email kxkvi@delphi.com) or Stephan Anderman, K2SMA, at 518.664.6809 (packet @ N2TY.FN32DW.NY.USA.NA or email sanderman@delphi.com).

I have a small FM transmitter which I use within the confines of my home...it's a small one from Radio Shack, and it draws about 11 mA at 3 V. I already boosted the signal by attaching bunny ears to the paltry antenna that was supplied. However, it only gives good reception for a couple hours in the extremeties of the range (where I'm interested in...) Is there any way that I can plug it into the wall? I know there are voltage selector transformers at Radio Shack, but it takes two AAA's...is there an adapter around for that? If not, how can I hook it up?

TIA

Brown Bros. Machine Co. Paddle/Keys. I have one Model CTL and one Model CTL-B for sale. These legendary precision-made units both feature a twin-lever keyer paddle and a heavy-duty straight key on the same base. They have become collectors' items.

The frame and base of both units are finished in baked black wrinkle enamel. The mechanisms are in perfect condition. The bases show some wear, with chips in the enamel finish, mainly along the edges. The base of the CTL has very few chips; the CTL-B has more chips.

The Model CTL is $200. The Model CTL-B is $190. Add $10 shipping/insurance for each unit.

Please e-mail: jeff@detray.com or phone: 603-242-7995. Jeff NK1F.

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I am looking at taking my Tech-Plus test sometime in the near future. I would therefore like some information about a good starter radio to begin with. It does not have to be solid state, tubes are fine. I do not want to spend too much money at the moment. I would like a radio that covers the bands which Tech Plus allows or at least the bands which tech covers minus CW. I am mainly looking at getting a base model radio.

Any information from anyone would be greatly appreciated. If you have something for sale that might fit the bill , let me know.

I would also be interested in homebrew equipment or plans to construct a radio.

Thanks,

Chris

73's from Hawaii...wonder If anyone out there done business with these people?
I have a sick AMP Supply LK500NT that blew the relay...blew another one just a couple of minutes after installation. Obvious problem beyond my abilities (don't want to get zapped!)...have to ship this thing all the way to N.C.
Any suggestions or referrals will be appreciated deeply gang!

Chris:

Any number of rigs probably will work just fine for you. For my money I
favor the Kenwood TS-830S. All solid state except a common 12BY7A
driver
and two robust 6146B finals. I have had one about a year and a half and
love it ! I am a Tech+ just moving on to General/Advanced as soon as I
take the 13wpm cw test (May 2, hopefully) but had sort of a good
electronics
knowledge when I started (lic. in April 97) so most of the rigs features
were
not foreign to me. Not that it's a difficult rig to learn (IMHO)....
but if
you get one work with it and see if you can find an Elmer who has
knowledge
of one to help you. The TS-830S has a very "hot" rx section and 100
watts
output (actually in tune and with good tubes 100 to 125 on mine
depending on
the band). This rig gives up little (if anything) to most modern rigs
except
DSP.... Elmer's are not real hard to find for the 830 (or for that
matter any
of the X30's - 530,830,930) seems like most hams had one at one
time..... and
if they still don't they regret selling it <grin>. Only thing is you
have to
get used to tuning when you change freq a few khz.... but then thats
really no
trouble for me and it's a fact of live with all tube final rigs (or
amps).

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <635>
.....
>From the Editor's Desk:

FEMA has developed an on-line Basic Incident Command Couse on the Internet! We probably have more requests for Basic ICS training than any other course, and we thank FEMA for their efforts toward providing the latest in a series of worthwhile emergency services training courses. For details, see below.

Steven Kuhr from New York has compiled a list of related newsgroups and mailing
lists; there's a lot of information to which you can subscribe.

We are in the process of establishing an ACS Emergency Response Institute for the Southern California area! We're in the process of selecting staff officers,
and we hope to have ERI - South up and running this fall. Stay tuned for further
details.

Finally, Stan Harter's Condolence Gustbook will be open for one more week at: http://www.garlic.com/oes/harter.htm

Stay safe, everybody, and have a great week! -- Dave Larton
.....

>From the mailbag:

From: jerhun@juno.com (Jerry L HUNSAKER)

Dave:
I am one of the EOC/RACES operations that is assigned to the Buena Park EOC. We have two EOC's located in the city. Mine is located in the police department basement and the secondary one is located in the Orange County Fire Station 61 adjacent to Knots Berry Farm. We have HF, VHF, ATV, Packet and the city has given us a mobile van which has all of the above equipment. My problem is that we need assistance from any group which has working SOP's or Forms that could enable us to work more efficiently. Please excuse me for my military jargon but after 25 years in military command post from HQ SAC to Bangkok my terminology is strictly military. But what we need is some suggestions and aid which could make our operations more efficient, for someone who has no experience in an EOC. Any help will be appreciated.

They can contact me via EMAIL at jerhun@juno.com. Also you may edit this letter to fit your ACS newsletter. Which I find very helpful. By the way this is the second time we have invited you to visit our EOC's Our Communications Officer has also invited you earlier. So when you are in the Buena Park area please feel that you are welcome to visit us.

Jerry KC6TQY

(Hi, Jerry: I know you'll get quite a bit of email from our subscribers, with helpful suggestions that will really benefit your program. And, I havent forgotten
your invitation to come down and see you. As you can imagine, things are pretty busy
here... I'll take you up on the offer sometime this summer! - Dave Larton)
.....
Training:

FEMA's Emergency Management Institute (EMI) has released a new Independent Study Course, #195, Basic ICS: Incident Command System. It is the first in a series of new multi-discipline ICS Courses being developed and released by EMI.

The course is designed as an introduction to the concepts and principles of ICS. Topics covered include an Introduction to ICS, Command and General Staff, Incident Facilities, Resource Management, and ICS Assignments. Training is available to groups as well as individuals.

The EMI Independent Study Course is based on the National Interagency Incident Management System (NIIMS) National Training Curriculum (NTC) Modules 1-6. Content is generally equivalent to what is known as NIIMS level I-100 and I-200 training.

This course may be ordered from :

Independent Study Program Office
Emergency Management Institute
16825 S. Seton Avenue
Emmitsburg, MD 21727.

You may also register for the course or download it from the FEMA web site:
www.fema.gov/emi/ishome.htm

The entire course can be downloaded from the site, and requires an Adobe ACROBAT reader, which is also available from the site. The final 50 question exam can be taken on the Internet for submission to FEMA for credit.
.....
What's New on the Web:

Below is a brief compilation of Internet mail-lists and newsgroups and WWW sites which are related to emergency management and EMS. This is forwarded for your convenience and use.
==========
1. The Emergency Information Infrastructure Partnership (EIIP) home page has been added because the mission of EIIP is networking and communications among emergency management professionals. There are various ways to network through EIIP including newsgroups and scheduled chat rooms. Point your browsers to http://www.emforum.org/

2. Our close friends at mediccom.org, owners and operators of MCI-Talk, HazMed, Terrorism, and others, have a great home page. Check it out. http://mediccom.org/

3. A fire officer up in North Vancouver, Canada has started a great emergency services page with netwrking capabilities and registry of emergency professionals. This list boasts a fine search capability to located individuals who have registered. Sign on at http://www.district.north-van.bc.ca/admin/depart/fire/ffsearch/mainmenu.cfm
==========
LOCAL EMERGENCY MANAGEMENT LIST

A new Internet discussion mailing list is now available for those concered with municipal and county level emergency management. The EMERGENCY-MANAGEMENT list is available to anyone interested in protection of local communities from hazards and resulting emergencies.

This is the first such list targeting local emergency management needs, interests and concerns.

To subscribe, send email to:

LISTSERV@LISTSERV.AOL.COM

Subject: No Subject

Message: SUBSCRIBE EMERGENCY-MANAGEMENT <your real name>

Postings go to emergency-management@LISTSERV.AOL.COM

The list is owned by Public Safety America...America Online's new all-public safety information service. You do not need to be an AOL member to subscribe to the EMERGENCY-MANAGEMENT list.
==========
DISASTER-L
The DISASTER-L list focuses on disaster preparedness,

recovery, and survival. We cover El Ni&#65533;o, earthquakes, hurricanes, tornados, earth changes, and other natural as well as man-made disasters.

To subscribe: send "subscribe DISASTER-L" to:
majordomo@sonic.net.
==========
A mailing list called HAZMIT has been established for the
global hazard mitigation community. The list is in English and
both natural and artificial disasters will be covered.
To subscribe send the command SUBSCRIBE in either the subject
or body of a message to:
hazmit-request@mitigation.com
As an alternative, you may subscribe by pointing your Web browser to
http://www.mitigation.com/listserv.htm
and filling out a brief form (organization name and email address).

==========
MCI-Talk: An MCI management mail list.
The discussions are centered around Incident Command,
Incident Management, and medical disaster command and
control.

To subscribe send e-mail to:
listserv@mediccom.org

no subject is needed
In the body of the text write subscribe mci-talk <your name>
Postings go to MCI-Talk@mediccom.org
==========
Terrorism: A terrorism discussion mail list.
The discussions are centered around contemporary issues
surrounding terrorism.

To subscribe send e-mail to:
listserv@mediccom.org

no subject is needed
In the body of the text write subscribe terrorism <your name>
Postings go to terrorism@mediccom.org
==========
DISMED: Disaster medical management issues and discussion.

To subscribe send e-mail to:
listserv@mediccom.org

no subject is needed
In the body of the text write subscribe dismed <your name>
Postings go to dismed@mediccom.org
==========
SITREPS: Situation reports from disaster posted by various
emergency related agencies including FEMA and NDMS.

To subscribe send e-mail to:
listserv@mediccom.org

no subject is needed
In the body of the text write subscribe sitrep <your name>
Postings go to sitrep@mediccom.org
==========
DISASTER TOPICS
These lists are intended for discussion on the topics listed accordingly
but they are not very active.

LIST ADDRESS TOPIC
DIS-med@website.tamc.amedd.army.mil: Disaster medical
DIS-com@website.tamc.amedd.army.mil: Disaster communications
DIS-mgt@website.tamc.amedd.army.mil: Disaster management
DIS-terr@website.tamc.amedd.army.mil: Disaster terrorism

The addresses are for subscribing as well as postings. To subscribe to
the any of the list: listname@website.tamc.amedd.army.mil

No topic is needed but in the body of the text write:
subscribe your name
==========
THE INTERNATIONAL EMS LEADERSHIP DISCUSSION GROUP
(owned by Brian Maguire)
To subscribe send e-mail to: listserv@gwuvm.gwu.edu
no subject is needed
In the body of the text write: subscribe emslead <your name>
Postings go to emslead@gwuvm.gwu.edu
==========
NETWORKS IN EMERGENCY MANAGEMENT

An international discussion list on emergency management
issues (Mostly communications issues).
To subscribe send e-mail to: majordomo@sfu.ca
No entry is needed in the subject area. In the body of the
text write: subscribe nets-em <your name>
The address to send postings once you have subscribed is:
nets-em@sfu.ca
==========
The Search and Rescue Discussion List

This list is intended for discussion on issues surrounding
varying Search and Rescue topics. USAR and wilderness SAR
are among them.

To subscribe send e-mail to: sar-L-request@islandnet.com
No entry is needed in the subject area
In the body of the text write: subscribe sar-L
Postings then go to: sar-L@islandnet.com
==========
STATE OF NEW YOURK DEPARTMENT OF HEALTH
EMERGENCY MEDICAL SERVICE NETWORK

A New York State operated discussion list. This list is
moderated by John Lewis of the NYS/DOH/EMS office to ensure
the propriety of the messages.

To subscribe, send email to: LISTSERV@HEALTH.STATE.NY.US
No entry is needed in the subject area
In the body of the text write:
subscribe EMSNY-L <your name>
The address to send postings once you have subscribed is:
EMSNY-L@health.state.ny.us
==========
FEMA Newslist

This is a newslist managed by the FEMA Emergency
Information Information and Public Affairs Office (EIPA).

To subscribe, send email to:
majordomo@fema.gov
no subject needed.
In the body of the text write:
subscribe news
Unlike the other lists, this is not a discussion network;
it's a FEMA news release wire. The info, including
press releases and situation reports (sit reps) is
quite informative.
==========
FEMA Situation Reports (SitReps)

To subscribe, send email to:
majordomo@fema.gov
no subject needed.
In the body of the text write:
subscribe sitrep

Unlike the other lists, this is not a discussion
network only disaster sitreps which are quite
informative.
==========
DISASTER RESEARCH
This is a weekly or bi-weekly electronic newsletter
publication called Disaster Research. It is published by
the Natural Hazards Center at Colorado University. You can
contribute to the newsletter by simply sending in postings.

To subscribe, send email to: listproc@lists.colorado.edu
No subject needed
In the body of the text write: subscribe hazards <your name>
Messages and postings get sent to hazctr@spot.colorado.edu

(Colorado Univ. also has a free bi-monthly regular newsletter
called the Natural Hazards Observer. Email JClark@spot.colorado.edu to
subscribe to the regular newsletter. She <Janet Clark> will need your
home address, etc. Both of these newsletters offer a nice insight into

current trends in emergency management.)
==
TROPICAL STORM TRACKING and REPORTS
This list gives you active tropical weather reports from the
National Hurricane Center. The reports are quite frequent
and abundant so I suggest that you subscribe only during an
active storm in order to avoid e-mail meltdown.

To subscribe sent e-mail to: listserv@vmd.cso.uiuc.edu
No subject is needed
Postings go to tropl@vmd.cso.uiuc.edu
==
STORM -- Hurricane Tracking and Information during active hurricanes

Send e-mail to Majordomo@lists.cimedia.net with the following
command in the body of your email message: subscribe storm

==
**** NOTE ****
Once you subscribe to any mail list, the listserver will
automatically send you an instruction sheet of how to
function on the mail list. DONT DISCARD THESE INSTRUCTION
SHEETS; HOLD THEM FOR REFERENCE !

....

This week's EMCOMM Bulletin:

EMC129 A Tsunami True Event 2/2 For release 4/28/98

The young cadet had just replied, saying:
"No. No." she repeated softly, "We don't know anything about that. Captain Davis is not here right now, and the other cadets are outside practicing for the drill team competition. Over."

"Please warn everyone to get out. Now! The ETA is about 50 minutes. Just get out! Now!. This is Firebrand 19 over and out!" I put as much urgency as I could muster for that soft-spoken Hawaiian girl.

The rest was history. The girl and another young man/cadet jumped into the red-light and siren-equipped CAP Jeep and raced up and down the small valley community warning everyone to get out immediately. "Tsunami coming! Tsunami coming! Hele on, hele on! Wiki wiki!"

Everyone got out of the valley to safety -- just in the nick of time. What had happened? Why was there no other warning? It was subsequently learned that a bread or milk truck driving north from Lihue towards Hanalei a little before 4 a.m. skidded off the slick pavement into a telephone pole. The accident severed all telephone lines north, including the siren control pairs.

When the telephone outage was discovered, a police officer sped 35 miles to Hanalei. The tsunami slammed into Hanalei while the officer was still six miles away. He found all the residents safe at what is now the site of the Princeville resort.

Two days later I stood with Kauai C.D. Administrator Manuel Medeiros at the Hanalei lookout, 90 feet above the ocean. We stared at the evidence of the waterline 30 feet _above_ us on the bank. Nothing remained in Hanalei. The bridge was gone. From the CAP reconnaissance plane, we saw destroyed coconut plantations, concrete slabs, perhaps a few bathtubs, but mostly just pipes rising out of the concrete.

The people of Hanalei valley were saved by two-way radio and two teenage CAP cadets who knew what to do. They were later honored at a Congressional banquet in Washington, D.C."

End of a true experience from the life of Stanly Harter. Stan was born in San Francisco and educated in criminology and electronics. His experiences included emergency management, broadcast journalism, law enforcement, fire suppression, consulting, search and rescue and frequency coordination and public safety communications. Stan was Assistant Director of Civil Defense and chief of Hawaii State government telecommunications from 1962-1982. From 1982-85 he worked in Kern County, CA. In 1985 he became the California State OES coordinator for the Auxiliary Communications Service and the EAS programs.

Stan consulted nationwide to assist governments in creating, managing and utilizing emergency communications units using the FCC Amateur Radio Service licensee and others. He was

active in the Civil Air Patrol since l951.

Stan passed beyond the veil of this physical world April 2, l998 after leaving the office in a state van at 10 pm. He was parking the van in front of his home in Sacramento when he had a massive heart attack.

Stan was a dedicated believer in the volunteers who serve our fellow humans in whatever capacity they may do so. Many felt the brush of his ideas, interest, humor and beliefs. We are saddened at his going, but through those of us whose lives he touched, his endeavors live on.

Farewell, Stan. We remember you well.

Hi

Are there any Hams who are travelling to Billing Aquadrome, Landrovers 50th Anniversary Event in July who would like to meet up with a couple of fellow Landrover mad radio hams.

We live in South Yorkshire, England and are looking for like minded people to travel down to Northampton and chat on the radio. (or CB if prefered) We have 2 kids so are also looking for company or someone for the kids to play with while at the event.

Please reply via email

YAESU Coax Cabls for HF Rigs

I am looking for a complete RF coax cable, the type which Yaesu uses for transferring RF between the PCBs in their HF rigs. The cable is coax about 5mm diameter and has 2 mini-coax plugs on it. The cable itself must be about 30cm in length.

According to the local Yaesu dealer, these are not standard spare parts. I can buy similar cable, but not the male plugs which are connected on the ends by some crimping process.

As I am sure that I am not the first to run into this problem I wiould like to hear from others what they do, or where they buy, such finished cables.

Sorry Chris, the only advice I can give you is more practice. There is no mystery to learning the code. It requires work. 5 wpm is really just knowing the characters. If the numbers are giving you a hard time, practice the numbers more. Don't be discouraged if you don't make it the first time. Just practice some more and take it again, then get on the air and use your new code skills.

73,

Mike

Our hobby has become under political attack much like gun
owners have. It just seems like the Clinton administration
has to politize every area of human living. Hopefully this
is just a phase our country is going thru.

I have noticed one thing. It seems that most agencies are
more interested in making regulations than enforcement. Look
at how the FAA has let Air Traffic Control go down hill, especially
the equipment. The founders had the insight to have seperation
of powers. Maybe it is time that enforcement is seperated from
regulatory powers. Let the law enforcement agencies (Secret Service,
FBI, and US Marshalls) do the enforcement. After all, what does
the EPA and the Energy Department have need for SWAT teams?

I am trying to program my FT-50 to work AO-27 as described in QST a few months ago. The problem is, I can't figure out how to make cross-band split memories. No where is this described in the manual. How can I create a memory channel with a 2M transmit frequency and a 70cm receive frequency? I have tried using the VFO-duplex mode, but that is cumbersome, to says the least, when it comes time to correct for doppler.

***** DON'T PANIC!!!! *****

***** READ ENTIRE MESSAGE FIRST!!!! *****

The following message is an announcement of a 30-day discussion period on news.groups to precede a non-binding opinion poll which, depending on the results, MAY lead to a formal Request for Discussion (RFD) to reorganize the rec.radio.amateur.* newsgroups. NO VOTES ARE BEING TAKEN AT THIS TIME, and any binding vote that affects the rec.radio.amateur.* newsgroups will not occur for many months into the future, if at all. Please read the entire announcement carefully before replying or following up.

rec.radio.amateur.* Vote of Confidence

Contents:

Q: Who is doing this?
Q: How may I join the rra-wg?
Q: Why are we doing this?
Q: What are we doing?
Q: More to the point, why are we "kicking over this hornet's nest?"
Q: Why do you want to change the newsgroups again?
Q: Who are you to tell us what to do with "our" newsgroup?
Q: How long ago were each of the rec.radio.amateur.* newsgroups created?
Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and rec.radio.swap included in this proposed opinion poll?
Q: Where can I obtain a copy of the original newsgroup charters?
Q: Where can I find out more information about the Usenet RFD/CFV process?
Q: I don't want any of the newsgroups to change. What should I do?
Q: I want to go back to one single newsgroup for amateur radio on Usenet, like we had back in the 1980's. What should I do?
Q: I support some of the newsgroups for amateur radio, but not others. What should I do?
Q: I support the existence of a newsgroup, but disagree with its charter. How should I vote?
Q: I would like new newsgroups to be created, what should I do?
Q: I have no opinion, what should I do?

Q: Who is doing this?

The rec.radio.amateur.* Working Group (rra-wg@theporch.com, which initiated the last major reorganization in 1993) is the point-of-contact

for questions about this proposed opinion poll. Principal members are Paul W. Schleck, K3FU, and Jeffrey Herman, KH2PZ. Though not an rra-wg member, Gary Coffman, KE4ZV, also endorses this proposed opinion poll. The proposed opinion poll will be conducted by an unbiased third party from the Usenet Volunteer Votetakers (UVV), Jeremy Billones (billones@primenet.com).

Q: How may I join the rra-wg?

Anyone who volunteers may join the rra-wg. The rra-wg has always solicited volunteers from when it was created in 1993 (originally named rra-reorg) to draft an RFD to reorganize the rec.radio.amateur.* newsgroups (and continues to serve as an advisory group for FAQ maintainers and new newsgroup proponents). You may join the rra-wg by subscribing to its mailing list.

The automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Q: Why are we doing this?

Discussion on the rec.radio.amateur.* newsgroups shows that there is a difference of opinion about the current newsgroups and their charters. Assertions on one side of the argument that the charters were voted upon by the readers have been countered with assertions on the other side that the votes took place years ago, by a very small minority of the current readership. There is also the strongly-held opinion among some that we have "too many newsgroups." The following is a sample posting from the discussion thread on rec.radio.amateur.misc that led to this proposed opinion poll (the entire thread may be viewed at DejaNews, http://www.dejanews.com/):

Q: What are we doing?

As a preliminary (and perhaps even diverting) step to an RFD (which would be very laborous and time-consuming, and perhaps unnecessary), we propose to conduct a Straw Poll, or "Vote of Confidence" (similar to the vote of confidence for a Prime Minister made by British Parliament, or a non-binding resolution of the U.S. Congress). We do it Usenet-vote style (utilizing a neutral vote-taker from the UVV) with an RFD and Call For Votes (CFV) period. During the RFD, we have discussion pro and con about each newsgroup and its charter. During the CFV, a vote is taken where a "Vote of Confidence" yeah or nay for each newsgroup, as currently constituted and chartered, is given by each voter (YES/NO/CANCEL/ABSTAIN votes are valid).

What votes mean:

YES: I support the existence of this newsgroup and its charter

NO: I believe that this newsgroup's existence or its charter should be reconsidered in a future RFD/CFV

CANCEL: Delete any previous votes I made concerning this newsgroup

ABSTAIN: I have no opinion concerning this newsgroup

Each newsgroup that does not pass a vote of confidence by Usenet voting standards (2/3 and 100 vote majority of YES versus NO votes) may be referred to the Usenet newsgroup creation process where their deletion or modification (based on a rough consensus of the 30 days of discussion and how much they lost in the vote of confidence) is proposed. Each newsgroup that does pass a vote of confidence will have its charter, and justification for existence, reinforced to the readership (as the current readership voted on it).

Q: More to the point, why are we "kicking over this hornet's nest?"

Sometimes hornet's nests can get big enough that they wind up falling down anyway. As shown in the thread above, there are significant undercurrents of disagreement over the current newsgroups, their charters, and even the suggested guidelines and rules of net-etiquette that many on the newsgroups advocate. If the proposed opinion poll shows strong agreement with current practices, then that would help reduce (though not eliminate) newsgroup arguments on the subject. If, however, the proposed opinion poll shows strong disagreement, then it's probably better that we know that right away, and take steps to fix the current situation before it degrades any further.

Q: Why do you want to change the newsgroups again?

Only some of the proponents of this proposed opinion poll wish to change the newsgroups. Some wish to simply have the current newsgroups and their charters reinforced. All of the proponents agree that an up-to-date opinion poll of the readership is desirable at this time. Whatever future actions will be taken will be determined by the results of this proposed opinion poll.

Q: Who are you to tell us what to do with "our" newsgroup?

One answer is that on Usenet, no one "owns" an unmoderated newsgroup. Newsgroups are voted into existence by a democratic process to determine consensus (and lack of significant objection) for using shared network resources to support them. All of the existing rec.radio.amateur.* newsgroups passed such a vote at some time in the past, and should pass such a vote again if there is strong support for their continued existence.

Another answer is that this is just a non-binding opinion poll of the readership to determine a consensus, if any, for making changes. It would still be necessary to undertake a formal RFD/CFV process to change any Usenet newsgroup (and that was always possible, anyway).

It should also be emphasized here that no individual rec.radio.amateur.* newsgroup is being singled out. Rather, a consensus of the readership concerning ALL rec.radio.amateur.* newsgroups is being sought.

Q: How long ago were each of the rec.radio.amateur.* newsgroups created?

1972 (or possibly earlier, this date is when UCSD joined the ARPANet):

Info-Hams (original ARPANet mailing list at Simtel-20, continues today
at UCSD as a gateway of rec.radio.amateur.misc)

1979:

Creation of Usenet News at Duke and UNC

early 1980's:

fa.info-hams (fa = "From ARPANet") *
net.ham-radio (pre-Kent Paul Dolan "Great Renaming") *

mid 1980's-1991:

rec.ham-radio *
rec.ham-radio.packet *
rec.ham-radio.swap *

1991 Reorganization:

rec.radio.amateur.misc
rec.radio.amateur.packet *
rec.radio.amateur.policy
rec.radio.cb
rec.radio.swap

1992/3 Addition:

rec.radio.info

1993 Reorganization:

rec.radio.amateur.antenna
rec.radio.amateur.digital.misc
rec.radio.amateur.equipment
rec.radio.amateur.homebrew
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.amateur.space

1996 Additions:

rec.radio.amateur.dx
rec.radio.amateur.boatanchors

* = obsolete

Current newsgroups covered by this proposed opinion poll, and the years
in which they were created:

rec.radio.amateur.antenna (1993)
rec.radio.amateur.boatanchors (1996)
rec.radio.amateur.digital.misc (1993)
rec.radio.amateur.dx (1996)
rec.radio.amateur.equipment (1993)
rec.radio.amateur.homebrew (1993)
rec.radio.amateur.misc (1991)

rec.radio.amateur.policy (1991)
rec.radio.amateur.space (1993)
rec.radio.info (1992/3)
rec.radio.swap (1991)

Q: Why are the non-rec.radio.amateur.* newsgroups rec.radio.info and rec.radio.swap included in this proposed opinion poll?

Though one level up in the rec.* hierarchy, these newsgroups are principally used by readers of rec.radio.amateur.*, and their fates would substantially be decided by any significant reorganization of the rec.radio.amateur.* newsgroups. Though created by a rec.radio.amateur.* reorganization, rec.radio.cb is not included in this proposed opinion poll.

This announcement has been cross-posted to all rec.radio.* newsgroups (except for rec.radio.broadcasting and rec.radio.info, which are moderated). In addition, the following individuals were consulted prior to this announcement (note that consultation does not necessarily imply endorsement):

Richard Eckman, KO4MR, Proponent of rec.radio.amateur.dx
Brian Kantor, WB6CYT, Administrator of Info-Hams/Ham-* mailing list gateways of rec.radio.amateur.* newsgroups at UCSD
Ian Kluft, KO6YQ, Proponent of 1993 rec.radio.amateur.* reorganization, former rec.radio.amateur.* FAQ Maintainer
Jay Maynard, K5ZC, Proponent of 1991 rec.radio.amateur.* reorganization
Brian Short, K7ON, Moderator of rec.radio.info
Rick Stealey, K2XT, Proponent of rec.radio.amateur.boatanchors

Q: Where can I obtain a copy of the original newsgroup charters?

ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.info
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur-reorg
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.dx
ftp://ftp.uu.net/usenet/news.announce.newgroups/rec/rec.radio.amateur.boatanchors

Q: Where can I find out more information about the Usenet RFD/CFV process?

ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Create_a_New_Usenet_Newsgroup
ftp://rtfm.mit.edu/pub/usenet/news.announce.newgroups/How_to_Format_and_Submit_a_New_Group_Proposal
ftp://rtfm.mit.edu/pub/usenet/news.groups/Guidelines_on_Usenet_Newsgroup_Names

Q: I don't want any of the newsgroups to change. What should I do?

Express your opinions on news.groups (the default followup newsgroup for this message) and vote "YES" for all of the existing rec.radio.amateur.* newsgroups when the proposed opinion poll occurs (in 30 days time).

Q: I want to go back to one single newsgroup for amateur radio on Usenet, like we had back in the 1980's. What should I do?

Express your opinions on news.groups, and vote "NO" for all (or all but one) of the newsgroups when the proposed opinion poll occurs.

Q: I support some of the newsgroups for amateur radio, but not others. What should I do?

Express your opinions on news.groups, vote "YES" for any newsgroups that you wish to remain unchanged, and vote "NO" for any newsgroup you wish to have reconsidered in a future RFD/CFV when the proposed opinion poll occurs.

Q: I support the existence of a newsgroup, but disagree with its charter. How should I vote?

Since the proposed opinion poll is for both the existence of given newsgroups AND their current charters, you should express your opinions on news.groups and vote "NO" for that newsgroup when the proposed opinion poll occurs. Again, this is a non-binding opinion poll simply to determine if current newsgroups should be considered for modification or deletion, not a vote to actually modify or delete these newsgroups.

Q: I would like new newsgroups to be created, what should I do?

Creation of new newsgroups is not being considered by this proposed opinion poll. A future RFD/CFV would have to be initiated to do this. You are, of course, welcome to express your opinions concerning new newsgroups on news.groups.

Q: I have no opinion, what should I do?

You may wish to read the following 30 days of public discussion on news.groups about this proposed opinion poll to develop your own opinions. Discussing your resulting opinions on news.groups may help further develop your opinions, or those of others.

If, after reading and participating in the public discussion, you still remain undecided, you may choose to abstain from the proposed opinion poll. You may do so informally by not participating in it at all, or formally by explicitly voting "ABSTAIN" for all of the newsgroups when the proposed opinion poll occurs.

Watch for an announcement of the STRAW POLL (CFV) in about 30 days. Questions to rra-wg@theporch.com.

:Any number of rigs probably will work just fine for you. For my money I
:favor the Kenwood TS-830S.

I started with a Yaesu FT-100 (I think an FT-100EE). It covers 160 - 10
(except 30 17 and 12, though you could listen on 30, since it has 10 MHz to
get you time signals). If you get one that is running well, $300 - 400 ought
to do it I think; ten minutes with an elmer and the instruction manual (so
you learn how to calibrate and tune it correctly) and you're off. I used it
regularly on 80, 40 and 15; then I hooked up a mic and it was great on 10 as
well.

Perhaps this is another good use for a PalmPilot. To my knowledge the
3Com/USR PalmPilot does not have a conventional, PC like, serial port.
How would a TNC/GPS combination be interfaced to the PalmPilot? I do
not presently own a PalmPilot, but I wouldn't hesitate to buy one for
such a setup for mobile APRS.

It's not just old, it is also the best probe they ever made.
The hook really hooks, unlike several of their newer probes.
And the nail point actually fits in, and stays in, standard
test points, something their newer probes don't do either.

It is 1 megohm, 20 pf, with equalization adjusted by rotating
the probe body (after releasing the lock ring). It is 10x, meaning
that all amplitude readings must be multiplied by 10 when using
it. It is nominally flat to 50 MHz when properly equalized, but it
will actually go much higher than that. It is rated for 500 volts.
Don't step on it. It is one of the last of the good ones.

>W4SCO.

Well, lets be honest here. The local E911 system is a continuing scandal.
It doesn't take a tornado to make it nearly collapse. The problem isn't
technical, the problem isn't capacity, the problem is incompetent E911
operators and supervision. The world laughed when the AOC operator
insisted that New Mexico was a foreign country, but the world didn't laugh
when the E911 operator didn't know what or where Centennial Olympic Park
was when the bomb threat was called in. And the people of Atlanta don't
laugh when they know that their E911 average response time is 35 minutes
when the national average is 7 minutes. (And that's not due to a lack of police,
fire, and EMS units. It is a failure to accurately and quickly convey emergency
information from the public *to* those agencies.)

Police and fire departments in metro Atlanta (there are 54 of them), have
their own 800 MHz trunking systems separate from the E911 system. They
didn't go down. They didn't collapse. Cellular systems didn't collapse either.
(There are two of them, Bellsouth Mobility and Air Touch, plus Nextel's SMR
system and the PCS systems.) The bottleneck was the E911 system. It is the
sole interface between the public and police, fire, and EMS response units.

Hams didn't bridge that gap. Hams did provide valuable support functions
during and after the tornados. Primarily that was via timely spotter reports
direct to the weather service, and damage assessment reports in the aftermath
of the tornados. They provided additional eyes and ears to search and rescue
in the affected areas. And they also filled the usual logistic support role that
amateur radio plays for entities such as the Red Cross.

Hams did a nice job of that, but they didn't substitute for an overloaded cellular phone system (which continued to work just fine, our crews never failed to get an immediate dialtone, nor did they have a call drop out), and they didn't substitute for overloaded police and fire 800 MHz trunked systems (which also continued to work just fine, surprisingly considering the hassles DeKalb county had with Motorola over their system, at one point police dispatchers unknowingly sent a garbage truck to a holdup due to that fouled up system). And hams didn't effectively bypass the bottleneck of the E911 system in communicating distress calls from the public to the responsible emergency response agencies. That's where the system had serious trouble. The E911 system is a disgrace.

Of course the public didn't help either. They do continue to flood E911 with non-emergency calls. E911 is not the public library help line. It isn't intended to answer stupid questions from the public. (And the public can be really stupid, it is really true that directory assistance gets calls asking for the number for 911.) If they just want to know what's happening, they should turn on the radio or television and find out from those whose job it is to inform them.

For once, the local media did an excellent job of that. We got the warnings out in time, and we got the reports on the damage in the field out as quickly as humanly possible. (In some cases a bit quicker than common sense would dictate. One of our crews had to run for it because they were setting up in the path of one of the tornados, and in another case a crew had to be stopped from raising their mast in the severe lightning storms in which the tornados were embedded.) Things don't always work so well. We were caught flat footed by the Hall county tornado, as was the weather service. We were able to track the Atlanta tornados on our doppler radar, but we didn't see a thing during the Hall county tornado. The storm appeared to have dissipated when that one hit. We didn't find out about it from hams, however. We found out about it from the Hall county sheriff's department.

Hams have a role to play in disaster situations. And it is often an important role. But don't oversell it. The cellular system is not always on the point of imminent collapse. The problem is usually on the end answering the calls. And hams can't really help there. Our radios don't ring when 911 is dialed.

Hello
I have a Kenwood TS 680 I would like to sale. I'm asking $650.00. This price includes shipping. The radio is in good shape. The radio has no mods. It covers 160, 80, 40, 30, 20, 17, 15, 12, 10, and 6 meters. The rig comes with hand held mic, DC power cord, and instuction manual. The rig is pretty good shape. If you are interested drop me a email.

Howdy. I am looking for some DEAD or near dead HF or VHF rigs to tinker with in my spare time. If you have something kicking around the shack you no longer have any use for let me know as it might be something I'd want to tinker around with and try to get working. I would prefer gear that hasn't been torn apart or robbed of parts. Drop me some email with what you have and your asking price and maybe we can work something out. Thanks in advance.

Extended transmit mod for the ICOM 706 MKII

This file may be freely distributed as long as it remains intact, with no
modifications, additions, or deletions.

DISCLAIMER:
I assume no responsibility for damage or inaccuracies contained in this
document. In other words, USE THIS AT YOUR OWN RISK. It worked for me,
however I don't know if it will work for you.

WARNING #1: This mod requires the ability to remove surface mount diodes.
Only those who are qualified to do this should attempt this mod.

WARNING #2: This mod seems to erase all memory channels, etc. You may want
to save this info for reprogramming.

Disassembly:
1. Face the front of the radio towards you.
2. Remove the three screws in a row across the middle of the top of the
radio.
3. Remove the two screws at the top rear (on the sides) of the radio.
4. Pry the top cover off from the back.
5. Disconnect the speaker at the connector.

Modification:
6. Near the top rear of the main circuit board, there is an small, oblong
metal can. Directly below the right side of this can is two surface mount
diodes with a white silk-screened box around them. There is also what
appears to be a circuit board part number just to the left of it (mine says
B4916D). Remove the LEFT diode in the box.
7. To the left of this, there is a test point marked CP3. Just to the left
and above this test point is another box with two *vertically* mounted
surface-mount diodes (Note: there is also a place for 5 more *horizontally*
mounted diodes, with 3 installed). Remove the LEFT vertically oriented
diode.

Reassembly:
8. Reconnect the speaker.
9. Put the top cover back on. Insert the top cover tabs into the slots and
lower into position.
10. Replace all of the screws.
```

My radio did not require a reset, however I did lose all of my channel memories. It seems to be able to transmit everywhere except below .5 Mhz. I have not tested the power output at all frequencies yet.

I hope this helps everyone who have been waiting patiently for this mod.

Any comments can be directed to me:

Nah, unfortunately Burt doesn't fall into that category. He'll just lurk waiting for an opportunity use one of his canned replies such as the one Walt will get: 'Ignore me like you did?'.

Burt has had several failures in his life and his personal absolution is amateur radio. Rather than be a man and accept the responsibility, he blames these failings on his involvement on amateur radio.

Burt's beef with the ARRL over his removal as a VE illustrates how Burt fails to take responsibility for his own actions or in this case inactions. It seems that k1oik was lost his VE status because he failed to be involved the the required number of testing sessions over a specific period. Ask Burt when he was removed as a VE and when he was last involved in a testing session. He'll sidestep that question.

Burt has gotten out of amateur radio is exactly what Burt has put in to amateur radio, not a bloody thing. As much as Burt bad mouths amateur radio it is interesting to note that k1oik's ticket has been recently renewed. Judging by the renewal date, someone in Gettysburg is familiar with Burt.

I still waiting to read Burt's letter on amateur radio in the Atlanta Journal-Constitution. k1oik likely blames amateur radio for the fact he can't cross-post his crap to the print media the way he does the newsgroups.

Burt makes me shake my head and laugh with his childish antics. Everytime Burt posts his canned HI message, I give him a timeout. He gets plonked for 30 days. Hey thats not a bad idea!

HI es 73 de n4jvp

Hi Chris,
Practice, Practice, Practice. I found that listening to CW on a tape while driving was a great way to practice. At 5wpm I would suggest you just concentrate on each letter and number and not worry about putting them into words at this time. You can start doing that as you build up your speed.

I was using the ARRL code speed tapes to prepare for my Extra. I had only been using the 15 wpm and 18 wpm and was going to give myself till the end of the year to get my extra. I went in two months ago to take my advanced theory and decided to try the 20 wpm code exam just to see how far off I was. I passed without much of a problem.

Get a good night sleep before you take the exam and don't get too worked up before you walk into the exam room.

Good Luck

I am selling all of my amateur radio equipment. All the rigs are no more than 2 and a half years old.

Every thing must go, from Yaesu and Kenwood extension speakers for a tenner, to ICR8500 RX for a grand, and everything in between. Here's a sample of what's on offer, IC736 HF+6M, kenwood TMV7E mobile (18 months old), TH79E handy, packet and computer stuff, linears, SWR, PSU, antennas for 23cm/70cm/2m/6m/4m, WX sat gear, etc...etc...etc...

Everthing must go, all offers considered.

Email G7VFW@BTINTERNET.COM for complete list.

I will demonstrate and deliver (within reason) in the northwest.

Alan,

I have the Travelradio for two years now. It works great. The only complaint is that it drifts a bit. With a ground mounted vertical I have worked about 20 states and a few countries to boot.

Regards,

Duffy - WB8NUT

My wife just got a Palm III. There is a DB-9 serial port adapter available
for the Palmpilot (At an ungodly price, of course, but I've yet to be able
to find a connector that will work with the PalmPilot so that I can
hack my own.)

There is also software available to upload and download tracks, routes,
waypoints, etc. from a Garmin GPS to/from the palmpilot. You could
easily adapt it for use to capture APRS data and to handle APRS
broadcasts.

Personally, I would go for a used HP-200xl for a portable packet station.
The keyboard is MUCH quicker to use than the Graffiti software used on the
Palm, and the HP had the added advantage of being able to run lots of DOS
software.

Many of your posts make references to male amateurs and their supposed lack of commitment to their spouses. The body of one post you made today consists solely of "Because they cannot find girls." I haven't seen your tag-line about the pink teddy and the ascii drawing of a female. Was that female your first wife or your second wife? Would you categorize your first marriage as a success?

For those keeping score: 1

How about the story about you getting arrested and having your picture in the Boston Globe? That story that goes around from time to time, does it bear any truth?

Wait for the replay...

Vanity-dating! Wow is that like getting a vanity callsign? How much do
it cost?

You deride amateur radio and its participants, yet you renewed your
ticket and you bitch about losing your VE status. You call it the
equivalent of Club Zero and yet you desire to remain a member? It
doesn't really make much sense but then neither do you. You
continually mock yourself.

Try eventualy YAESU in UK or Holland. Irespective of the possible fact that these cables are not standard spareparts it should be possible to obtain them from there - especially if you by any chance have the part No. from the manual.

HI Chris OM,

I highly recommend an older transceiver for starters (also keepers).
My suggestion is the TS820 or TS820S. These rigs are simple, rugged,
easy to use, have built-in AC supply, are repairable, and also have FSK
capability (FSK was, inexplicably, deleted in the TS830S, TS430S,
TS440S). They work well for most all modes including RTTY and ARQ modes
such as Amtor and Pactor. I've been using mine most every day for 18
years now, exclusively CW and FSK, and I wouldn't part with it. Later,
when (if?) you ever want to sell it, it will be worth about what you
paid for it. $400 is a ballpark price today, and hasn't changed in the
last decade or so.
Good luck, keep it simple!
73,
Don W6JL

Bob:

Not really... however, I remember a third-party, short-wave converter that you could piggy-back on top of the IC-R7000, and then it connected inline with the antenna connection. As I recall, it worked, but not as well as a dedicated short-wave receiver.

No, there was a technical misunderstanding on our part about how the
mailing list was set up. The rra-wg@theporch.com mailing list has now
been reconfigured to accept mail from nonsubscribers, at least for the
duration of this straw poll. Send to that address, not the others.

>I've tried to explain to these people why the procedure they're trying
>to follow is wrong, but apparently I had very little success. :-(

Well, it seems there's a difference of opinion, and I'm willing to
publicly acknowledge that (while still reserving the right to disagree
with John Stanley on most things). I can offer the excuses that I ran
this proposal (including the exact text and headers) past people who
should know the right answer (previous newsgroup proponents, UVV
representatives), and emulated what I've seen others do on news.groups
with a reasonable amount of such meta-discussion, but I guess ultimately
the responsibility lies with me. If you truly feel that such
meta-discussion belongs back on a home newsgroup (like
rec.radio.amateur.misc), then certainly do as you wish and edit the
Newsgroups line to reflect that. I apologize for any offense or
inconvenience.

1224. KENWOOD TM-G707A vs. TM-V7A Mobile Radios

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-27 00:00:00 UTC
From: Bernie Kopp KB9KEF <bkopp@execpc.com>
Message-ID: <6i2ui8$8qu@newsops.execpc.com>
Source record: 173368
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,

After researching the Kenwood links at,

http://www.kenwoodcorp.com and http://www.kenwood.net/amateur

I still don't know what all the features of the TM-G707A are and how the two radios cited above differ from each other!

At this time, both radios are very close in price (about $450 - $500) depending on coupons, promotions and vendor).

As for the TM-V7A, has anyone else noticed that the viewing angle for this radio's display is much more critical than your typical flat amber/black display? At the AES SuperFest I saw about six Kenwood mobile transceivers lined up next to each other and the TM-V7A's display could not be viewed beyond a 30 to 45 degree angle.

Yaesu FT8100R's are down to $499.00 now....Hmmmmmmm? Decisions, Decisions......

Thank you for the group's consideration.

If you care about how these groups are going, you had better pay attention to a SMALL group that want to have it their way. I am tired of these people trying to tell us what we should or should not say in a message or group. IF YOU DON'T LIKE WHAT'S IN THE GROUP.....YOU DON'T HAVE TO READ IT.

If you want moderated groups....then bring them into existance and be done with it.

All readers.....be prepared to let people you don't even know tell you what you should and should not be able to do in these groups.

Forewarned is forearmed.

I started getting the RFP and quickly unsubscribed.....what a waste of time to try and read it. Only one day and over 20 messages from the same individual......I love these "For your own good." attempts.

Based on thoughtful feedback from Kathy Pascoe (kpascoe@ford.com) and Yves Belleveuille (yan@storm.ca) on news.groups, I've come to the conclusion that rec.radio.amateur.misc would be a better followup target for this straw poll discussion.

I sent the original copy (complete with exact headers) to several experts, including past newsgroup proponents and our volunteer UVV votetaker for review a week prior to posting, but unfortunately no one (including me) noticed that a followup to news.groups might generate controversy. As helpful as the standard FAQ documents on newsgroup creation were, they weren't (in my opinion, at least) sufficiently clear regarding the inadvisability of conducting informal meta-discussion on news.groups. It's also sometimes hard to figure out what's appropriate on what newsgroup by observing others. According to Kathy and Yves, news.groups is an appropriate target for discussion in response to a formal Usenet Request for Discussion (RFD), but informal pre-RFD discussion (including straw polls) should probably be conducted in an appropriate home newsgroup.

Since more than one person has offered this feedback, and in a thoughtful and convincing manner, I'm posting this correction, and asking that followup discussion on this straw poll (which should commence, as scheduled, in 30 days time) go to rec.radio.amateur.misc.

> Morse code is an aural mode, not a visual one.

Eh? What about ship-to-ship flashers?

How do deaf hams copy code? I can imagine flashing lights or feeling a buzzer. No doubt both are in use, plus things I haven't thought of. Let's see, the big 5 senses are sight, hearing, touch, smell and taste. Diffusion seems to make smell unlikely (kinda like trying to copy with a 0.1 Hz filter.) Anybody copy by taste? I can imagine putting some kind of electrode in the mouth to get that chewing-foil-with-fillings sensation, but that's not strictly taste I guess.

1228. WARNING: POTENTIAL MAJOR SOLAR FLARE WARNING - 27 Apr

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-27 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <6i30nb$4kt13@mars.online.uleth.ca>
Source record: 173372
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,sci.astro,sci.astro.amateur

/\

POTENTIAL MAJOR SOLAR FLARE WARNING

ISSUED: 21:15 UTC, 27 APRIL

/\

PRIMARY CANDIDATE FOR HIGH SOLAR ACTIVITY : REGION 8210 (S17W45@27/2100Z)

ESTIMATED POTENTIAL MAGNITUDE OF ENERGETIC ACTIVITY OVER NEXT 7 DAYS						
DAYS	C5.0	M1.0	M5.0	X1.0	X5.0	>X12.0
1(+)PG	90 %	80 %	30 %	20 %	10 %	5 %
3( )PG	100 %	90 %	50 %	40 %	10 %	5 %
5(-)PG	100 %	95 %	70 %	50 %	10 %	5 %
7(-)PG	100 %	95 %	75 %	50 %	10 %	5 %

DAYS = Number of days (from present) into the future (1, 3, 5 and 7 days).
(+) = Primary candidate region expected to GROW and DEVELOP.
( ) = Primary candidate region expected to STABILIZE or remain STABLE.
(-) = Primary candidate region expected to DECAY and SIMPLIFY.
(x)P = Possible proton and/or PCA threat. (x) may be one of (+), (-), or ( ).
(x)G = If a favorable major flare develops, a moderate to high probability exists that the event may be geoeffective.
xx % = Probability of activity equalling or exceeding the given x-ray class sometime over the next number of DAYS.
WLT = Data not applicable due to the West Limb Transit of the target region.

The above chart should be used as a guide only. It represents anticipated levels of activity based on current projections of region development. Actual conditions may, of course, differ from these projections.

SYNOPSIS:

Region 8210 produced its second major X-class flare since first appearing on the limb several days ago. This spot group is a reversed polarity region and contains high gradients along the eastern, northern, and northwestern sides of the main spot. More importantly, there is a an area of magnetic shear that exists immediately north of the main spot in an area where new opposite polarity flux appears to be emerging and where gradients are high. There is also a dark filament that exists along the neutral line that stands a good chance of erupting should another flare occur.

At the present time, the occurrence of minor M-class and even major M-class flares appears to be the most likely scenario. However, another major X-class event is a distinct possibility, and will even be a likely occurrence should flux continue to emerge along the stressed northern region of this group.

Big Bear Solar Observatory also notes a magnetic delta configuration may exist along the northern end of the region where opposite magnetic polarity flux is emerging near the main spot.

There is a potential risk of a proton flare from this region over the next week. Thus far, todays major X-class flare has failed to increase proton populations near the Earth. The flare does not appear to have been a proton producer. However, a future event certainly could elevate proton levels.

A fairly fast-moving coronal mass ejection was observed in conjunction with todays flare. It is likely the Earth will be impacted late on 29 April or early on 30 April, with the bulk of the increased geophysical activity occurring on 30 April.

To observe these significant solar events in realtime on your own computer, interested persons would do well to investigate the software at:

http://solar.uleth.ca/solar/www/swarm.html

For additional solar information, consult: http://solar.uleth.ca/solar

I'd check AES/HRO or Burghardt to see what they've got used. I can reccomend the IC730 which show up used from time to time. Solid
state, first radios to have WARC bands, which are nice. That's
really the problem with most of the old tube radios is they don't
have WARC bands, 30/17/12. I had an IC730 but sold it to my brother.
Put up a wire antenna. And go to Radio Shack and buy an HT for 2m.
That'll set you up pretty good. 10M really works nowadays too.

From "Pieter" <ibelings@mindspring.com>
Subject: FT-847 Mod here it is
Date Tue, 7 Apr 1998

I've received some preliminary information about the ft-847 mob. It involves taking the cover off (which one I don't know) and solder bridging jp1002 and jp1003 then powering up with the lock button pressed. According to my source this will open the radio completely. According to the mod, transmitting in the range of 33-37 Mhz candamage radio. I'm still waiting for my radio to try it on.If anyone tries it please let me know the tx range.

Perform this mod at own risk

Peter

Most of the companies selling NiMH battery packs make suggestions.
You could also instead for $50 or so try the MAHA semi-universal
battery charger, which seems to work equally well with Nicads &
NiMH Battery packs. Periphex also seems to be selling either the
Maha unit or an incredible lookalike for performing the same task for
the same price as the Maha unit. I would hesitate to modify the
Icom charger personally, as I recall the differences at end of charge
were the hardest thing to deal with, and that the circuitry just for
NiMH chargers was entirely different from than for nicads.

Greetings. I am trying to find data sheets on the Mitsubishi RF PA "block" modules. I believe that Mitsubishi Semiconductor make one which covers the 6m amateur band (50-54MHz) but I have been unable to locate any information on any web sites I've looked at so far. Searching Alta Vista has produced no joy.

I need this info to complete the conversion of a 70MHz commercial radio (Kyodo/Sawtron KG107) to 6m. I have the RX working very well but it has a Mullard/Philips BGY32 module in the PA which only covers 60-74MHz.

Any information would be greatly appreciated. If someone can point me to an online data source that would be great - otherwise a hard copy by snail mail (or even a readable scanned copy via email) would be of great assistance.

Thanks in advance,

Rodney Baker VK5ZTV

1246. ADMS Yaesu VX-1 Problems

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-27 00:00:00 UTC
From: ron@zl2ol.wn.planet.gen.nz
Message-ID: <1919rem62.alamito@zl2ol.wn.planet.gen.nz>
Source record: 173435
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I'm writing in respect to my ADMS software / Cable interface which I cant get to function properly ie it wont download from my Yaesu VX-1 the
data to create a template.

The carton label say's its a 97 Ver 4.0. It has enclosed a 3 1/2" floppy with files Ver 1.03 (as listed on the helpfile) & V1197 on the disk label. I trust this ID's the package sufficiently.

The VX-1 wont talk to my PC serial port which is set for Com 2. The software runs OK and tells me to create a template, I turn the VX-1 on while holding the FW to switch into Clone mode, I then press the DWN key & no data is tranfered over to my PC, the software remains in receive mode doing nothing, no error messages are reported except when you move the four
pin mic connector in & out of the socket on the VX-1 when it reports bad data, I think this is just noise created by the socket / plug make & break connection.

I've checked the cable connections to the PC & all is fine, the adapter cable to the VX-1 (four pin) is plugged in all the way and the computer comm 2 port is working fine to another data terminal (set for Comm 2).

I'm at a loss as to whats happening, it appears that the cable or the VX-1 is at fault, as the PC works fine on the other software.

The PC is a Pent 150, 32MB RAM etc etc running W95 4.00.950, the mouse is on Comm 1, the ADMS on Comm 2 & my telephone modem (internal) is set for Comm 4. Everything else works fine except the ADMS.

Has anyone any help to offer, I'm at my witts end just now.

1252. Packet Radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-27 00:00:00 UTC
From: l33863@alfa.ist.utl.pt
Message-ID: <6i1rtm$2u5$1@ci.ist.utl.pt>
Source record: 173441

Hello.
I'm moving on to packet radio.
I need a modem. Saw some docs on the web about the
Baycom 1200bps modem.

I have own "normal" modems for some years. The first
I had was 2400bps, in a time where the highest speed
was 9600bps. Things have changed and know, transfer
speeds just keep getting higher and higher, althought
the telephone lines have a bandwith limit.

So, since I don't feel like going back to 1980, and
use a 1200bps modem, where are some questions:

- Is there a FAQ on packet radio? I have looked but
couln't find it. :-(
If you have one, please mail it to me. If you know
where I can find one, please let me know the web
adress.
- How fast can a packet radio modem go in bps?
- I wish to build my own. What model should I use?
Where can I find the schematics?
- What "make it yourself" models are people using?

Thanks for your time,

JL

PS: I'm using a President Lincoln. Maybe this is
important when it's time to choose a modem.

Hi Adam,
If you can ignore the few trolls and doomsday shouters this is a good place to start. Most of us are friendly and positive towards this great hobby.

Good start on the receiver. My interest in amateur radio started with listening to hams on my Granddad's old 1930's AM - FM - SWL - POLICE receiver in the mid 1950's. Got my license in 1962 and I have never regretted being a ham.

Where you go from here depends on where you live. Go to Radio Shack and pick up a copy of Now Your Talking. This will give you the needed information to get your Technician or Novice license. They also sell some code tapes to help you start learning the code.

Check out the phone book under radio and electronics to see if there is a ham store in the area. If so contact them and find out about any ham clubs or ham radio classes going on. (Sometimes Radio Shack will have this information also).

Look around your neighborhood to see if there any hams. You can sometimes tell by the ham radio calls on their license plates or by the large antennas on their property. Introduce yourself and ask them if they are a ham operator. Tell them your interest and ask if they know about any classes or clubs in the area.

Good Luck and welcome to the group.

To the tune of "Bitch" by Meredith Brooks

(chorus)I'm an ass I'm a moron I'm a nut I'm a waste,
I'm a liar and a loser, I really feel
ashamed. Every morning when I rise, Laura
don't believe her eyes , "oh my God, he aint
dead, he's sicker in the head"

I'm a weenie, I'm a dork, I type these
all at work, can you believe your
eyes, my paychecks on the rise. I'm a
malcontented ass, my postings reak of gas,
I'm just like all the hams, cept that I don't
give a damn.

Just when you think you have me all figured
out, my doctor changes my dosage. I think its
cruel I do what I do, but no one tries to stop
me... (chorus)

I expected your reply to be nothing more than a one liner not addressing any of my questions to you and it lookslike I got exactly what I expected. Some 17 year old kid tells you to get lost if you don't like the hobby and you reply with comments about being a geek, having acne, and not having any girlfriends. Your pityful Burt. Your claim to be a teacher someone who should be a role model for young students, instead of discussing the issue with the 17 year old poster you resort to 'playground level' name calling. I bet your family has a lot of respect for your name calling abilty. It's top notch.

You preach to the rest of us about being different on the NG than in person, you of course being the exeption.
Do you treat your students in your class with the same immature name calling and generalizatons? If not then you must also be different on the newsgroup than in person. Either way, you seem very comfortable throwing stones at a newly licensed 17 year old ham. Very impressive for a grown man Burt.

I couldn't figure it out, so I bought the ADMS-1D software.
Works great. FYI, when it's done right, both the "+" and "-" repeater
shift indicators are on.

I did see a post in the AMSAT archives (sorry, I can't find it), that
alleged that it was documented in the manual and involved pressing the PTT
button while standing on your head and shouting, "GET IN, GET IN" or
something like that.

>had any problems with the R.S. "thru glass" type ant.

If you tell your dad to put either a magnet mount or a regular mount antenna on his vehicle you'll find out what you really have been missing. There is alot more loss of signal thru the glass then there is if you were running a standard antenna.

The numbers are VERY important. KNOW the NUMBERS. When taking the CW
test, pay attention to names, weather, radio & antenna types, adn
callsigns. THOSE are the types of questions they ask.

I think you mean Burt, K1OIK, and yes he has a little preoccupation with the use of HI. Hey look the bottom line is that we communicate and have fun, I don't really care whether or not you use HI on CW, phone or in text form. It's just not important enough to care one way or the other.

Hi Karsten,

Problem is that the service manual has no part number for these cables. The local dealer tells me a similar case a few years ago meant them having to ship the cable to Yaesu and then wait weeks if not months for the reply. Not a nice solution if your radio does not work without it. I know it sounds crazy, but there are no part numbers for these cables.

Hi and many thanks for reading this.

The Queen's University of Belfast Radio Club will be testing their 70MHz station this comming Monday, 4th May 1998.

Unfortunately our antenna wasn't completed for the 4m cumulatives or contests so this will probably be our only chance to get all of the kit together before it is used in anger in the VHF National Field Day in July.

We would like to test the gear out but we know that there will probably not be a lot of activity as there are no 'tests running. So we are looking for skeds. Anyone out there fancy comming on for half an hour on a Monday Bank Holiday? It will probaly be raining anyway!

If you are interested in a sked we will be operational from noon onwards on SSB/CW although we will have FM capability if required. Please email me direct gi0ssa@geocities.com if you can make the sked. We will be operating from the County Down Coast near my home QTH which is J58 for WAB and IO74F? depending on which hill we choose.

The callsign in use will be GI8FQB/p. We may also be on 80m using a mobile whip and the call GI3LLQ/p

Many thanks in advance

De Keith GI0SSA

OK Robin,

As I see it there is only two solutions left, viz the cheap one and a little more costly one.

You can use RG 174 cable (surely obtainable from RS-Components in UK or RS-Radio-Parts in Denmark, whereever you are located) and then solder it directly either to the prevailing sockets or remove them and solder directly to the PCB. You can also with advatage use the silver-braided, teflon-insulated this coaxcable (appr. 3-4 mm�) normaly used in cellular phones.

The more expensive way will be to replace the existing socket with new standard coaxsockets (goldplated) and solderable connectors for the above mentioned cable types (eventually in one end of the cable only just to make it detatchable from one PCB to another).

I'm quite sure that for RF (not VHF or UHF) the cheapest solution will prove quite satisfactorily.

Regards
OZ1GB, Karsten

Orange County Disaster Response Group Needs Volunteers

The IMPACT DIsaster Response Unit based out of Orange County, California is looking for volunteers to help staff its unique and one-of-a-kind Disaster Response/Disaster Communications Unit. The IMPACT Unit is a mutual aid/mutual support groups that works with all public service agencies, cities, and other organizations like the American Red Cross, REACT Teams, RACES groups, ARES groups, and many more.

No training or equipment is required. Just the need to want to help those who live around us.

We have training classes set-up in first-aid/CPR, basic search & rescue, disaster preparedness, communications at a disaster scene, amateur radio workshops, advanced first-aid/EMT First Responder, and many more.

The IMPACT Disaster Response Unit utilizes all radio bands including: Amateur, GMRS, CB, FRS, Cellular, Business/Commercial Bands and many more.

For more information, please send e-mail to sct_impact@bigfoot.com

Check out our web page!

/\

MIDDLE LATITUDE AURORAL ACTIVITY WATCH

WATCH ISSUED: 21:30 UTC, 28 APRIL

/\

ACTIVATION: 12:00 UTC ON 29 APRIL
VALID UNTIL: 19:00 UTC ON 01 MAY

HIGH RISK PERIOD: 30 APRIL (UT days)
MODERATE RISK PERIOD: 29 - 01 MAY

PREDICTED ACTIVITY INDICES: 10, 14, 25, 17 (28 APR - 01 MAY)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: MODERATE

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR & AFTER LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: LOW

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: FAIR - GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHERN WASHINGTON STATE TO NORTHERN IDAHO TO CENTRAL MONTANA TO
SOUTH DAKOTA TO SOUTHERN MINNESOTA TO SOUTHERN WISCONSIN TO SOUTHERN
MICHIGAN AND POSSIBLY PARTS OF NORTHERN ILLINOIS AND NORTHERN OHIO,
TO DARK-SKY SITES OF NEW YORK STATE TO POSSIBLY DARK SKY LOCATIONS OF
NEW HAMPSHIRE AND MASSACHUSETTS.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

UNITED KINGDOM TO NORTHERN EUROPE INCLUDING ALL OF NORWAY, MOST OF
SWEDEN AND MOST OF FINLAND, TO NORTHERN RUSSIA. EXTREME SOUTHERN
REGIONS OF AUSTRALIA (PARTICULARLY EASTERN AUSTRALIA) AND NEW ZEALAND
MAY ALSO SPOT PERIODS OF ACTIVITY.

* Contact: Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu for more
information regarding the Auroral Activity Prediction and
Simulation Software.

SYNOPSIS...

Auroral activity is expected to intensify late on 29 April or early on
30 April in response to the anticipated arrival of a shocked interplanetary
disturbance that was associated with a major X-class solar flare on 27 April.
Although this is not expected to be a significant disturbance, it has the

potential of producing periods of moderate to high auroral activity over the high and upper-middle latitude regions. As a result of anticipated equatorward expansion of the auroral oval during that time, widespread observations of activity from dark-sky middle latitude sites might be possible, particularly after the moon sets (shortly after local midnight) on 30 April. This disturbance is expected to last approximately 24 hours, with the main core of activity lasting approximately 18 hours. At the present time, if the disturbance arrives late on 29 April, North America will be optimally placed for observing the main phase of activity. However, if the disturbance doesn't arrive until 30 April, New Zealand, Australia and European regions may have the best "seats" for observing activity.

This WATCH will remain active until 19:00 UTC on 01 May. It will then be updated or allowed to expire.

For realtime information regarding the status of the disturbance, and any other solar flares or terrestrial disturbances, consult: http://solar.uleth.ca/solar/www/swarm.html

** End of Watch **

You might note that COM2: and COM4: use the same IRQ -- that often
causes
problems with other communications software... I suggest removing the
MODEM
for a test, that is the only way to quickly tell if the rig, software
and
cable are OK.

I suspect the cable, rig and software are OK, just a bit touchy!

You will also want to upgrade the software, V1.03 has bugs download the
patch
from RT's site: http://www.rtsars.com

I just purchased the software and cable ... after some start up
problems, and
the bugs in the version 1.03, I finally have it up and running.

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text
you can say "ha ha" and of course on voice you would sound like an idiot
if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

If you want to save money if you have a heavy piece of
equipment that has to go motor freight, use the following:

Tell them you are shipping used electronic equipment
under:

Class 62820-Sub 1, RVNX $3

The RVNX means "retail value not to exceed".

This worked for me when I shipped an R390 to St. Louis
some years ago and cut the shipping bill almost in half.

Well, folks, after monitoring the nonsensical gibberish that WA6VSE spews about for the last six month, I finally am forced to say something. This least thread about contesters being poor ops & wanting to 'crush the other guy' in an emergency communications situation obviously demonstrates that this gentleman knows NOTHING of what he speaks. Absolutely clueless.

Carl, you spend so much time ranting & crying on this newsgroup about things you obviously have not a clue about, it's no wonder you can't manage to pass the 13--takes practice time, y'know.

If you spent 5% of the time working on CW that you spend here whining for people to give you something you have not earned, you'd be at about 35 wpm by know. I wonder when you have even the time to turn on a radio, much less actually try to work towards an upgrade. Of course, that's probably the way you want it-blather on enough & sooner or later, maybe some one will give you something just to stop your incessant prattle.

I believe it's called being LAZY.

Oh, & BTW, why would such an experienced emergency operator such as yourself not want to learn the only true WORLD WIDE HF communications medium?

Please do yourself a favor & kick that brain in gear before you start typing. Better yet, don't type at all. All your arguments are tired nonsense. Go see a miovie or something.

Burt:

What is this thing you have against law-abiding gun owners? I suppose
you think the only people who should own guns are drug dealers,
gang members, and, naturally, the policemen who are standing 24-hour
guard over each and every citizen! I certainly you never have to look
down a gun barrel being pointed at you by a criminal in your own home.
I have, and its no fun!

Racist? Not hardly. What about the above post is racist? Let me give you a hint, being racist implys that I think my race is inherently better than another, that's a far cry from poking fun at Cutie Boys poor grammar and accent. It may be offensive, pehaps in poor taste for some, but definatly not racist. As far as the subject line, I consider this an internet newsgroup not ham radio. Comments shared here have little to do with what ham radio is today.

Chris my reccomendation is to shop the hamfests this summer and look for an old Heathkit you could find an oldCW transceiver for under $50, I can't remember the model number HW-16? I've seen several of them selling for around $30 or so, a basic CW transceiver that covers 3 or 4 bands. Find someone at the fest who can show you whats available.

Hi Pat,
I don't know. When I go into a ham radio equipment newsgroup I sort of expect to talk about radio equipment and not Scientology.

Likewise I don't go into a ham club meeting and expect to be able to start telling everyone about the virtues of basket weaving. Wrong place, wrong topic.....

Personally, I think that people who get hung up on the lingo used on the air by others need to get a life. Unless they are swearing so what? If you don't like their lingo then don't talk to them. (Hi Hi).

If you are passing formal traffic then you should use the accepted methods and procedures. If you are rag chewing then the fact that you slip in a HI HI or a dreaded Q signal on phone, so what?

There are a lot more important things to worry about in life than if someone on phone says HI instead of giggling.....

By the way: What is the proper way to type HI? Is it HI HI, Hi Hi, or hi hi? Does HI HI mean a belly laugh and Hi Hi mean a giggle and hi hi mean a half hearted snort? We must have a standard form so there will be no chance of any individuality after all..... (HI Hi hi)

A question for Burt. How does one call CQ on phone without using CQ. Calling all hams? Calling all cars? Talk about sounding silly.

I recall my Granddad, who was a railroad telegrapher, saying something about 73 being from a standard numbered message list that would be used to send common phrases. Sort of like the ARL standard message numbers used today. But then, they had to get the numbers to use from somewhere. I really would be interested in knowing where your source was.

| ANNOUNCING |
| |
| SOLAR WARNING AND REALTIME MONITOR (SWARM) |
| |
| EARLY WARNING SYSTEM |
| |
| VERSION 1.5 |
| |
-----------------------------------------------
```

Revamped Web Page at:
http://solar.uleth.ca/solar/www/swarm.html

****
** Save 33% if you don't own SWARM and order it now! **
** See the above website for details **
****

We are pleased to announce the release of Version 1.5 of SWARM. SWARM is the worlds leading and most sophisticated PC-based software for monitoring solar activity, space weather conditions, and geophysical activity in REAL-TIME. It will fetch, archive and display a prodigious amount of information as well as a large number of user-selectable audible warnings for such things as the impending Earth-bound impact of solar coronal mass ejection disturbances, energetic proton bombardments, increased geomagnetic and auroral activity, and MUCH more.

This software is being used in research activities as well as in amateur applications. Anyone requiring advanced and realtime notification and display of solar and space weather activity will benefit highly.

If you are new to SWARM, please check our web-page for a comprehensive list of features at: http://solar.uleth.ca/solar/www/swarm.html.

A few of the enhancements compared to Version 1.4 include:

* Full Compatibility with Windows NT 4.0 and Windows 98.
The software is also fully Windows 95 compatible.

* Now you can display National Solar Observatory (NSO) full-disk maps of coronal limb emissions in the Ca XV line. The NSO began providing this data on 20 April 1998 for the duration of the new solar cycle. Observations are made at the National Solar Observatory at Sacramento Peak with the Fisher-Smartt Emission Line Coronal Photometer (ELCP).

The Ca XV line is formed only near very hot active sunspot regions capable of producing temperatures near or in excess of about 3 million degrees Kelvin. It is therefore an excellent additional tool for determining the potential flare-volatility of active regions near the limbs of the Sun.

* Automated Upgrading.
You can use this version of SWARM to automatically upgrade to all future versions or revisions of the software. Simply click a button and SWARM will retrieve and install the latest version.

* More reliable Internet fetching.
SWARMs Internet Data Aquisition System (IDAS) has been revamped to provide full Windows NT 4.0 and Windows 98 compatibility as well as increased reliability of operation on Windows 95 systems for solid unattended operation.

* Better Internet Data Selection Interface
We have reworked the Internet Data Selection Interface. It is much simpler to use and now provides the additional ability to fetch data for any specified date.

* Solar Flux and Sunspot Number plots have been ammended to display the dates in MM/DD format instead of the Day Of Year format, which was more difficult to interpret.

* You can now display WIND/ACE spacecraft data in a 27-day screen format. That is, 27 days of data can be displayed on-screen at one time. This excellent new feature allows easy determination of potential recurrent periods of activity since the Sun completes one rotation every 27 days.

* SWARM is now compiled for Pentium-based Processors
Although SWARM will still function fine on 486-based machines, it will now perform even better on Pentium-based processors. The software now includes Pentium Instruction Scheduling, which will additionally improve performance on Pentium machines.

* SWARM is now also Windows Sockets Version 2.0 compliant.
This ensures the software will remain compatible with network protocols well into the future.

CURRENT OWNERS OF SWARM-PROPAK

The last major release of SWARM was provided free of charge to all owners of SWARM having current versions of the software.

There is a small upgrade fee we are imposing for this new major release of Version 1.5. The fee is $30 USD is you own Version 1.3 or better. To upgrade from older versions, the upgrade fee is $100 USD. Please refer to the "UPGRADE ORDERING INFORMATION" section below for ordering instructions, address information, and FAXable phone numbers.

OWNERS OF SWARM-RADPAK OR SWARM-STORMPAK

We will no longer be supporting SWARM-RADPAK and SWARM-STORMPAK software, which were smaller subsets of SWARM-PROPAK.

To help people who own one of these two software packages to switch over to Version 1.5 of SWARM PROPAK, we are offering SWARM-PROPAK to these users at a special upgrade fee of only $50 USD. Please refer to the "UPGRADE ORDERING INFORMATION" section below for ordering instructions, address information, and FAXable phone numbers.

NEW OWNERS OF SWARM

New owners of SWARM are encouraged to check our web-page at: http://solar.uleth.ca/solar/www/swarm.html for complete details regarding the special SWARM purchase price. Order forms are also available there. If you don't have access to the world-wide web, contact Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu.

UPGRADE ORDERING INFORMATION

If you are interested in upgrading to this new release, please FAX or postal mail your request along with the appropriate payment in United States currency (in either check or VISA forms) to:

Solar Terrestrial Dispatch
P.O. Box 357
Stirling, Alberta
T0K 2E0
Canada

Or FAX us your upgrade request to either:
403-756-3008, or 403-756-2380

If you require the software shipped to you on-disk via postal air-mail, please include an additional $20 USD. If you require the software shipped to you on-disk via an overnight or second-day courier, please include an additional: $30 USD (to the U.S.), $40 USD (to Europe, Australia or New Zealand), or $50 USD (to South Africa). For other locations, please inquire by contacting: Oler@Solar.Uleth.CA or COler@Solar.Stanford.Edu.

Otherwise, all shipments will be provided via the Internet.

PLEASE INCLUDE YOUR E-MAIL ADDRESS AND YOUR SIGNATURE WITH ALL UPGRADE ORDER REQUESTS. If you are ordering using your VISA credit card, please make sure you include: CARD-HOLDERS NAME, VISA CARD NUMBER, CARD EXPIRY DATE, POSTAL MAILING ADDRESS, PHONE NUMBER, AND AN AUTHORIZED SIGNATURE.

** End of Bulletin **

I intend to replace some of the filters in my NRD535, so if anyone has the replacement Crystal filters for the 535 at a good price, I may be interested. I also have a 1.8khz filter for the NRD that I would like to exchange for for the 300hz, 500hz or possibly the 1000hz, so if you have these, but are mainly interested in SSB, please contact by email

Also wanted, the Bandwidth Control Board for the NRD535.
I am in the UK.

Regards,

Joe Kirlew

1336. ALERT: MAJOR SOLAR FLARE ALERT - 29 APRIL

Newsgroup: rec.radio.amateur.misc
Date: 1998-04-29 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <6i7ung$4ku14@mars.online.uleth.ca>
Source record: 173222
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,sci.astro,sci.astro.amateur

/\

MAJOR SOLAR FLARE ALERT

ISSUED: 19:05 UT, 29 APRIL

/\

* Moderate Impact Possible *

MAJOR ENERGETIC EVENT SUMMARY:

(All times are valid for the UT day of 29 Apr)

Flare Size: Class M6.89/3B at 16:37 UTC
Location: S17E21 (Region 8210)
Tenflare: 100 sfu at 17:10 UTC. Duration: 7 minutes
Sweeps: Unknown (too early)
SEC Start: 1606 UTC, SEC Max: 16:37 UTC, SEC End: 16:39 UTC

STD-Derived Flare Statistics:

BEGIN (XRAY) MAX (XRAY) END (XRAY) DURATION INTEG. FLUX SWF DUR.
------------ ----------- ----------- -------- ----------- --------
1611 (B2.6) 1637 (M6.89) 1731 (C9.8) 080 MIN. 0.139 J/m^2 067 min

NOTES:
The derived flare end-times above are not based on the half-power point system. For major M and X-class events, the ending time is determined when x-rays first drop below M-class levels. Integrated flux values shown are computed from the indicated beginning time to the listed ending time. SWF (Short Wave Fadeout) durations are based on the time x-rays spend above M-class levels and do not account for potential lingering ionospheric effects.

SYNOPSIS:

A major class M6.89 flare (large optical flare estimated as a 3B) was observed at 16:37 UTC. The optical counterpart is still in-progress. This ribbon flare spanned the predominantly north-south inversion line along the west side of the main spot. Fairly extensive post-flare loops were visible in off-band H-alpha imagery. A strong short wave fadeout was observed in conjunction with this event, affecting frequencies in up to about 15 MHz and lasting approximately 1 hour on frequencies near 10 MHz. Residual post-flare fading is in-progress.

This event was associated with a large halo coronal mass ejection. More details will become available over the next few hours.

Consult our Daily Reports for more details. You can subscribe to these reports via e-mail using the form at:

http://solar.uleth.ca/solar/www/sublists.html

Anyone can observe these significant solar events and the ensuing Earth-bound impacts in realtime using the software available at: http://solar.uleth.ca/solar/www/swarm.html

POTENTIAL TERRESTRIAL IMPACT ASSESSMENT:

The following tables depict the preliminary estimated potential for terrestrial impacts in various categories. These tables are valid only for the flare described and do not include assessments for previous influential flare events.

POTENTIAL MAGNITUDE OF DISTURBANCE

HIGH : 20 %
MODERATE : 40 %
LOW : 30 %
NONE : 10 %

OVERALL ARRIVAL PROBABILITY : 70 %

ESTIMATED WINDOW OF SHOCK ARRIVAL IF SHOCK ARRIVES

MINIMUM	EARLY	PREFERRED	LATE	MAXIMUM

(From my model airplane days) work out Ohm's law to get a resistor value that will use the required number of ma in 1 hour. Buy or scrounge such a resistor with a wattage value of twice what you need. Short it across the pack and count time for a little less than 1 hour. Charge pack fully. Repeat 3 or 4 times. Pack re-conditioned!

Oh, don't be such a hypocrite, Burt. "CQ" is also a CW-only prosign, but try to convince us you've never used it on HF phone. Do you really say "Hello All Stations" (the ITU equivalent of CW's "CQ") on phone?

I like the other fellow's claim that .... might have originally been transmitted .... (hee hee instead of hi hi).

Actually "73" was a term the old telegraph operators would use back in
> the old west days. It meant that they owned a Winchester 1873 rifle
> (their most prized possession) and that when they died they would give
> it to the other operator.

Another urban legend, I'm afraid (much like the new and improved origin of the word "ham" having to do with the first letters of some early amateurs' last names being made into a call sign). It's been pretty common knowledge for about a century that "73" came from the numbered list.

What for? How about not "modding" your radios?

If you really need to transmit on police frequencies, why not become a
Cop or a police dispatcher?

If you really need to talk to the pretty 16 year old at the McDonalds
drive through, why not just drive through and place an order?

Pretty soon the manufacturers will abandon the US market and the
legitimate amateur radio operators won't be able to buy a damn thing
because of all of the freaks that feel that they have to transmit on
every conceivable frequency.

Just look at the scanner market (cell blocked, and soon to be vhf low
cordless fone blocked, and 900 mhz cordless fone blocked, and public
service blocked, and...) and look at the latest amateur gear (i.e., the
yaesu ft-920). How long do you think the offshore manufactureres will
be willing to make US specific radios because of these freaks?

Keep putting up with "What the friggin MOD?" questions and you'll have your answer soon enough.

OK Sparks, HI HI comes from the same sort of mentality that will soon
bless us with the millenium bug (Y2K). Out of sheer laziness (or was it
efficiency?), the cw ops chose to eliminate the last "dah," much like
the early programmers encoded only the last 2 digits of the year.

Somehow, I think that HI HI will just die off with the Morse code,
causing no major problems. But the Y2K problem will have bankers
jumping out of windows again.

Regardless, we should stamp out extreme and bizarre efficiency wherever
it is found.

I am desperately in search of some 88mH (inductors) that the telephone companies used (or are still using?) and were referred to as "loading coils." I would like to acquire (buy, barter, whatever) some for a lab experiment here at the University of New Hampshire. The DCR of these is about 6 ohms. Anyone have any idea where I might be able to get my hands on some. I have not had any luck so far. Thanks, Chris.

Charlie;
I recall back in the late 50's and through the 1960's E.F. Johnson
produced a CB model which had 6 or 8 Xtal controlled "slots." the
model I owned was called a "Viking," and it was a decent little rig -
as CB's went at the time ... I was in the USN at the time, and recall
hooking it into a linear amp of some sort (military), patching it into
one of "my" large antenna systems in the Caribbean ... and blasting hell
out of the fishing fleets at the time ...
